

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PUBLISHERS' NOTE.

IN issuing a new edition of *Ohio*, it has seemed desirable to add a supplementary chapter dealing with the history of Ohio since the Civil War. This chapter has been written by Theodore Clarke Smith, Assistant Professor of American History in the Ohio State University.

4 Park Street, *March*, 1903.

IN HONOR OF
the Men
WHO FOUNDED THE TERRITORY NORTHWEST OF
THE RIVER OHIO, A. D. 1787.

CHAPTER I.

INTRODUCTORY.

OHIO — now third among the States in her strength of population — was admitted as one of the United States in 1803, and in the order of time, therefore, is seventeenth in the galaxy of the Union.

In the broad domain between the Ohio River, the Mississippi, and the chain of northern lakes known of old as the Northwest Territory, this State comprehends most of the space between the Ohio River and Lake Erie; and usually is estimated to be about two hundred miles square, an area of 25,600,000 acres. The Domesday-book, or tax duplicate of the State, for the year 1883, showed that 26,713,421 acres of land were returned in that year, to which the acres of the cities and towns should be added. The returns for the year previous were 25,507,981 acres, and those of 1884 were but 24,971,170; rendering it somewhat difficult to ascertain officially just how large a state Ohio is.

Its northerly extreme is at the northeast corner, close upon the forty-second parallel of latitude. Its most southerly point is in the bend of the Ohio River, opposite the boundary line between West Virginia and Kentucky, or about thirty-eight and a half degrees north latitude.

The landmark of the State is the ridge of hills dividing the basin of the Ohio from that of the great lakes. It begins east of Buffalo, and, following the general course of the lake shore, enters Ohio near the line between the counties of Ashtabula and Trumbull, thence extending diagonally south of west across the State. The contiguity of these basins is such that Lake Chautauqua, a feeder of the Ohio, is but nine miles from Lake Erie, and the heads of streams which flow into it are not more than three miles from that lake.

Lake Chautauqua is said to be 726 feet above Lake Erie; but as the Ohio River at Pittsburg is but 172 feet above that level, it would seem that this must be more nearly the height of Lake Chautauqua above the ocean. At the Muskingum the level of the Ohio at low water is eight feet below that of Lake Erie. At the Scioto it is ninety feet below the lake, and at Cincinnati 133 feet. The lake level being 564 feet above that of the ocean, the altitudes at these points will thus appear.

The State, therefore, lies in a zone and environments which, with other conditions to be men-

tioned, afford a double climate and temperature, signally favorable to a variety of soil and products. The summers of southern Ohio, and the winters in the northern part, are sometimes intemperate, but the spring and autumn, in both sections, compensate for the excess. The equable temperature which Lake Erie diffuses upon the adjoining country has proved of immense value to orchards, vineyards, and pastures, while in the southern part of the State these have suffered much deterioration in fifty years.

The geological formation of the State is most interesting, but cannot adequately be sketched in this narrow compass, and from recent developments will, perhaps, require to be reconsidered. The outcrop produces the elevated table land extending from Pennsylvania southwesterly toward the heads of the Scioto, Miami, and Auglaise rivers, crowned with broken hills, which, according to railway and geological reports, rise in Richland County to an elevation of 802 feet, and in Logan County 773 feet above the lake level, or 1,366 feet in the former, and 1,337 feet in the latter, above the ocean. These, if correct, are the highest points in the State, though not so reported in early times.

The water-shed, thus traversing the State, has divided the rivers uniformly into a course northwardly to the lake or southwardly to the Ohio; of incalculable advantage in the early growth of the country, when these waterways were almost

the only channels for transporting its heavy productions to a market. Their heads are so closely interlaced in the highlands, that the Indians and early traders easily transferred their light canoes from one to the other. The great valley of the Maumee, or Miami of the Lakes, and those of the Sandusky, the Cuyahoga, and several lesser streams, drain the northern part of the State into Lake Erie and the St. Lawrence. The Mahoning, Muskingum, Hocking, Scioto, and the two Miamis carry off the waters of a larger surface to the Ohio and the Gulf of Mexico. These latter streams were once so considerable that, in the freshets, valuable cargoes of provisions were sent regularly to New Orleans in the Kentucky boats better known as the flatboat, and in keel-boats. In the early period there was a confident theory that the streams increased as the country was settled. It seems many severe droughts had occurred. The mouth of the Little Miami, as General Butler reported in 1783, was literally dried up. Captain Trent related that in crossing over from Mad River to the mouth of the Scioto River, in 1752, his horses and dogs died of thirst, not a stream or spring being found. But time has reversed the theory. Of all these rivers, the Maumee barely holds its own.

This happy intervening of rivers, valleys, and uplands, with a soil nowhere sterile, but generally rich or fertile, covered with forests or open woodlands, and spreading out in many parts into

savannas or natural meadows, formerly known as prairies, wet or dry, struck the hardy pioneers as a land made for their happiness, and unhappily, also, as being entirely insufficient for them and the natives both. The dry prairies, such as the Pickaway Plains, were prolific of crops. Wet prairies were found here and there in all parts of the State, but most extensively in the central and northwest quarter. They were luxuriantly clothed in grasses, wild rice, and flowering plants, changing with the seasons, and of gaudiest hues. Clumps and groves of the black-jack were interspersed, like islands, through their flat and ocean-like expanse. Beautiful as they were, their features were often tiresome to the traveler, who, after his day's journey through the soft mire, fancied in looking around that he was just where he had started in the morning. The southeastern quarter of the State, on the contrary, is serrated with hills, and though not so fertile contains hidden treasures of mineral, which in later days have justified its settlers as wiser than they knew. All parts of the State were peculiarly rich in game. The river, the lake, and the inland combined to form a country which the red man and the white alike admired and coveted as a garden of delights. No wonder that the savage died rather than yield it; no wonder that enterprising spirits in the old settlements were eager to enjoy a land so attractively pictured by all who came back from it; the more the pity that, between

these conflicting passions, justice and mercy could not have upheld the pious Moravians in their effort to devise a way for an equal enjoyment by both. But as this was not to be, we shall find nature's bounteous gifts enhanced to the white race by the wisdom of Congress in the first laws which it impressed upon the new soil ; most vital of which was the great ordinance of 1787, and the provision inserted by Mr. Dane, almost fortuitously it seems, at the last moment of its passage, extirpating slavery, already introduced by the French, and dedicating the soil to the labor of freemen ; an edict by no means so highly prized among the early settlers as now.

Another measure, which added incalculably to this influence, was the law by which the public lands were sold in small tracts and at low prices by the government directly ; free from the exactions of speculators, who might have engrossed all for their own profit. It was, nevertheless, a circumstance of much import that, by the large grants of land previously conceded by the government to the holders of Virginia military certificates, and to the Ohio and the Miami companies, the first colonization of the State, in different quarters, by bodies of emigrants of several and distinct origins, imparted characteristics and peculiarities which even now strongly diversify the people of these different sections.

In less than a century Ohio has become more populous than all the thirteen colonies when they

declared independence. Such a growth would be marvelous but for the equal strides with which her sister states of the Northwest Territory are advancing under the same auspices and policy. But what renders the growth of Ohio phenomenal, as compared with these her sister states, is, that for forty years Ohioans have been largely an emigrating people. Vast numbers of them have, like their fathers, gone farther West for cheaper land and new homes, and Indiana, Iowa, Kansas, and the states on the Pacific contain well-nigh a million of the sons of Ohio or their descendants.

The city population has already outrun the ordinary proportion of the interior states. Besides Cincinnati, with an estimated population of 300,000, and Cleveland with its 200,000, there are fifteen cities having more than 10,000 each; chief of which are Columbus, the capital, Dayton, and Toledo. But the population and wealth of the State are still principally agricultural, and when the public lands shall ultimately be taken up, in the enormous market kept open by the emigrant and naturalization laws, the superior productiveness of the old territory of the Northwest, as a food-supplier, will probably be found unequalled by any portion of the continent.

The changes wrought upon the face of the country are equally striking. The Indian, notwithstanding the noble effort of the Moravians, has vanished. Not one of his villages is left. The great forests, the beautiful prairies, the flow-

ing rivers and their fresh springs, have shrunk away, and the farm, the village, and the city have so far supplanted them that already forestry associations are anxiously agitating measures to save what is left. Eighty-eight counties, each with its court-house and cluster of local institutions, divide and dot the administrative map of the State. The great national road, earliest link of Ohio with the Atlantic States, and two canals uniting the lakes and the Ohio, invaluable still, though attempts have been made to destroy them, were the early pride of the State. Then came the era of turnpikes, and this in turn was succeeded by the railway system, which, numbering more than a hundred companies, great and small, has rendered every county in the State accessible by rail. Among these railways are links in the vast trans-continental lines; pointing out the narrow belt between the Ohio and Lake Erie, at the Pennsylvania line, as the natural passage between the oceans.

The rise of Ohio, in less than a century, from these wilds, will be the subject of the following chapters. They will not form a mere chronicle of the changes which have occurred since the foundation of the State; rather, they are sketches interweaving with annals some account of the early combination of emigrants, events and incidents, which has led to the development of the State and the traits of its people, as they now present themselves. Such sketches may be con-

nected without being strictly continuous. The details, so abundantly supplied in the many local histories of the State, must necessarily be restricted by the proportions of this volume. As a centenary memoir, its purpose is to set forth the foundations of the State rather than its full growth.

CHAPTER II.

THE WILDERNESS.

THE dawn of the history of Ohio appears about the middle of the last century. There are stories and traditions, and some imperfect relations of an earlier date, but they are too uncertain to be at all credible as history.

At that period the region now occupied by the State of Ohio, which has become the gateway to the great West, was an almost unbroken wilderness, without ruler or law, and tenanted only by the wild beasts or a race of wilder men. It was a vast waste of luxuriant nature, where, amid scenes apparently of primeval solitude, the explorer might have thought that war's invading foot had never trod. Wild and neglected as these solitudes seemed to be, there were visible monuments of a prehistoric age, and also buried relics of extinct races of men and animals. Throughout the eastern valley of the Mississippi, and to some extent west of it, there are huge works of men not only without a history, but of whom the red men first met by the Europeans had neither tradition nor legend. They were dwelling among these ruins without the least curiosity as to their builders. The keenest efforts of explorers to penetrate

their origin and antiquity are still baffled. The most remarkable works of the people known as the "Mound Builders" are probably to be found in Ohio; notably those in or near the valleys of the Miamis, the Scioto, and the Muskingum. It is supposed that ten thousand of them, large and small, are dispersed over the State. It is certain that some of them are not of the prehistoric age. Later races, and to some extent the modern Indians, have not only utilized the older mounds for burial purposes, but appear to have constructed some for themselves. A difference is observed, also, between the lighter forms of embankment, in the works near Lake Erie, and the heavy and more elevated ramparts in the middle and southern parts of Ohio. This has led to the conclusion that the former, which are found also in New York and further east, were the base of stockade forts built by the later races. The extensive lines at Newark and Portsmouth, each of which amounts to about fifteen miles of lineal embankment, and the heavy works at Fort Ancient, Circleville, Chillicothe, and Marietta, though not so extended as the former, are the most important. Military men, such as General Wayne and General Harrison, were of opinion, however, that some of these works were built for enclosures rather than as fortifications.

The exploring party of Major Long to the St. Peter's reported a singular observation that in these ancient fortifications the ditch is found

inside of the rampart. They report that their examination of Fort Necessity, the little earth-work thrown up by Major Washington in his first encounter with the French and Indians in 1754, showed this peculiarity, and hence was inferred to "comport better with Indian warfare." Bishop Madison, a diligent inquirer into these ancient works, regarded this peculiarity as proving that they were not for military purposes. Colonel Whittlesey, in his survey of the works at Newark, found a circular embankment twelve feet high, with an interior ditch seven feet in depth. The ditch inside of the parapet, he stated, is not uncommon.

The mounds are the most numerous as well as most promising objects for exploration. It is to their contents, mainly, that researches as to the key or clue to the mysterious builders must be directed; and they are various, not only in their forms and dimensions, but in the purposes which they are supposed to have served. Some, like those at Cahokia and Grave Creek, are of huge proportions, the former having a base of six acres and height of ninety feet, flattened at the top to a platform of five acres. Some are sepulchres; others were used for altars or religious rites; those of a truncated form, or terraces, are supposed to have been for residences; and many are extended on lines, or in an order, indicating that they were connected with defensive works, as advanced posts or signal stations.

There has been little discrimination in the claims made for the antiquity of all these works, but even as to those agreed to be the most archaic there is much dispute. Judge Force, who has diligently studied the various hypotheses, is inclined to consider the lapse of a thousand years sufficient to explain all the possible conditions for construction which have been presented. The absence of all history or trace of the people who constructed them he does not regard as significant, inasmuch as it would be entirely accounted for by the successive annihilation of each other by transient tribes or nations sweeping over the continent, and that a few centuries only would suffice for complete obliteration. A simple circumstance referred to by him disposes of the argument drawn from the existence of the aged trees surmounting many of the mounds and embankments. No little hillocks are found at these spots to indicate the uprooting of an older growth of trees prostrated either by storms or the decay of age.

- Until recently, the labors of antiquarians had unearthed little save bones and ashes of the dead, flint and stone implements, shells and rude pottery, denoting remains of a people superior in some respects, perhaps, to the modern Indian, but not so much advanced as the Mexicans, or even as the Natchez, who are supposed by some to be their relicts. Copper utensils and ornaments, some of them plated, had also been found,

and the best of these are said to be in the collection of the Historical Society of Wisconsin.

The recent systematic researches of the Peabody Museum of Archæology at Cambridge, Mass., have been rewarded with richer and more important revelations as to the lost race than any which had previously been brought to light. As a result of the explorations by the Museum staff and some local *savans*, mounds in the northeast part of Hamilton County, near Cincinnati, have been found to contain, besides human remains and implements and pottery of the common sort, a deposit of thousands of small pearl beads, and, what is esteemed of higher significance, "masses of iron," manufactured and unmanufactured. This discovery, and the treasure trove thus exhumed by superior skill under the very eyes of the people of Ohio, and now to be taken away from them, are of sufficient interest to justify a full extract from the report of Mr. Frederick W. Putnam, curator of the Museum : —

"On the estate of Mr. Michael Turner, in the northeastern corner of Anderson Township, near the Little Miami River, is a group of earthworks which has proved to be in several respects the most important and interesting of the many which have been investigated in Ohio. The whole group embraces thirteen mounds and two earth circles, all of which are enclosed by two circular embankments, one of which is on a hill and is connected with the other by a graded way. Several of the mounds contained altars or basins of burnt

clay, on two of which there were literally thousands of objects of interest. Two of these altars, each about four feet square, were cut out and brought to the Museum. Among the objects from the altars are numerous ornaments and carvings unlike anything we have had. One altar contained about two bushels of ornaments made of stone, mica, shells, the canine teeth of bears and other animals, and thousands of pearls. Nearly all these objects are perforated in various ways for suspension. Several of the copper ornaments are covered with native silver, which had been hammered out into thin sheets and folded over the copper. Among these are a bracelet and a bead, and several of the spool-shaped objects which, from discoveries made in other mounds of this group, I now regard as ear ornaments. One small copper pendant seems to have been covered with a thin sheet of gold, a portion of which still adheres to the copper, while other bits of it were found in the mass of materials. This is the first time that native gold has been found in the mounds, although hundreds have been explored, and the small amount found here shows that its use was exceptional. The ornaments cut out of copper and mica are very interesting and embrace many forms: among them is a grotesque human profile cut out of a sheet of mica. Several ornaments of this material resemble the heads of animals, whose features are emphasized by a red color, while others are in the forms of circles and bands. Many of the copper ornaments are large and of peculiar shape; others are scrolls, scalloped circles, oval pendants, and other forms. There are about thirty of the singular spool-shaped objects or earrings made of copper, like the two described in the last re-

port. Three large sheets of mica were on this altar, and several finely chipped points of obsidian, chalcodony, and chert were in the mass of materials. Several pendants cut from micaceous schist are of a unique style of work. There are also portions of a circular piece of bone, over the surface of which are incised figures, and flat pieces of shell similarly carved. Several masses of native copper were on the altar.

“ But by far the most important things found on this altar were the several masses of meteoric iron and the ornaments made from this metal. One of these is half of a spool-shaped object or ear ornament, like those made of copper with which it was associated. Another ear ornament of copper is covered with a thin plating of the iron, in the same manner as others were covered with silver. There is also a folded and corrugated band of iron, of the same shape and of about the same size as the band of copper found in a mound in Tennessee, and figured in the last report. Three of the masses of iron have been more or less hammered into bars, as if for the purpose of making some ornament or implement, and another is apparently in the natural shape in which it was found. As all these iron masses were exposed to great heat on the altar, they have become more or less oxidized; and two of them were so much changed in external character that several good mineralogists, as well as myself, mistook them for limonite, or bog iron, which had probably formed since the mound was erected. The discovery of iron in the mound was of course a matter of great interest, from whichever side it was viewed, and it was therefore a matter of the first importance that its character should be accurately determined. For this

purpose I have been fortunate in securing the coöperation of Dr. L. P. Kinnicutt, assistant in chemistry in Harvard College, who has become much interested in the work, and has made careful analyses of all the masses and objects of iron. Dr. Kinnicutt has found that each and all contained nickel, and that all the iron is unquestionably meteoric. As this is the first time that objects made of meteoric iron have been determined from the mounds, it is of great interest, and it will now be necessary to examine anew the statements made by Hildreth and Atwater in relation to the traces of iron which they found in mounds in Ohio over sixty years ago.

“It is worth recapitulating here that native gold, silver, copper, and iron were all found on the altar of the large mound in this group, and that all were manufactured into ornaments simply by hammering. A mass of lead ore, galena, was found in another mound of this group. On another altar, in another mound of the group, were several terra-cotta figures of a character heretofore unknown from the mounds.”

This discovery suggests possibilities which may prove marvelous. The prodigious number of pearls found in this tomb, the tomb probably of some grandee, would be incredible were it not that larger and finer specimens have been taken from the Little Miami River. But vastly larger numbers were plundered by De Soto from the graves at Cutifachiqui (Savannah river), said by the Gentleman of Elvas, a veracious man, to have amounted to “fourteen arrobas (three hundred and ninety-two pounds), and little babies and

birds made of them," a point which may have some bearing upon the Peabody discovery. The pertinent question, however, is not so much as to the numbers, but how the perforation of the beads was accomplished. Were the lapidaries, whose wheels and drills did such cunning work, of the same race as the builders of the mounds?

Whence or whither these people proceeded is an unsolved problem. From the concentration of the heavier and apparently more military works in southwestern Ohio, we can conceive that here they finally encountered the foe, equally obscure, who overwhelmed them. Extinction seems to have overtaken both alike. The subject admits of such an infinite deal of conjecture and credulity, that for the present it must be relegated to a place with the unknown status of the "Ice Sheet" and "Boulder" periods in Ohio history.

Still another mystery of the wilderness remains in the traces of the huge beast described by Cuvier as the *Mastodon giganteus*, and by Buffon as the *Mastodon Ohioticus*, though designated also by the latter as of the mammoth species. The most noted trace of this creature is at Big Bone Lick, a salt lick or spring in Kentucky, situated near the Ohio River, and about twenty-six miles below the Big Miami. The great deposit of bones found imbedded in the mud at this spot suggests that it may have been the meeting-place for terrific battles as well as refreshment, though

possibly these are remains of the sick rather than of the vanquished. Explorations and removal of the bones preserved in this mineral soil were made at an early period. Longueil, the French commander at Detroit, sent one of the tusks to Paris in 1739. Captain Gist, in his exploration of Ohio in the winter of 1750-51, obtained two jaw-teeth, each more than four pounds in weight, and like fine ivory when cleaned. Robert Smith, a trader with whom he lodged at the Tawighti fort (Piqua), had found them seven years previously at Big Bone Lick, and assured Gist that the rib-bones of the largest of these animals whose remains he found there were eleven feet in length, and the skull six feet in breadth across the eye sockets. Several of the horns, as he styled the tusks, were more than five feet in length and as much as a man could carry. The French Indians, he reported, had taken away many of these remains. George Croghan, the Western deputy of Sir William Johnson, and also Captains Hutchins and Gordon of the British army, distinguished as Western geographers, all visited the place before the revolutionary war, and from their reports and specimens the scientific men of Europe derived their principal information.

The immense proportions of the skull described by Smith to Gist are confirmed by the size of tusks found elsewhere, and much larger than those which he has reported. Several have been unearthed in the deep gravel bed on which part of

the city of Cincinnati is built. The largest was exposed in excavating this bank for the building of a public school house, on the north side of Third Street, between Elm and Plum streets. It was ivory-like, slightly curving towards a point, and almost perfect as it lay horizontally in the gravel, about twelve feet below the surface. Both ends were worn off by percolation. What remained was fully seven feet in length, and the lines, if produced, would have extended it to nine feet. Being saturated with water, and unskillfully handled, this rare and valuable specimen fell to pieces before getting into proper hands.

Descending to the times when the history of Ohio begins to emerge, in a fragmentary way, it would seem that late in the seventeenth century, or early in the eighteenth, the Indian tribes had become distributed through the country now comprised in Ohio in about the following ranges: The part east of the Muskingum, together with the country on the upper Ohio and Alleghany rivers, was held by the Mingoes (Senecas). The Wyandots (Hurons), after being driven from the St. Lawrence across upper Canada to the northwest and then back again, had seated themselves opposite Detroit, but a large body of them had also taken their abode on the Sandusky River, extending as far as the Scioto; and at the time of Gist's tour had their chief village on the Tuscarawas, near its junction with the Wahlhonding. Certain clans of the Miamis, known then as the

Twightwees (*Tawightis* or *Tawixtis*), probably Piankeshaws and Ouiatanons (*Weas*), extended across from the Wabash to the upper valleys of the Big and Little Miami rivers, having a fort and large town on or near the present site of Piqua. The Shawanees were on the Ohio, Muskingum, and Scioto, their chief town being on both sides of the Ohio, at the mouth of the Scioto. The Delawares at this time were scattered among the Mingoes, Shawanees, and Wyandots. There were Kickapoos, and bands of Northwestern Indians, Pottawatomies, Ottawas, and Chippewas in villages on the Maumee. There were also small detached bands or villages of Cherokees and Caughnawagas; the former in Ross County, the latter in the Western Reserve.

These were the local tribes, but none of them were indigenous. There was a theory, presently to be explained, that all of them were admitted to this region by permission of the Five Nations. The latter had not yet become Six Nations; the Tuscaroras not being incorporated with them until about the year 1713. The Mingoes were not a nation, but refractory wanderers or outlaws of the Five Nations, chiefly Senecas and Cayugas; the Senecas being the western flank of the Five Nations, and extending from the Genesee to the Alleghany River. These borderers became known as the Mingoes; a name of bad repute, as readers of the *Leather Stocking* tales will remember, and derived from *Mengwe*, an appellation given by

the Dutch to the Mohawks or Maquas, and collectively to the entire confederation. Soon after Gist's tour, the Wyandots withdrew from the Muskingum in favor of their grandfathers, the Delawares. These were to have been blessed, in their new home, by the civilizing power of the Moravians, had fate so permitted it to be. The Shawanees, in like manner, were let into the upper valley of the Scioto, and thus around to its headwaters and the beautiful plains between these and the upper branches of the Little Miami.

Prior to the period of this occupation, it is to be gathered from the French *relations* that two powerful nations, the Eries (or Chats, as styled by the French) and the Andastes, held the entire country south and west of the Five Nations; extending on Lake Erie from the Sandusky eastward to the mountains, and perhaps to the Susquehanna. Between them and the Five Nations long and bloody wars were kept up with varying issues; the latter at one time, it would seem, being nearly overcome. But it is all vague. The only authentic fact known is the statement of Father Lemoine, that the Iroquois (Five Nations), at his "council of peace" with them in August, 1654, were in deep lamentation over the death of their great chief Anencraos, who had been taken prisoner in the new war they were then waging against the Cat Nation. About the year 1660 it is supposed the Five Nations, by a rapid invasion, surprised and drove the Eries into their fortifica-

tions, somewhere in northeastern Ohio or Pennsylvania, and carrying it by storm exterminated the warriors, and, in the happy manner which they had of reinforcing themselves, took off and adopted the women and children into their own tribes. The Andastes, who are supposed to have occupied western Pennsylvania, were conquered and disposed of not long afterwards in like manner. This dominion of the Five Nations, of whom the Senecas were the most numerous, now became extended down the Alleghany and Ohio rivers to the Muskingum, actually and beyond dispute.

This deadly war, and its consequences, acquired an important bearing upon the subsequent disputes as to which of the European powers had rightful dominion of the country out of which Ohio was formed. Toward the middle of the eighteenth century, the English cabinet awoke to the importance of the trans-Alleghany region, and the advantage which the French had been quietly gaining by their rapid process of preoccupation. It suited their purpose, therefore, taking counsel from Sir William Johnson and Governor Pownall, two of the most intelligent and vigorous of their colonial agents, to set up the claim that the Iroquois, or Five Nations, were the conquerors and masters of the country north of the Ohio as far west as the Mississippi; and as these conquerors had acknowledged themselves subjects of Great Britain, and were expressly recognized as such by France in the 15th Article of the Treaty of

Utrecht (1713), that power had an actual paramount title and possession which defeated all the pretensions which France had set up through her little colonies and trading-posts at the West. Upon the question there was a long diplomatic contention, theory against fact, in which neither party would yield. On this side of the Atlantic, Governors Pownall, Colden, and De Witt Clinton strenuously maintained the New York or English claim, but were ably controverted by General Harrison, Dr. Daniel Drake, and half and half by Butler in his "History of Kentucky." Finally the question was renewed in Congress when the cession by New York was asserted to have given the United States a title in the Northwest Territory superior to the claim of Virginia. This obdurate dispute, although put an end to by the cession made by Virginia, has an historical interest, if nothing more, of some concern to Ohio.

It is to be observed that none of the tribes occupying the Ohio country in the last century, not even the Mingoes, conceded the claim thus set up by England on the ground of the Iroquois conquest. This presents a puzzle which I propose to examine in a further chapter. The unhappy consequences of the treaty of Fort Stanwix in 1768 sufficiently attest this. The defiant claim of the tribes from that time was, that the land was theirs, not by permission of the Five Nations, nor by that of the whites under their imaginary dominion by discovery, — a title always incompre-

hensible to the Indians. They were the foes who for nearly thirty years barred the Ohio River by an unrelenting and bloody war upon the pioneers of Kentucky and the Northwest. This barrier neither treaty nor force could remove until it was swept away by General Wayne and his irresistible legion.

Numbers of white people, it must be noted, had early in the century, and long before this outbreak, become dispersed among the Ohio tribes in various ways and with diverse fortunes. First of all were the French traders, the *coureurs des bois*, the stragglers and deserters who drifted on the Maumee, the Sandusky, and perhaps the Cuyahoga. They left no annals nor trace, unless it be the axe-marks upon trees, or the rusty relics of guns and skillets, which occasionally puzzle the antiquarians on the lake shore. There were many refugees also who had left the settlements under a cloud, and some of these renegades became the most ferocious enemies of the early settlers. More than all were the captives, white and black, who had been spared from the stake and adopted as members of the tribes. Two of these are especially known,—the “white woman” after whom the Wahlhonding originally was named; and Colonel James Smith. The former is introduced to us by Captain Gist as Mary Harris, captured in New England, when a child, by the French Indians, and with her Indian husband and children brought in their migrations to the

West. "She remembers," says Gist, "they used to be very religious in New England, and wonders how the white men can be so wicked as she has seen them in these woods." Colonel Smith was captured in boyhood, near Fort Duquesne, and brought up among the Indians in northern Ohio. His account of his captivity and life among them, their customs, manners, and character, is probably the most truthful, intelligent, and interesting narrative ever written on the subject. It is an admirable picture of the Indian at home, or in repose.

In the curious fusion of the whites with the Indians which was going on at this early period, there were hermits also; people who sought the wilderness for quiet or seclusion. They were not only unmolested, but were treated by the red men with superstitious regard. A wandering, kindly specimen of this sort was John Chapman, or Johnny Appleseed, as the early settlers named him, who came to the Muskingum late in the last century, and spent his time chiefly in scattering nurseries of apple-trees about the country for the benefit of the coming people. Indians and whites equally respected his quaint, inoffensive life and ways. With nothing but his axe and bag of appleseed, or sometimes, as the settlements grew, a few Swedenborgian tracts, he made his pilgrimages far into the wilderness, where he cleared or deadened spots in the woods, in which he sowed his seed, and surrounding them with hedges of brush,

to keep off the deer, left them as gifts to those who should follow. Many an orchard far out in the Firelands, and at the heads of the Scioto, the Miamis, and the Wabash, was planted from these seedlings.

Two interpolations, apparently, have worked themselves into current histories of the early Indian age for which it is difficult to find any original authority. One relates to a victory supposed to have been gained by the Iroquois, in a great battle fought in canoes on Lake Erie, over the Hurons, according to one theory, but by another over the Miamis. The other of these apocryphal reports represents the Shawanees as having been originally occupants of the country on Lake Erie, and driven thence by the Iroquois in the sixteenth century. That was the period, according to the French *relations*, when the Eries, or Chats, occupied the country and were exterminated by the Iroquois. The Shawanees claimed, moreover, to be a southern people, and certainly had strong marks of such on origin. At the time when they are thus supposed to have been driven from Lake Erie, they were slowly moving northward from Georgia or Florida. One body of them was found by La Salle in 1682 on the Wabash; another, about the same time, was inhabiting the lower country between the Delaware and Susquehanna, and was supposed to have come northward along the east side of the Alleghany Mountains. But, recurring to the western migration of the whites, it

will probably be found that it was much anterior to the period which is usually reckoned in our histories. The "first-born white child" was much earlier and more numerous in Ohio than the antiquarians and centennial orators allow.

CHAPTER III.

UNDER WHICH KING?

IN the days of its subjection to European sovereignty, Ohio formed but an indistinct part of the trans-Alleghany wilds, which for a century were assumed by England, France, and Spain each as belonging to their dominion.

According to our historians and jurists, all English proprietorship in America is traced so implicitly to those famous and inexpensive charters which the kings of England, in the seventeenth century, lavished upon their courtiers and other loving subjects, that it seems profane to doubt them. But the charters themselves, like the elephants which in the ancient cosmogony upheld the corners of the world, require some support. And it may be seriously doubted whether an altogether undue importance has not been given to the British claim of dominion over North America through the discovery by the Cabots. It has been wrapped in chapters of verbiage, but the whole story, or the kernel of it, is contained in a single passage from Ramusio, in which Sebastian Cabot is introduced as saying that having been stopped by an "island, and not thinking to

find any other land than that of Cathay, and from thence a way to India, I sailed on to the north, to see if I could find any gulf turning in that direction." Then follows the discovery.

"Sailing along the coast, I found the land still continent to the fifty-sixth degree under our pole. And seeing that there the coast turned toward the east, despairing to find the passage, I turned back again and sailed down by the coast of that land toward the equinoctial (ever with intent to find the said passage to India), and came to that part of this firm land which is now called Florida, where my victuals failing I departed from thence and returned into England, where I found great tumult among the people, and preparation for the wars in Scotland, by reason whereof there was no more consideration had to this voyage."¹

It is surprising that the "gift of a continent" should have rested upon a foundation so weak and slender. The United States might assert a far more plausible sovereignty over the "Antarctic continent" which was discovered in 1840 by the exploring expedition under Commodore Wilkes. Eighty years elapsed before Queen Elizabeth's patents were issued to Gilbert and Raleigh, of which nothing survived but the name of Virginia, and the introduction of tobacco into England. No possession of the English was established until the charter of King James which was granted in 1606 to the London and Plymouth companies, and was followed in 1609 by the great patent under which the region northwest of the Ohio River was assumed to be within the chartered limits of Virginia. This was taken to be accomplished by its

¹ Biddle's *Memoir*.

boundary on the Atlantic, "and thence extending from the seacoast of the precinct aforesaid up into the land throughout, from sea to sea, west and northwest."

How little the king and the crown officers knew of the land which they were pretending to parcel out, appears not only from the vague and senseless boundaries thus prescribed, but even more from the fact that Captain John Smith, with all his geographic lore, went up the Chickahominy to find this western sea, and that so intelligent a man as Governor Spotswood, a century later, fancied that he had descried the Ohio River from the summit of the Blue Ridge.

These circumstances indicate how blindly England and her colonists were groping their way into the back country, which, before their eyes were opened, other nations and more searching and active adventurers had explored, and to a large extent appropriated its possession and enjoyment.

The charters, however, though they could not grant what the king did not possess, had this virtue: they were a license to explore, and gave title to the discoveries made, so far as occupied, but no more. Tried by this principle, neither Great Britain nor her colonies had, in the seventeenth century, acquired any pretensions northwest of the Ohio River by right of discovery or by charter. In the next century her statesmen constructed another title through what was denominated the Iroquois Conquest.

De Soto, though not the discoverer of the Mississippi, was the first of the Spanish captains who acquired a hold upon it. Starting from Tampa with six hundred and twenty men, he had been marching and counter-marching two years through the country, northward and westward, when in April, 1541, he suddenly came upon the great river, somewhere, probably, near Helena. He crossed, and after marching another year through Arkansas or southern Missouri, fighting incessant and inhuman battles with the Indians, and struggling against climate, swamps, starvation, and disease, with a fortitude almost superhuman, he was driven back to the river. Crippled as he was, he might have made himself master of the Mississippi. Had he but known his opportunity, Spain would have gained the prize which two centuries later she coveted in vain. But overcome with hardships, and in a fever of remorse for the peril into which he had drawn his men, he died there. Wrapped in a winding-sheet filled with sand, his body was sunk in the Mississippi at night, to conceal from the savages that the "Child of the Sun" was mortal. It was fitting that the monster river, which might have been his glory, should thus swallow up the man who had contemned its power. So ended the only effort of Spain in that century on the Mississippi.

To finish at once with her subsequent pretensions, when Spain acquired the territory west of the Mississippi by gift from France in 1763, she

kept a jealous eye thenceforward upon the eastern valley. She most ungenerously demanded, as a condition of joining the alliance with France to support the war for American independence, that the United States should renounce any attempt to acquire the Mississippi, or the territory west of the Alleghany Mountains. Foiled in this, she sent an expedition in 1781 from St. Louis, which captured the little British fort at the mouth of the river St. Joseph's, in Michigan. In the negotiations at Paris in August, 1782, for the treaty of peace and independence, the Count D'Aranda, on the part of Spain, objected to the demand of the United States for the boundary of the Mississippi. He asserted that, by the conquest of West Florida and the British posts on the lower Mississippi and in Illinois (St. Joseph's), the river had passed to the Spanish arms. He then proposed a line from Florida to the mouth of the Kanawha River, thence to extend across Ohio to the west end of Lake Erie and up the lakes to the head of the Mississippi, as the western limit of the United States.

This critical negotiation, and the skillful manner in which the duplicity of the Spanish and French ministers was baffled by Messrs. Jay, Adams, and Franklin, need not be recounted. It is enough to say that the St. Joseph's was the nearest approach made by Spain to Ohio.

Far to the north, long before the commissions even of Gilbert and Raleigh were issued, the

French had penetrated the continent by way of the St. Lawrence. Cartier had sailed up to Hochelaga (Montreal) in 1534-35. De Monts, under a patent from Henry IV. in 1604, the first grant of American soil ever made, extending from the 40th to the 46th degree of north latitude, had settled Port Royal, now Annapolis, in Acadie. Champlain in 1608, acting for De Monts, founded and fortified Quebec, and soon afterwards was appointed vice-governor of the province of New France, the territory of which extended indefinitely up the St. Lawrence.

Here the way was traced which first led to Ohio. This faithful and untiring servant of the king, by his administration of thirty years, richly earned his title of the "Father of Canada." But unhappily for France, his first step was an error, which ultimately involved the loss of the French dominion in America. Finding his neighbors, the Hurons and the Algonquins, embroiled in war with the Iroquois or Five Nations, the powerful confederacy stretching from Lake Champlain to the Niagara River, he with a few of his musketeers accompanied the Hurons two successive years in raids up the Sorel and the shores of Lake Champlain. In these battles the Iroquois were dismayed and routed by the firearms now encountered by them for the first time. Numbers of them were slain or made prisoners and tortured by the exultant Hurons, in revenge for the cruelties long wreaked upon them by the ferocious

Iroquois. The latter cared little for the warriors lost, but these defeats were a blow to their prowess which they never forgave nor forgot. The deadly hostility thus engendered against the French rendered the Iroquois not only the allies and strong defense of the Dutch and afterwards the English of New York in the French and Indian wars, but, what is more to the present subject, they became an insuperable barrier between the French and the valley of the Ohio. In these wars, it may be mentioned in passing, they drove the Hurons from their country between the St. Lawrence and Lake Huron to the wilds beyond the northern lakes. Here again the Hurons were driven back by the fierce tribes of Sioux to the shores of Lake St. Clair and the Detroit River. Thence a large body of them who became hostile to the French migrated early in the last century to Ohio. From their original name of Wendats they became better known as the Wyandots.

For sixty years the French were shut off from the upper St. Lawrence and the Lakes Ontario and Erie by the incessant assaults of the Iroquois, their communication with the Northwest being restricted to the route by the Ottawa and Mackinac. The first glimpse which we get of the country south of Lake Erie is from the *relation* of a mission in 1654 by Fathers Dablon, Le Moine, and Chaumont among the Senecas, the most westerly of the Five Nations. At a "Council of Peace" held by Le Moine, the warriors were

mourning and he "wiped away their tears" for the loss of Annencroas, a great chief, in a war then raging between the Iroquois and the Eries or Chats, a nation occupying the country south of Lake Erie. Probably this fixes the period of the final struggle in which the Eries are supposed to have been exterminated, and the country between that lake and the Ohio River utterly depopulated and laid waste. As an incident in this mythic age of Ohio, we learn that the Eries were called Chats by the French, from wearing coon-skins, the raccoon being taken by the French for cats. This animal abounded on the shores and islands of Lake Erie.

Soon after the conquest of the Eries, the Iroquois suffered a terrible check from an invasion by the Marquis de Tracy and a large body of French regular and colonial troops. Their country was overrun, their towns were burned, and terms dictated by which the confederacy for a time was completely humbled.

At this time appeared the celebrated Robert Cavelier, better known as the Sieur de La Salle, who was to be the chief factor in opening and extending the French dominion over the lower lakes and the valley of the Mississippi. It were worth a chapter to follow his wonderful career, but a few incidents only can be referred to in connection with our subject.

In intercourse with the Senecas as a fur-trader, he heard of a river beyond their country (west-

ern New York) which they called the Hohio. "Following it seven or eight months," they told him, "one would come where the land was cut off," meaning that it fell into the sea. This to La Salle's ardent disposition meant the Vermilion Sea, and at once the way to China and Cathay flashed upon him and became the engrossing theme of his speculation. The Sulpitian fathers, Dollier and Galinée, were just starting upon a mission to the Ottawas. La Salle obtained leave to accompany them, and they consented to his request to go by the south shore of Lake Ontario, hoping that the Senecas would guide them to the Ohio. The wily Iroquois disappointed them, but the Indians at the west end of Lake Ontario were more ready. To their astonishment, at Grand River, on their way across to Lake Erie, they met with Joliet, the famous explorer, who, with Father Marquette, four years later discovered the upper Mississippi. He was now returning from the west by way of Lake Erie, being the first white traveler on its waters. This meeting resulted in the separation of the Sulpitians from La Salle, Joliet advising them that the spiritual wants of the Ottawas were a more proper object for them than the exploration of the Ohio. La Salle, discomfited and sick, returned as was supposed to La Chine, the name which the Montreal wits had derisively given to his establishment. The first effort for the discovery of the Ohio therefore failed. The rebuff of La Salle was followed by

his disappearance, or rather by a blank in his history for the next four years. It has been ingeniously surmised that he spent this interval in an expedition to the Ohio; and two anonymous memoirs recently found by M. Margry in the archives of the Department of the Marine and Colonies at Paris, which are published in his recent compilation of historical documents, support this theory. But whether La Salle ever explored or even visited the Ohio River is left in as much doubt as ever. His casual allusions to the Ohio, which these writers relate, rather tend to the contrary. The very fact that no report from La Salle himself of his discovery or descent of the Ohio has yet come to light, must be regarded as strong evidence that he was never there.

Two years later we find in the history of Virginia a similar failure of the English in approaching the Ohio. Captain Thomas Batts, with a party of English and Indians, was sent by Governor Berkeley in September, 1671, "to explore and find out the ebbing and flowing of the water behind the mountains, in order to the discovery of the South Sea." After a march of thirteen days from "Appomatok" through the forests and over steep mountains, they came down upon waters running west of northwest through pleasant hills and rich meadows. They encountered a river "like the Thames at Chelsea," and following its course came, on the sixteenth day, to "a fall that made a great noise," probably the Falls of Kanawha.

Here the journey ended, the Indians refusing to go further, under the pretense that they could catch no game on account of the dryness of the ground and the sticks; but really from dread of the tribes down that river, from whom, as they reported, travelers never returned. In the country below, they also reported, there was a great abundance of salt. His escort being unmanageable, Captain Batts was compelled to return. La Salle with such an opportunity would soon have found the Ohio River.

Ohio seemed unapproachable, and so far as can be inferred from its surroundings was, for the last forty years of the seventeenth century, a depopulated waste. The Five Nations, after overcoming the Eries, had carried their wars westward, scattering the smaller tribes and driving the Illinois Indians, as well as the Miamis and Shawanees, beyond the Mississippi. Flushed with these triumphs, they turned back upon the Andastes, in Pennsylvania, and about 1676 had extirpated them, destroying the warriors and amalgamating the women and children with their own people.

But during this contest it would seem the Miamis, Shawanees, and Illinois tribes were venturing back to their former positions. The Five Nations nevertheless boasted themselves the conquerors and masters of the West as far as the Mississippi, and by their victories over the Catawbas and Cherokees asserted a conquest also of Kentucky and West Virginia.

This summary will explain the politico-historical controversy referred to in a former chapter. Governors Pownall, Colden, and De Witt Clinton, also Sir William Johnson and Doctor Franklin, regarded the rights of the Five Nations to all the hunting grounds of the Ohio valley "as fairly established by their conquest in subduing the Shawanees, Delawares, Twightwees (Miami), and Illinois, as they stood possessed thereof at the peace of Ryswick in 1697." General Harrison, on the contrary, in a discourse before the Historical Society of Ohio in 1839, took issue with these distinguished authorities. Relying upon his long intercourse and acquaintance with the Miami and Shawanees, it was his conclusion, reviewing the whole mass of proof, that, without any reasonable doubt, "the pretensions of the Five Nations to a conquest of the country from the Scioto to the Mississippi are entirely groundless."

This conclusion was mainly based upon the immemorial possession by the Miami, as General Harrison conceived, of the country where he found them, extending from the Wabash to the Scioto. But a mine of information, since developed by the historical documents published under the auspices of the State of New York and by M. Margry, now proves a misapprehension as to the real history of the Iroquois conquest, on both sides, in this discussion.

There was a conquest extending to the Mississippi, but it appears that about the close of the

seventeenth century there was a total reversal, and that the Iroquois were driven back to their original confines by a combination of the Illinois tribes with the Miamis, the Shawanees, and other nations of the Northwest, effected by La Salle and his brave lieutenant, Tonti. La Salle was permitted by his allies to erect a fort far up the Illinois River in the winter of 1682-83, behind which the confederated tribes were rallied. At this the Iroquois took offense, and in March, 1684, during the absence of La Salle in France, again burst in fury upon the Illinois. They assaulted the fort (St. Louis) three times, but were repulsed. After a siege of six days they retreated, pursued by the Miamis and their confederates.

It was the first check they had suffered, and proved their last appearance in Illinois. Their expeditions westward fell back year by year. The Miamis and the Shawanees, as well as the Ottawas and Pottawatomies, steadily gained upon them and moved their villages eastward, till the hatchet was buried finally at the great assembly of Indian nations gathered by De Callieres in 1701 at Montreal. From that time the Five Nations, potentially, lost their hold of the country west of the Muskingum. The Miamis and the Shawanees had already advanced into Ohio from their original country between Lake Michigan and the Wabash.

But just as the power of the Iroquois was wan-

ing the hand of England began to be shown. Colonel Thomas Dongan was the first of the provincial governors who pursued an aggressive policy against the French at the West, and really originated the pretension, afterward so boldly pressed by the English, that their sovereignty and title extended wherever the Five Nations had carried their conquests. Though he was a Roman Catholic, he prohibited the French missionaries from residing among the Five Nations, to stop their intrigues. He brought matters to an issue by encouraging the New York traders to insist upon the right of trading up the great lakes, where for more than twenty years the French monopoly had been undisputed.

In the summer of 1686 the traders made the experiment, with good fortune, reaching Mackinac while Durantaye, the commandant, and his garrison were absent on a military expedition. Their cheap goods and large stock of rum captivated the Chippewas so that they swept the market of its furs, and retired before Durantaye appeared. This lucky venture turned the heads of the New Yorkers, and a still larger convoy started the next year under the governor's patronage, Major Patrick McGregor and a party of soldiers being sent as a guard. The boats passed up Lake Erie, divided into two flotillas, a week or two apart.

But the French had been aroused by the subreptive performance of the year before, and also

by another raid threatened by the Iroquois at the west. Early in the year Denonville, the governor-general, had issued orders to Durantaye, Tonti, and Du Luht, commanding the western tribes, to concentrate their warriors at the Niagara River in July, and join him and the French troops from the St. Lawrence in a sweeping invasion of the Five Nations. In this movement Tonti and his Illinois force, as the right wing, were to have passed up the Ohio River and attack the Senecas in the rear. Before they got into motion the approach of six hundred Senecas was reported, and the Illinois refused to leave their fort and villages. The Senecas, equally alarmed by their discovery of Denonville's plan, also fell back.

Denonville's campaign was successful. But Tonti, when he found that his force was unequal to the part assigned to him, marched directly to the Detroit, to unite with Durantaye and Du Luht at the post which the latter had established at the head of the straits. In this way Major McGregor and both his flotillas fell into the hands of the French, one being captured by Durantaye, a little below Mackinac, and the other intercepted by Tonti at or near the west end of Lake Erie. McGregor and his men were taken to Denonville as prisoners, the traders and their cargoes delivered over to the Indians for plunder.

This was the first collision of forces between the French and the English at the west, and for the time was fatal to the pretensions of Great

Britain in that quarter. This, followed by the assembly and general pacification of the Indian nations by De Callieres at Montreal, and the consolidation of the French power on the Mississippi, Ohio, and Wabash rivers effected by D'Iberville, Bienville, and Tonti, gave to France at the close of the seventeenth century the mastery and exclusive sovereignty of the whole country watered by these rivers and the lakes of the north.

The position of Ohio in this course of events is obscure, for the reason already indicated. For forty years or more, darkness visible hung over the beautiful region lying fallow between the lake and the Ohio. The most that can be gleaned from relations and documents thus far disclosed is, that about the beginning of the eighteenth century the French traders and *coureurs de bois* were pitching their habitations along the south shore of Lake Erie and up the valleys of the Sandusky and Maumee, on their way to the Wabash ; but apparently there was no French settlement, mission, or post formed within the borders of Ohio. The post of which Courtmanche was put in command by Frontenac in 1691 was not at Fort Wayne, but at the mouth of the St. Joseph's, where the French endeavored to confine the Miamis. Except Du Luth's post at the head of the Detroit, there was no establishment in or near Ohio until Fort Pontchartrain and the colony at Detroit were founded by De Callieres, in spite of the displeasure of the Five Nations and

the English, and built by Cadillac in 1701 by his order. The Maumee, the Sandusky, and the territory down to the Ohio thenceforward became dependencies of this centre.

This aggressive step of the French in fortifying the Detroit, and subordinating all the country south of that post, moved the Five Nations in alarm to surrender to the English the title which they claimed to the western country. Nanfan, the governor of New York, and Robert Livingston, the secretary, after a week's conference with the sachems at Albany, obtained a deed of cession July 19, 1701, by the Five Nations to the king, transferring to him as their defender and protector all the beaver-hunting lands at the West, described as having been conquered by them eighty years previously, commencing north of Lake Ontario and extending to the Twightwees and Quadoge, about eight hundred miles by four hundred in extent. In 1726 this was confirmed by a second deed, which included their country in New York.

But, nevertheless, it was under French protection and authority, and not by any permission or favor of the Five Nations, as they and the English were persistent in assuming, that the Wyandots, Miamis, Shawanees of the Wabash, and the Ottawas first entered and occupied the territory which now composes Ohio. These tribes were then under French allegiance, though some, the Miamis especially, were held by a very uncertain tenure.

CHAPTER IV.

THE BRITISH CONQUEST.

THE defeat of Governor Dongan's project for extending British dominion and commerce into the country bordering on the upper lakes, forced the English to look for some other avenue to the profitable trade so much coveted, and from which the French were so determined to shut them out. Unless it were by the canoe fleets in 1686 and 1687, which probably went up the usual Iroquois route by the south shore of Lake Erie, no Englishman had yet set foot in Ohio.

The first white population, and the first European rule in Ohio, must have been French. Who the inhabitants were, when they came, or where they lived, it would be difficult to discover. Cadillac's fort and settlement at Detroit had superseded Mackinac politically, and was now the central point of authority for Ohio and the route from Canada to Louisiana. Most of the Hurons and many Miamis and Ottawas were gathered near Detroit, in separate villages, on both sides of the river. Next west was the fort of the Miamis, established by La Salle at the St. Joseph's. An important post was soon formed at the head of the Maumee, the confluence of the St. Mary's

and another river St. Joseph's, (now Fort Wayne.) Between this post and Little River, one of the heads of the Wabash, was the great portage (eight miles) of the canoe traffic between the East and the West.

This line of communication had become so well established, that in 1718 Governor Spotswood, in a despatch to the Board of Trade, could state the itinerary or distances between Montreal and the Mississippi by this route of the Mic and the Occabacke, as he styled the Maumee and Wabash. All along this line the French immigrants colonized in their peculiar fashion. First to come, generally, were those nondescripts, the *coureurs des bois* (bush-rangers or moonshiners), who have left a scanty and unflattering record.¹ They were a mixture of the smuggler and trader; deemed outlaws because they would not purchase licenses under the rigid monopoly in the fur trade as farmed out in Canada. In this way thousands of Frenchmen disappeared who had been sent over to the colony at much expense; the king and his ministers constantly complaining of the loss of their subjects. Far out in the forests of the West, safe from the king's reach, they were living with the savages, marrying and hunting, fiddling, drinking and smoking, in entire independence. Of such were many of the earliest settlers of Ohio.

¹ The reader will find a fuller account of this class in *Indiana* (American Commonwealths), chap. 3.

But this loose population was soon driven onward by regular traders and officials, and it drifted off to the Wabash, the Kaskaskias, and the Mississippi, where its survivors appear in Judge Hall's "Tales of the Border ;" finally they vanish in the prairies and the mountains of the far West, figuring as voyageurs, guides, and mountain-men in all the expeditions, from that of Lewis and Clarke down to those related by Irving.

Their successors, in turn, also passed away. There were posts of the French traders at Cuyahoga, Sandusky, Maumee, indeed in every part of northern and western Ohio where Indians were most congregated. But there was no French settlement of which any trace remains. There was no history, hardly a "relation" of them, so that only the name survives. The traditions preserved in the "Firelands Pioneer," by Root, Lane, and Schuyler, are the most interesting.

The struggle against the English was in vain. Poor and feeble as the colonies planted by Englishmen had been at first, they began now to increase in size and to bristle with enterprise. The cheap prices at which the English control of the ocean enabled the English colonists to offer their goods, and their reckless traffic in rum, proved irresistible to the Indians of the West. But the direction from which they emerged and broke through the French lines was wholly unexpected.

Daniel Coxe's "Carolana," and the "Spotswood Letters" of still earlier date, show that the pro-

prietors and the traders of the southern colonies, particularly of Carolina, were much ahead of their northern brethren in traversing the Alleghanies. They must have been trading with the Indians down the Tennessee and Cumberland rivers at the time when La Salle was descending the Mississippi. Oldmixon, the earliest historian of the colonies, was indignant that, when the English thus had that river and its tributaries so near at their back, the French should presume to claim more power or right than they to its navigation, "whenever they shall have the same desire to it as the French have." According to Coxe, the Tennessee was the way of the traders and adventurers of the Carolinas down to the Ohio and Mississippi. D'Iberville sounded the alarm in an elaborate report to the minister of the marine and colonies (Pontchartrain) in January, 1701; pointing out the fact that these people were arming the Chicasaws and other tribes in a manner indicating that in thirty or forty years, unless the French king established a stronger power there, the English would be the masters of the whole country between their colonies and the Mississippi, "one of the most beautiful countries in the World." In July he urged that a grant of two leagues by six be conceded to Juchereau at the mouth of the Wabash, in order that he might establish his trading post and tannery there, and prevent the English from meeting the *coureurs des bois* at that point.

The warning was prophetic, but too late. In January, 1703, he reported to the minister that the English of Carolina and Maryland had an establishment at that place. He made a suggestion, which would surely have been a singular one if La Salle had in fact been on the Ohio, that "it was a favorable time for exploring that river." It was discovered also, at this time, that some of the Miamis at the St. Joseph's had been visiting Albany, and were disposed to remove farther from the French by going down to the Wabash. Vincennes was sent there in 1704 to restrain them, but did not succeed. Disturbances arose between the Miamis and Ottawas, which Cadillac inflamed by his gross mismanagement, and brought to a climax by attacking the Miamis at St. Joseph's with a strong force, and destroying their fort. From this time the French lost their control of the Miamis, and by means of this disaffection a large delegation of the tribe were induced by Montour and the Iroquois to meet the British governor, Lord Cornbury, at Albany, and to pledge their people to trade there. The governor reported his success to the Board of Trade as gained chiefly by Montour's address. This was a Canadian half-breed who had deserted from the French, and was shortly afterward killed for his treachery by order of Joncaire, the most active of the French partisan leaders. His wife and sons figured largely in subsequent history.

In 1719 Vaudreuil, the French governor, dis-

closed the fact, in a despatch to the minister, that the English had succeeded in drawing the Miamis away from St. Joseph's. He reported that Vincennes, whom he had sent again to regain control over them, had died at their village on the Wabash, and that they now refused to return. In October, 1725, he reported that the English of Carolina had progressed so far up the country that they had stores and houses on Little River (near the portage), and were trading there with the Miamis and other tribes of the upper country. Beauharnois, his successor, however, as he reported in October, 1731, had arranged with the Shawanees lower down on the Wabash, if the English sent horses there loaded with goods, to kill the horses and carry off the goods. "If these Indians," he said, "keep their word, it is to be supposed that the English will think no more of forming establishments in those parts." Supposing these to have been Carolinians, it is not surprising that nothing more is heard of them in those parts. It is to be observed, however, that the Carolina traders did not use horses, and the surmise at once suggests itself, whether the strangers on horseback thus announced were not other intruders crossing Ohio from the east. It is necessary, therefore, to cast our eyes in that direction.

The crowding together of villages of the various tribes in the vicinity of Detroit had not had the happy result which the French expected. The dissensions among them, followed in many

cases by murders, were so ill-controlled by the governors as to cause not only the Miamis, but a large body of the Hurons or Wyandots, to withdraw. The latter are supposed to have attacked and robbed a French settlement at Sandusky in 1744, taking their position on the Sandusky bay and river, and thus becoming more accessible to the English. Most strenuous efforts were made by the French governors and their commandants to bring the recusants back to their posts, but the overpowering advantages of the English trade had undermined all French authority; so that after the Treaty of Utrecht (1713), which granted free trade and put an end to the monopoly in Canada, the French control of the fur trade was virtually destroyed. It was, in fact, the beginning of a foregone conclusion. The fatal spot in the French colonial system appeared in the simple statement, in Vaudreuil's report in 1716, that "there are in Canada at present only 4,484 persons between 14 and 60 years of age capable of bearing arms, while in the English colonies, contiguous to Canada, there are sixty thousand." The long, gallant struggle of a few devoted men like Frontenac and Talon, La Salle, Tonti, and the Le Moyne, hampered by the selfish king, penurious in all but his vices, and by the grinding monopolists, could not make head against the free energy of the English. One cannot repress a feeling of sympathy for the brave spirits who devoted their lives to a falling cause, and yet were made to feel in every hardship the tyrant's rod.

In the disordered state of Indian affairs which prevailed in this quarter, it is difficult to fix any details with accuracy. Only general results are to be recognized. New paths were to be made between the East and West. An Indian movement of another sort began, of far more importance, inasmuch as it introduced the English for the first time apparently upon the soil of Ohio. This was the exodus of the Shawanees and Delaware Indians from eastern Pennsylvania. It began early in the eighteenth century, drawing with it the Moravian Missions, and followed, or rather attended by the inseparable parasites of the Indians, the traders; a species of the white race of whom nothing good has ever been said, though some do not deserve the stigma which has blackened the name. The history of this movement has been handed down in a little volume entitled "*An Enquiry into the Causes of the Alienation of the Delaware and Shawanees Indians,*" published in 1741, by Charles Thomson, afterwards secretary of Congress. Without going into the details of this bitter story, it is enough to say that by fraud, forgery, and most cruel violence, the Delawares were persecuted out of their beautiful country on the upper waters of the Delaware River, and took refuge with their friends, the Shawanees, on the Susquehanna. These formed a part of the Shawanees nation, who had been driven out of Florida in the previous century, and had migrated to the north in

two bodies; this one passing along the eastern slope of the Alleghany Mountains into Pennsylvania, the other going to the Cumberland River, and thence passing over to the Wabash, where La Salle had met them. A considerable portion of the Delawares had joined the Moravians and settled down to industrial pursuits in villages near Bethlehem, on the Lehigh. These, in their emigration, were accompanied by their devoted pastors.

The Delawares and Shawanees on the Susquehanna were much oppressed by the Six Nations (the Tuscaroras having been added about 1713), and gradually took up their pilgrimage to the west. They were the first people at the north to scale the Alleghany Mountains. Halting first on the upper waters of the Alleghany River (then known as the Ohio), they soon attracted the eye of Joncaire, the sleepless emissary of the French governor. With the arms and succor which he furnished them, they waged a bloody war of revenge upon the back settlements of Pennsylvania, Maryland, and Virginia for many years.

But being still too near the Senecas, they descended the Alleghany River to the Ohio and there separated; the Shawanees going on to rejoin their kindred at the Scioto, whilst the Delawares, in their more cosmopolitan way, distributed themselves among the Mingoes, Wyandots, and Shawanees, wherever they could find a welcome.

The date of these movements, with which the first progress of the English of the north toward Ohio took place, would be of interest, but necessarily is uncertain. Beauharnois and Aigremont, in their despatches as to the Oswego controversy in 1728, referred to measures taken by Vaudreuil in 1724 to bring the Pennsylvania Shawanees nearer to the French, and reported that they already had a village on the Ohio (Alleghany). Their deputies were at Montreal in 1728. In the spring of 1732 Joncaire informed Beauharnois that they had gone further down and established villages on the east side, below the Attigue (French Creek), and that negotiations had taken place between them and the Hurons, Miamis and Ouiatanons for admitting them west of the Ohio. The Hurons had objected, but the Ouiatanons (who were Miamis and better known as Weas), now the nearest neighbors of the Shawanees, had expressed the joy they felt, and in that way matters had been harmoniously settled. "They appear to be resolved," he added, "not to suffer the English to come that way to trade." But he was deceived.

That it was about this period that the Delawares and Shawanees opened the way whereby the traders of the middle colonies, particularly Pennsylvania, first gained access to the country northwest of the Ohio, was authoritatively confirmed in the Congress of the Colonies at Albany in 1754. The Six Nations complained that

aggressions had been made upon them by the governors of Pennsylvania and Virginia, who had made new paths, they said, through their country (western Pennsylvania), and were building houses without their consent. To counteract the charge, Conrad Wieser, the official interpreter of Pennsylvania and a high authority among the Six Nations, having been adopted by the Mohawks in his youth, was brought forward and replied: "The road to Ohio is no new road; it is an old and frequented road. The Shawanees and the Delawares removed thither above thirty years ago from Pennsylvania, ever since which time the road has been traveled by our traders at their invitation, and always with safety until within these few years."

The time can only be approximated, but as to the main facts there can be no doubt. The swarm of traders, with their long trains of pack-horses and attendants, kept pace with the slow and desultory movements of the Indians. This constituted the primary stratum of Anglo-Saxon life in Ohio; "civilization" is a term which hardly belongs with this mongrel horde. A circumstance mentioned in Christian Frederick Post's journal will explain the large infusion of Irish in this emigration. "The Indian traders used to buy the transported Irish and other convicts," he states, "as servants to be employed in carrying up the goods among the Indians. Many of these ran away from their masters and joined the In-

dians." Some of them, it may be added, became traders. Sir William Johnson, the king's superintendent of Indian affairs in the north and west, and George Croghan, his chief deputy at the west, also were Irishmen. The latter began his career as a trader about the year 1745 at the Huron River, in Ohio.

Putting together the two events, Beauharnois' despatch in 1731 concerning the English with horses who were then appearing on the Wabash, and Joncaire's report in 1732 as to the joy with which the Miamis had received the Shawanees from the east, it may reasonably be collected that the English traders, following in the wake of the Indians, had as early as the year 1730 made their way across the middle or southern part of Ohio under favor of the Miamis ; and furthermore that the Miamis had at this time extended themselves further away from the French to the position on the Big Miami River, where they were found by De Celoron in the year 1749, and by Gist in 1750. Necessarily, before this event, the solitudes had been broken, and the valleys of the Muskingum, Hockhocking, Scioto and the two Miamis, as well as the Cuyahoga, Huron, and Sandusky, had become the hunting grounds of the new nations from the west which from the beginning of the century had been gathering in. That all this had occurred by any authority or permission of the Five Nations would be hard to show.

The contest now began between the French

and English for the control of the trade, and it may be said of the country, on the Ohio River. The Pennsylvania trader and the blacksmith, a great desideratum among the Indians, soon became prominent at all the Indian towns. Their free trade in arms, ammunition, rum and British goods, on French territory, not only made them an object of alarm as trespassers and smugglers, but, what was infinitely worse, their traffic, at less than half the tariff of prices which the French had fixed upon the Indians, made their competition fatal to French commerce and French authority. The French commandants resorted to every art and even threats to hold the Indians to their regulations. But the contraband commerce was pushed by emissaries (Iroquois, Mohegans, and whites), for the purpose of sowing jealousy between the Ohio tribes and the French governors. There is little doubt that the English colonial governors were granting licenses to their traders to encourage them in pushing their traffic. A distressing indication of this will be found in the piteous appeals which the Indian chiefs, in their visits and councils with the governors, constantly addressed to them to stop the traffic in ardent spirits, by which the traders were robbing and ruining their people. Hardly one of the provincial governors had the courage or humanity to heed them.

In this contention Croghan, the Montours, and McKee became the leading agents of the English.

On the French side the two Joncaires, father and son, were ubiquitous. Without entering into minute occurrences, a few only of the events which led to the French and Indian war can be referred to; the first serious outbreak being a conspiracy of the Hurons under Nicolas at Sandusky in 1747, as usually represented, but really part of a far more extensive and dangerous scheme than that. There is every indication that a league including seventeen tribes for the overthrow of French authority at the west, and of which Demoiselle, chief of the Twightwees (Miamis), was the head, had been nearly formed. His town and fort was on the river La Roche (Big Miami) at or near the present city of Piqua. The plot was prematurely sprung by Nicolas, one of the chief agents in it. He was the head of the refractory band of Hurons who in 1744 had withdrawn from Detroit and established themselves at Sandusky Bay, or perhaps up the river. Here he was found by a party of Pennsylvania traders early in 1747, and at their instance, as the French authorities were informed, robbed and murdered five French traders, who, on their way from White River to Detroit, had passed through the town with their train.

Hostilities at once followed. The Miamis captured the French fort at the head of the Maumee. Many of the French traders in Ohio, taken unawares, were pillaged and murdered. But the outbreak was quickly reduced by a stronger hand

than the ordinary governors or commandants. By accident, the Marquis de la Galissonière, a soldier and a statesman also, of eminent ability and energy, was at this time the acting governor at Quebec. Jonquiere, the regularly appointed governor, had been captured by the English on his voyage out, and Galissonière appointed *ad interim*. He arrived at Quebec in September, 1747, and had a short but eventful administration. With his quick perception he grasped the whole field of trouble, and though the season was too late for immediate action, his measures were such that strong reinforcements and supplies were sent early in 1748 to Detroit and Mackinac, with instructions to Longueil, the commandant at Detroit, of such rigorous severity that Nicolas and his band were compelled to betake themselves to the far West, and Demoiselle came with much show of grief to Detroit. With this, however, Galissonière was not satisfied.

De Celoron, a veteran major in the French service, who had conducted the reinforcements to Longueil, was ordered by Galissonière, on his return to Montreal, to fit out an expedition of French and Indians, and early in the next year to cross Lake Erie to the upper Ohio and proclaim the sovereignty of France. His orders were, after expelling the English traders and reducing the Indians to subordination, to visit Demoiselle at his fort on the river Roche and compel him to go back to the St. Joseph's.

Galissonière's purpose, distinctly, was to force an issue with the English provincial governors; for as yet there was no hostility between the two governments, and the outbreak was merely local. He regarded the country on the Ohio as belonging by right and exclusively to France, and held that it was endangered by the temporizing conduct of his predecessors. He penetrated the insidious designs of the English in the turbulence, revolts, and murders into which the tribes lately so closely allied with the French had been drawn; and it was his intention to have followed up De Celoron's demonstration by establishing forts to command the Ohio River. He was recalled to France on what were considered weightier affairs.

These measures of Galissonière were really the inception of Ohio history, and the State may be proud of the auspices under which she first emerged from obscurity. De Celoron's expedition, of about two hundred and fifty French and Indians, left Montreal June 15, 1749. Lifting his bateaux out of Lake Erie into Lake Chautauqua, and forcing them through its outlet into the *belle riviere* (Alleghany), he buried in the opposite or south bank a lead plate inscribed with the proclamation of Louis XV. as king, and reasserting his dominion and possession of the Ohio, and of all rivers and countries connected with it. Similar plates were buried on the south side of the Ohio, near Wheeling, at the mouth of the Kanawha, and also at the mouth of the Muskin-

gum and Big Miami rivers. France, it is to be observed, distinctly proclaimed her dominion over Western Virginia in this expedition.

On the 6th of August, at Chiningue (Logstown), De Celoron captured a party of English traders, with a train of fifty horses and one hundred and fifty packages of furs, bound for Philadelphia. They pleaded their licenses from the governor of Pennsylvania, and were discharged, but were warned that they and their fellow-traders were to expect no more leniency. De Celoron also dispatched formal notices by them to the governor of Pennsylvania to the same effect, and passed on to the river Roche (Big Miami), which he entered with his bateaux August 30th. The navigation at that season must have been most difficult, but he arrived at Demoiselle's village (no fort is mentioned) September 13th. The chief he treated with much consideration and gave him handsome gifts, but reproached him for his ingratitude, and very peremptorily told him that he had come to take him by the hand, and lead him back to the graves of his fathers at Kiskakon, there to relight the old fires. Demoiselle and Baril, a chief on the Little Miami, accepted the gifts, but pleaded the lateness of the season, and so prevailed on De Celoron to allow them to postpone their removal until early in the following spring. The expedition then went on by land to the French fort, which had been re-established at the head of the Maumee.

The fact that De Celoron's report was the first authentic relation yet known of Ohio, excites a lively interest in it until it is read ; but is so dry, and restricted to the details of an official report, that, except as to topography, it is of little merit. The old soldier would not deign to notice a single scene in all the landscape through which he passed. To Father Bonnecamps, the chaplain and mathematician of this expedition, Ohio owes the first map of her boundaries or outlines yet discovered.

Hamilton, the governor of Pennsylvania, in a letter to Governor Clinton of New York, dated October 2d, admitted the reception of De Celoron's protest, and in no wise denied granting the licenses to the traders which De Celoron charged upon him. His only apprehension seemed to be lest the traders might now be molested. He found that they were so satisfied of the friendship of the Indians, however, that they were determined, he said, to prosecute the trade "which has of late been a very valuable one."

Another provocation of the French now arose out of the formation of the Ohio Company, an association of leading Virginians and some London merchants engaged in the Virginia trade. Two of General Washington's brothers were members. Thomas Lee, president of the Virginia Council, is usually accounted as the originator of the plan, which was to make settlements on the fertile lands of the Ohio valley, marvelous accounts

of which were being brought in by the traders. But Smollett's History attributes the plan to Governor Spotswood, and states that he proposed it to the English ministry in 1716. This was the year of his celebrated "Tramontane expedition" to the Blue Ridge, escorted by the Knights of the Golden Horseshoe. Spotswood's proposition was laid aside, Smollett intimates, partly from fear of the French, but more perhaps because of the dispute just then arising between Virginia and Pennsylvania concerning their boundaries on the Ohio.

Besides colonizing, the object of the Ohio Company was to enter into competition with the Pennsylvanians in the lucrative business of smuggling among the Indians, a business which the Pennsylvanians hitherto had enjoyed almost exclusively. The petition which they addressed, not to the governor of Virginia but to the king, was the beginning of operations in Western lands: it asked a grant of lands northwest of the Ohio, if deemed expedient, but mainly between the Monongahela and Kanawha rivers, so that the water communications between the heads of the Potomac and Ohio might be available for transportation. The king approved it, and authorized a grant of 500,000 acres to be made. But the grant was never issued.

Without waiting for it, the company erected stores at Wills Creek (Cumberland), opened a road or path across the mountains to the Monon-

gahela, and prepared to erect a fort at the confluence of this and the Alleghany River, then known as the "Forks." Goods were imported from England and sent forward. The company also sent out Christopher Gist, an experienced woodsman and surveyor, well known among the Indians, with instructions to "cross the mountains and search out the lands upon the Ohio and other adjoining branches of the Mississippi, as low down as the great falls thereof." He had instructions from Governor Dinwiddie, also, to invite a meeting of the Indian tribes at Logstown, a village of the Senecas on the Ohio, sixteen miles below the Forks, to receive gifts which their father, the king of England, had sent over as a token of amity.

The English traders and emissaries on the Ohio became more busy and defiant than ever. De Celoron had no sooner turned his back than the traffic and intriguing with the Indians was recommenced, new forces from Virginia and Maryland entering into the competition. But Jonquière, who in May, 1749, succeeded Galissonière as governor, disapproved of the leniency which De Celoron had shown to Demoiselle and the traders. De Celoron, being now commandant at Detroit, received orders which soon convinced the English that his warnings were no idle form. All traders who were found by the French in Ohio were arrested by his troops and auxiliaries, the Ottawas. He also established a fort at the upper end of Sandusky Bay.

Captain Gist set forth on his exploration of Ohio about November 1, 1750. Descending the Alleghany and Ohio rivers to the Big Beaver and thence crossing the country, he came on the 5th of December to the Tuscarawas (then called the Mooskingum, or Elk's Eye Creek) at a point near the line between the counties of Stark and Tuscarawas. Going down that stream, through beautiful meadows and open timber, though in some places there was none, he arrived on the 14th at Muskingum, a large town of the Wyandots, and the residence of their king, situated some fifteen miles above the confluence of the Elk's Eye and Whitewoman's Creek (Wahlhonding). Here he met George Croghan and Andrew Montour on an official expedition, and found the British colors hoisted over the king's house. This was in consequence of an alarm excited by the arrival of fleeing traders, who were coming in every day, stripped of their property by strong parties of French and Indians traversing the country, and glad to escape with their lives. A council of the Wyandots was held, at which Croghan and Montour announced the arrival of the king's great present in Virginia, and formally invited them to go and meet the governor, to partake of "Rogoney's favor." The King and Council thanked them, but "would wait for a general council of the Indians next Spring."

In company with Croghan and Montour and their escort, Gist rode over to the Scioto and

down its east bank to the lower Shawanees town, situated, as he states, on both sides of the Ohio, a little below the Scioto. Here Croghan and Montour made another most elaborate effort to win over the Indians, but with no better result than with the Wyandots.

They then went across the country to the Picqualinees, Piankeshaws, or Picktown (a tribe of the Tawightis, or Tawixtis, as the Miamis at that time were called by the English), on the west bank of the "Big Mineami." Gist states that it contained four hundred families, and was one of the strongest Indian towns in that part of the continent. Numbers of traders had taken refuge there. Some had their own houses. The fort wanted repairs, and the traders were helping to line the inside with logs. The success of the English emissaries here was complete. A delegation of four Ottawas appeared at the council with speeches and gifts from the French. The scene which followed, as described by Gist, was a dramatic one. The Ottawas were too haughty, and made themselves offensive by allusions to the recent backsliding of their brothers, the Miamis. The Piankeshaw king arose and withdrew in a passion whilst the Ottawa speaker was still haranguing. The council, with more dignity, heard him through, and reserved their decision until the next morning. It then came from the Tawighti war chief, who gave the voice of the Miamis against the French, and in terms so emphatic that

the Ottawas lost no time in getting out of the town.

From this point Gist turned south, and went back through Kentucky to Virginia. His descriptions are far more interesting and show keener observation than those in De Celoron's Journal, though limited much in the same manner to the object of his special mission. A single extract respecting the country through which he passed, between Portsmouth and Piqua, will give a glimpse of primitive Ohio:—

“All the land from the Shawanese town to this place (the Tawighti town) except the first twenty miles, which is broken, is fine, rich, level land, well timbered with large walnut, ash, sugar trees, cherry, etc., well watered with a great number of little streams, and abounds with turkeys, deer, elks, and most sorts of game, particularly buffaloes, thirty or forty of which are frequently seen feeding in one meadow; in short, it wants nothing but cultivation to make it a most delightful country. The land upon the Great Mineami River is very rich, level, and well timbered, some of the finest meadows that can be. The grass here grows to a great height in the clear fields, of which there are a great number, and the bottoms are full of white clover, wild rye, and blue grass.

“Returning,” he says, as far as Mad Creek with his former company, “we there parted, they for Hockhocking and I for the Shawanese town; and as I was alone, and knew that the French Indians had threatened us and would probably pursue or lie in wait for us, I left the path and went southwestward down the Little

Mineami river or creek, where I had fine traveling through rich land and beautiful meadows, in which I could sometimes see forty or fifty buffaloes feeding at once. The Little Mineami continued to run through the middle of a fine meadow, about a mile wide, very clear, like an old field, and not a bush in it. I could see the buffaloes in it about two miles off."

The triumph of the English was short, and the Piankeshaw king was made to rue it. Captures and murders now multiplied on both sides. By order of De Celoron, three Pennsylvanians who ventured to Sandusky, and another who was so bold as to go to the French fort at the head of the Maumee, about the close of the year (1751), were arrested as spies and sent to Montreal. After an examination by Jonquiere, they were sent to France for trial. Lord Albemarle, the British minister at Paris, formally demanded their release, on the plea that they had been captured illegally. The right of sovereignty over the territory of Ohio thus became a question of state. The French minister released the prisoners, but the settlement of the main question was left to the entanglements of diplomacy.

Under the skillful handling of Croghan and his auxiliaries, the Indians were worked up to such a pitch of exasperation that fifty or sixty Frenchmen were computed to have been slain in the forests of Ohio and on the Wabash in the fall and winter of 1751-52. The Miamis openly "offered the hatchet" to the English governors. To add

to the complication, Governor Dinwiddie, professing to serve the king, now came into the field, equally jealous of the French and of the Pennsylvanians. He denied that Penn had any title on the Ohio River, and persevered in his purpose of holding his meeting with the Indians at Logstown by sending three commissioners there in May, 1752, assisted by Wieser and Gist, to treat with the Senecas, Shawanees, and Delawares. A generous distribution of gifts in the king's name was made, and a share reserved for the Miamis, who did not come as expected. Dinwiddie's purpose was to obtain a ratification by the western Indians of a cession which, it was alleged, had been made by the Six Nations to the king in 1744, at the treaty of Lancaster, of all their lands within the bounds of Virginia. This treaty had been a scene of drunkenness, debauchery, and fraud, disgraceful to the commissioners and to all who were concerned in it. The sham, however, could not be palmed off upon the savages at Logstown. They complained there was "too much pen-and-ink work" about this matter, and, as they understood it, the cession made at Lancaster did not extend west of the Alleghany hills. But they agreed not to molest the settlements southeast of the Ohio River, and consented, as Dinwiddie understood it, that he should build a fort at the forks of the Ohio.

But while this "pen-and-ink business" was going on at Logstown, De Celoron, by a sharp

and decisive blow, put an end for a time to British schemes on the Ohio. He dispatched from Detroit two hundred and forty Frenchmen and Ottawas, who suddenly fell upon the Tawightis, June 21, 1752. The Picqualinny town and fort were captured, many of the Indians and traders slain, and others carried off as prisoners. Their goods were confiscated, and the Piankeshaw king was killed and devoured by the Ottawas, in revenge for his insult and murders. This chief was called "Old Britain" by the English. Whether or not it was Demoiselle does not appear. The French officers in this expedition are not ordinarily named, though Belletre and Longueil had been reported to Sir William Johnson, in the summer of 1751, as having gone up Lake Ontario to "attack the Twigtee village where the English are building a stone house for trading;" or, as expressed by him to Governor Clinton, "to stop the Philadelphians building at or near the Ohio."

This reduced the Ohio tribes to abject submission. They sent most imploring messages to the English governors for aid, but received nothing in return but assurances of sympathy. The angry Miamis turned back again to their French allegiance, and sent deputies to Detroit and Montreal to sue for mercy. "Thus," in Mr. Bancroft's phrase, "on the alluvial lands of western Ohio began the contest that was to scatter death broadcast through the world."

Without detailing the events of the seven

years' war, by which the country northwest of the Ohio was converted into a province of the British dominions, we may at least bestow a glance at that part which was fought so closely upon its border as to be essentially a part of the history of Ohio.

The Marquis Du Quesne was sent to succeed Jonquiere as governor in May, 1752, with instructions to drive the English and their traders away from the Ohio. For that purpose he sent a strong force early in the next year, under the *Sieur Marin* (*Morang* the English had it), a fierce old veteran of the most determined character. To reach the head of the Ohio he landed at *Presq-isle* (*Erie*), and built a fort on the peninsula. A wagon road was cut through to the west branch of French Creek (*Le Bœuf*), eighteen miles distant, and another fort constructed there, with a depot for stores midway between the two. At this the English on the Alleghany fled. *Tanacharisson*, the half-king of the *Senecas*, came to *Marin* and protested indignantly, "This land is ours and not yours."

Marin, throwing aside all ceremony, denounced him as foolish. "You say this land belongs to you; but not so much of it as the black of my nails is yours. It is my land; and I will have it, let who will stand up for it."

Marin had pledged *Du Quesne* that he would be upon the Ohio before winter. But want of supplies for his fifteen hundred men, the low

water in French Creek, the heat and malarial fevers, proved an insuperable combination. His guns and heavy stores could not be moved down to the Alleghany. The unhappy general closed the year by sending back twelve hundred of his men, reserving a garrison of three hundred at Le Bœuf, where he remained and where he soon died. It was here that Major George Washington, in December, presented to St. Pierre, Marin's second in command, Governor Dinwiddie's letter, addressed to the commander of the French forces, demanding that he "retire from his Britannic Majesty's dominions."

Through the terrible inclemencies of that winter, with Captain Gist as a guide, Washington had come to Tanacharisson, at his town on the Ohio, for an escort. Tanacharisson told him of Marin's speech, and seemed in no wise inclined to meet the Frenchman again. Washington would accept no excuse, and with Gist and Tanacharisson made his way to Le Bœuf. The delays and plots which the cunning Joncaire and the French invented to cut him off need not be related. Taking St. Pierre's reply, and a head full of observations he had been making on the French, the young envoy returned, through great perils, to Williamsburgh, and made his report to the governor.

St. Pierre's reply led Dinwiddie to take immediate measures to prevent the descent which the French, as Washington had discovered, were

intending upon Logstown. Captain William Trent had already been commissioned to raise a company of one hundred men, and sent to Redstone. He was now ordered to build a fort at the junction of the Monongahela and Alleghany rivers, and in February began it. But on the 16th of April, a French force of one thousand men with artillery, under command of Contre-cœur, descended upon his little party in his absence, captured their work, and proceeded to erect in place of it the strong work, armed with cannon, known as Fort Du Quesne. France now held the Ohio and the lakes.

Galissonière's policy had triumphed, and for the present the question was settled. The English were completely driven out. France by this measure became possessed of all the country west of the Alleghany Mountains. Ohio and the Northwest relapsed wholly into her control. How completely the Miamis and their confederacy were humbled appears from a letter of Washington to the governor of Pennsylvania, announcing the capture of the Virginians on the Ohio, and that six hundred Ottawas and Chippewas were coming by way of the Scioto to aid the French.

The supine indifference of the English colonies in this state of affairs on the Ohio seems at the present day incredible. All the horrors of an Indian invasion were threatened. Governor Dinwiddie addressed the most urgent appeals to the provincial governors, as well as to the British

government, to aid in defending the frontier. The provincial assemblies with one accord excused themselves. Pennsylvania would do nothing unless Virginia would relinquish her claim to the territory now invaded. We get some insight of the wrangle which subsequently distracted the States during the war for independence.

The British government manifested more concern than the colonies. Years had been wasted in a tedious, inconsequential exchange of memorials and conventions between commissioners of the two nations at Paris, in which each had been seeking to amuse the other with a seeming desire to preserve peace, while secretly laboring to prepare for war, in America. But the British cabinet was alarmed at the advantage now gained by France, and fitted out an expedition in February, 1755, under General Braddock as commander-in-chief of forces in America ; the first which Great Britain sent to this country. He was secretly instructed that, with the regiments which he brought over and two provincial regiments to be raised by Shirley and Pepperel as colonels, and companies of riflemen and rangers levied elsewhere, he should direct three expeditions against Fort Du Quesne, Niagara, and Crown Point.

All this was divulged in July by the capture of Braddock's baggage and papers at the defeat and destruction of his forces on the Monongahela. All his instructions, plans, and correspondence with his government and with the provincial au-

thorities were exposed in a "Memorial" which the French government issued to the courts of Europe to show the perfidy of the English. Nothing could better evince what 'mere' sport American affairs at this time were with the European statesmen and diplomatists than the position taken by the French minister on receiving intelligence of Du Quesne's advance, and possession of the Ohio: he made a formal proposal to England that both nations should retire from the Ohio and the territory west of the mountains, so that "the respective pretensions" might be "amicably submitted to the commission appointed at Paris, to the end that the differences between the two courts may be terminated by a speedy reconciliation," suggesting, at the same time, that it "would relieve his Christian Majesty of an uneasy impression if his Britannic Majesty would be open and explicit as to the destination of the armament (Braddock's) last raised in England." But the British court was sore, and after temporizing sufficiently for Braddock's expeditions to march, declared war in May. France also declared war in June.

Braddock's disastrous fate, followed by years of ravage and desolation of western Pennsylvania and Virginia by the French Indians; the loss of Minorca, where Galissonière, by his superior manœuvring of the French fleet, drove off Admiral Byng; the mismanagement of Braddock's successor, Lord Loudoun, by which every meas-

ure for the next two or three campaigns in America was somehow defeated or miscarried, — all seemed to point to the overthrow of the English, and to the permanent establishment of French dominion over the lakes and the West.

Fortunately, as the people of Ohio will ever probably esteem it, the House of Commons and public opinion in England compelled the king at this crisis, against all his antipathies, to accept William Pitt, afterwards Earl of Chatham, for a brief term as the head of his government. In June, 1757, this great minister succeeded to the long, ignominious control of affairs by the Duke of Newcastle and his followers, and in his administration, short but momentous, breathed an ambition akin to his own into the generals and admirals of a new school to whom he committed the armies and fleets in America. The losses were soon repaired. Among the gains was Fort Du Quesne, which on November 9, 1758, on the approach of General Forbes and his powerful forces, in which were Colonels Washington and Bouquet, was evacuated and blown up by the French. By Wolfe's great and crowning victory on the heights of Quebec, September 13, 1759, the result was determined. The contest in Upper Canada continued until the total surrender to Sir Jeffry Amherst, September 8, 1760, by the capitulation of Vaudreuil, the governor. This ended the war in America. War on the ocean and in the West Indies continued until late in 1762,

when preliminaries for peace were signed, and on the 10th of February, 1763, the Treaty of Paris was closed, and "the confines between the dominions of Great Britain and France in America fixed irrevocably by a line drawn along the middle of the river Mississippi from its source to the river Iberville, and by a line through this river and lakes Maurepas and Pontchartrain to the sea."

Men may question if the victorious cause was the just one, but accepting the accomplished fact, immortal gratitude attaches to Mr. Pitt from every dweller by the lakes and rivers of the West. It is his glory that he struck this imperial blow just in time to save the undivided continent to the Anglo-Norman race and institutions. The interest and importance which he attached to the possession of the Ohio will be seen in an extract from a letter written by him on receiving the news of the capture of Fort Du Quesne :—

" WHITEHALL, *January 23, 1759.*

"SIR: I am now to acquaint you that the King has been pleased, immediately on hearing the news of the success of his arms on the river Ohio, to direct the Commander in Chief of his Majesty's forces in North America, and General Forbes, to lose no time in concerting the properest and speediest means for completely restoring, if possible, the ruined Fort Du Quesne to a defensible and respectable state, or for erecting another in the room of it, of sufficient strength, and every way adequate to the great importance of maintaining his

Majesty's subjects in the undisputed possession of the Ohio ; of effectually cutting off all trade and communication this way between Canada and the Western and Southwestern Indians ; of protecting the British colonies from the incursions to which they have been exposed since the French built the above fort, and thereby made themselves masters of the navigation of the Ohio ; and of fixing again the several Indian nations in their alliance with and dependence upon his Majesty's government."

CHAPTER V.

ANNEXED TO QUEBEC.

THE Treaty of Paris may be said to have laid the corner-stone of American independence. It lifted the cloud of terror which had so long overhung the great wall of the Alleghanies. The colonists no longer felt that they needed England's protecting arm to secure them from the French. The frontiersmen had never doubted their ability to cope with the savage but for the aid and supplies which their enemies received from Canada and the western posts.

Stripped of all verbiage, the treaty declared that the king of France ceded and guaranteed to the king of England Canada and all his dependencies or rights east of the Mississippi River.

The king of Spain also was a party to the treaty, and ceded East and West Florida to England for the restoration of Havana, which had been captured in the war. The king of England, on his part, granted to the inhabitants of the ceded territories the liberty of the Catholic religion and worship, according to the rites of that church, as far as the laws of Great Britain admitted, and the right, if they chose, to sell their

estates and quit the country within eighteen months.¹

The treaty would have let loose the land speculators and the whole Pennsylvania and Virginia border upon the Indians. The king of England, therefore, by an order in council, October 7, 1763, known as the "King's Proclamation," proceeded to erect the three new provinces of Quebec and East and West Florida with certain boundaries, giving to the governors power to summon assemblies for legislation, establish courts, etc. The governors of these provinces were authorized to make grants of lands within their respective boundaries; especially for bounties, on a fixed scale, to all the officers and men of the land and naval forces who had served in the late war in America.

But in order that the Indians under the king's protection should not be molested or disturbed in the possession of parts of the late conquest reserved as their hunting-grounds, it was declared to be his will and pleasure that no governor in any of his colonies or plantations in America should presume, until his further pleasure, to make grants for "any lands beyond the heads or sources of any of the rivers which fall into the Atlantic from the west or northwest, or any lands whatever reserved to the Indians."

The proclamation also declared "all the lands and territories lying westward of the sources of the rivers which fall into the sea from the west

¹ See Appendix, No. I.

and northwest, as aforesaid, other than those set off to the three new provinces, to be reserved, under the king's sovereignty, protection, and dominion, for the use of the Indians; and all his subjects were strictly forbidden, under pain of his displeasure, from making any purchases or settlements whatever, or taking possession of any of the lands so reserved, without his special leave and license for that purpose first obtained. All persons who had either willfully or inadvertently settled upon any lands within the country reserved to the Indians, were required to remove themselves forthwith."

Private persons were forbidden to purchase lands of the Indians, and no cessions from them even to the king were to be taken unless in his name, and at public councils or assemblies of the Indians held by his governors for that purpose.¹

This exclusion of the colonies and plantations from the territory west of the mountains, and taking it under the king's exclusive domain, was not a sudden or arbitrary measure. Before the war the Albany congress (1754), in their "Representation" to the king, had recommended explicitly "that the bounds of those colonies which extend to the South Sea be contracted and limited by the Allegheny or Apalachian Mountains." But this was more effectively done by the French the same year. To enforce the pledge of religious liberty given to the Roman Catholics in the treaty,

¹ See Appendix, No. I.

General Gage issued a proclamation in December, 1764, reassuring the French in Illinois that they had the same rights and privileges in that respect as enjoyed in Canada ; and if, instead of retiring to New Orleans, they should take the oath of fidelity, they might rely upon enjoying the same security for their persons, property, and liberty of trade as old subjects. The French had been exceedingly restive, and it was suspected were still inciting the Indians against the English.

The king's proclamation shows that, in the construction put upon the treaty by the crown authorities, the ceded territory was a new acquisition by conquest. The proclamation was the formal appropriation of it as the king's domain, embracing all the country west of the heads or sources of the rivers falling into the Atlantic. This appropriation, by the settled principles of the king's prerogative under English law, vested the domain in him exclusively, so that it could inure to no subject without his further pleasure, as expressed in the proclamation. The royal prerogative admitted of no trusts, or participation in its fruits or flowers.

As the ceded territory embraced what is now the State of Ohio, this consequently passed to the crown, in the same full right and dominion as the king of France had held it at the beginning of the war. In this condition it remained until it should be established as a new province, or annexed to one of the pre-existing provinces ;

subject only to military commanders or Indian agents, acting under the immediate orders of the king in council, or of the Board of Trade, which at that period administered the king's domain in America. As a matter of fact, neither of the provincial governments, by which the thirteen colonies were then controlled, ever exercised or assumed any control of it. In respect to them it stood much in the same position as that now subsisting between the states and the territories.

From this it results that the present territory of Ohio, in common with all the reservation thus made by the crown to its own immediate dominion, has its proprietary and political basis exclusively in the Treaty of Paris and the king's proclamation of 1763. The primary title in the soil of Ohio comes through the treaty, which, in the cession to the king, excepted only such possessions as had been granted to the inhabitants under the French law. As no French grants had been made in Ohio, the soil passed to the king entire.

Under these conditions, another of which was the reservation that the king would dispose of this Indian territory according to his further will and pleasure, Ohio was now relegated, under its new sovereign, to the mercies of the Indians, the traders and the waifs and strays, who were quickly in motion for the border.

The first act of British authority was the dispatch of a company of regulars and two hundred

and fifty rangers, under Major Robert Rogers, to take possession of Detroit and its dependencies, in September, 1760, immediately after the surrender of Montreal and Canada. This was accomplished without any conflict; and Rogers, after stationing his regular troops at Detroit as a garrison, and sending small detachments to occupy the French forts Miami and Gatanois and their post at the mouth of the Scioto, returned by way of Fort Pitt. His journal of the expedition gives interesting descriptions of the lake shore, and his return from Detroit around the western shore of Lake Erie, and across the country to Pittsburgh. He was an illiterate man, and unprincipled in money matters, but a good ranger and observer. He is supposed to have met Pontiac at the Cuyahoga, on his route westward. The scene has been portrayed as highly dramatic. His own account of the occasion does not mention Pontiac. The meeting which he describes with the Indian delegates was at the Chogage River, thirty or thirty-two miles west of Presqu'isle, therefore not the Cuyahoga. His itinerary across Ohio points out many landmarks now easily recognized, and, like all the early descriptions, recounts marvels in regard to the profusion and variety of game.

In July, 1761, Sir William Johnson made a grand progress to Detroit as superintendent of Indian affairs, bearing gifts to the Ottawas and their confederate tribes. His journal of the voy-

age along the lake shore, in going and returning, adds further information as to the country, and is especially full as to the meetings with the savages at Detroit, where he vainly supposed that a firm and lasting peace was established. As serving to show the progress of the West, Sir William mentions a dinner party by the commandant at Detroit, and a ball at which he opened the dance with one of the French belles, keeping up the gayeties until five o'clock the next morning. He had no suspicion of the great revolt of Pontiac, so near at hand, but the disclosure he makes as to the weakness of the British posts is quite significant. He notes the force in the garrisons, as being 150 at Detroit, 30 at Mackinac, 20 at Fort Miami (Fort Wayne), 30 at St. Joseph, 30 at Ouiatanon, 12 at Sandusky, and 30 at Presqu'isle, Le Boeuf, and Venango each. Neither he nor Rogers make any mention of a fort at Sandusky, but Sir William refers to a "block house to be built about three leagues from the mouth of the lake."

All this while the French virtually had control of the Indians and their whole country on the Wabash and west of the lakes. As already seen, they had from the time of erecting Fort Du Quesne thoroughly reconverted them all, the Miamis included. The French traders also, from that time, had penetrated and monopolized the whole country east and west of Fort Pitt, and though somewhat worsted, after the capture of Fort Du Quesne in 1758, in competition with the

English on the Ohio, they still held their own everywhere west of it. The recoil of the border settlers, however, which commenced with that event, their eagerness for revenge, and their evident purpose to regain their former haunts, aroused the hostility of the Indians. The unhappy savages, now between the French and the English, began to realize the picture drawn by a French Indian : —

“Brothers,” he exclaimed, “are you ignorant of the difference between our Father and the English? Go see the forts our Father has erected and you will find that the land beneath his walls is still hunting ground, having fixed himself in those places we frequent only to supply our wants : whilst the English, on the contrary, no sooner get possession of a country than the game is forced to leave it ; the trees fall down before them ; the earth becomes bare ; and we find among them hardly wherewithal to shelter us when the night falls.”

Still better, however, as a stroke of Indian humor, was the hit from a Mohawk at one of their conferences with Sir William Johnson : —

“I must now say it is not with our consent that the French have committed any hostilities at the Ohio. We don't know what you Christians, English and French together, intend. We are so hemmed in by both that we have hardly a hunting place left. In a little while, if we find a bear in a tree, there will immediately appear an owner of the land to challenge the property and hinder us from killing it, which is our livelihood. We are so perplexed between both that we hardly know what to say or think.”

The result of the alarm and exasperation excited among the Indians of the Northwest by the intrigues and false reports of the French traders, working against the English with infinite tact, was the terrible outbreak in 1763, close upon the Treaty of Paris, known as Pontiac's War. The Ohio Indians were supposed by Sir William Johnson to be the chief authors of the mischief, and burst forth like hornets. As is now better understood, it was the genius and work of Pontiac, a chief of the Ottawas. This nation, it will be observed, had been constant to the French. Pontiac's capacity for war was great, and his hatred of the English intense. He sent to New Orleans for arms and munitions. His faculty for administration and scheming employed two secretaries, one to write his letters, another to read those which he received ; neither being permitted to know the transactions of the other. By this sudden gust every one of the British posts just mentioned, except Detroit and Fort Pitt, were swept away. Croghan, the deputy superintendent, computed that in four months two thousand men, women, and children on the borders of Pennsylvania, Maryland, and Virginia had been murdered, or taken across the Ohio in captivity. Detroit was saved by a forewarning which Gladwin, the commandant, caught from a friendly Indian. Fort Pitt was rescued only by a forced march of Colonel Bouquet, a Swiss officer of great merit commanding a battalion of the Royal Americans, sixtieth

British Infantry, and a masterly stratagem, by which, within an hour, he saved his own force and the beleaguered fortress from the exultant savages, and routed them, filling them with dismay at his skill in battle.

To penetrate Ohio and break up this unexpected opposition of British rule, two expeditions were sent there in 1764: one under Colonel Bradstreet, who passed up Lake Erie from Niagara in July; the other under Colonel Bouquet, which, from the difficulty met in transporting troops and supplies across the mountains, was delayed until October. Bouquet then marched directly across the country from Fort Pitt to the Muskingum with two battalions of the forty-second and sixtieth regiments, and about seven hundred provincial troops, pitching his camp, October 13th, on the bank of the Tuscarawas, near the point where Captain Gist had first approached it.

The two expeditions were to have acted in concert; and as Bradstreet's movement by water would advance more speedily, he was to have proceeded first to Detroit and Mackinac, and then to have fallen back to a position at Sandusky. This was to check any attempt of the Ottawas and Hurons to assist the Senecas (Mingoes), Shawanees, and Delawares against Colonel Bouquet, whose special mission was to punish these tribes.

A blunder of Bradstreet at the first step came near frustrating both expeditions, and but for

Bouquet's superior military judgment and sagacity would have defeated the campaign. While pushing his trains across the mountains in August he received a despatch from Bradstreet, dated the 14th, at Presqu'isle, informing him that he had there met the Delawares and Shawanees and made peace. The crafty warriors on the Scioto had discovered the English plan, and sent ten of their chiefs to intercept him, under a pretense of suing for peace. Bradstreet fell into the snare and concluded an armistice, the deputies feigning that their warriors were recalled, when in fact they were murdering the whites all along the frontier below, and trusting that the distance would hide their falsehood.

Colonel Bouquet was not so easily deceived, and prosecuted his march without hesitation. The savages were in consternation at his sudden appearance almost in the heart of their country. Their dread of him was the greater because of the astonishing blow he had given them the year before at Fort Pitt, and because their scouts, who had tracked him every day, were unable to gain the least insight as to his numbers or supplies. This was the result of the peculiar order of marching and camping which he designed, much the same as that of General Wayne thirty years later. Without firing a gun, he so manœuvred that the chiefs of the Senecas, Delawares, and Shawanees came to treat for peace two days after he had halted. For this purpose the camp was

moved two miles down the river to a high bluff covered with stately timber, and affording abundant grass for his horses and cattle.

Here, on October 17th, the first council was held. The chiefs sought to throw all blame for the war upon the western nations, and sued for mercy, offering to deliver up all their prisoners. They were dismissed until the next day, Colonel Bouquet promising simply to give an answer then, but without intimating what answer he should make. Decision was then postponed to the 20th, to tighten the suspense.

On this occasion he resorted to the heroic treatment which Marin had applied to Tanacharisson at Presqu'isle. He denounced their excuses as childish. Their conduct, he told them, had been perfidious, in murdering and plundering the traders after inviting them back; attacking Fort Pitt, which had been rebuilt with their express consent; murdering the king's messengers, when such were sacred among all nations, however barbarous; and, notwithstanding their treaty with Bradstreet, continuing to keep up havoc and bloodshed on the border to that day. He taunted them with their falsehood in pretending to Bradstreet to recall their warriors and deliver up prisoners. But this, he said, was nothing new. They were habitual violators of treaties and faith.

"I am now to tell you," he concluded, "that we will no longer be imposed upon by your promises. This army shall not leave your country till

you have fully complied with every condition now to be agreed. It is in our power to extirpate you, but the English are merciful, and you shall have mercy and peace if we can depend upon your future good behavior. I have brought with me the relatives of the people you have massacred or captured. They are impatient for revenge, and restrained only by the assurances I have given them that there shall be no peace until you have given full satisfaction.

“I give you twelve days to deliver into my hands at Wakatomica” (a Shawanees town, now Dresden) “all the prisoners in your possession, without exception, English, French, women, children, and negroes. You are also to furnish them clothing, provisions, and horses to carry them to Fort Pitt.”

After this speech the council was dismissed, and Bouquet refused to shake hands with the chiefs. They were to know, he told them, that the English never took enemies by the hand until peace was concluded. He removed his army to a point near the confluence of the Tuscarawas and Wahlhonding, instead of Wakatomica, and there established a fortified camp, with a storehouse for supplies, and a council house in which to receive the Indians. Houses were built also for the reception of the captives, with proper attendants, even a matron to take care of the women and children.

The finale of this campaign was a scene hardly

matched in history, and which cannot be described here in full. On the arrival of the prisoners, there were meetings of fathers, mothers, husbands, wives, brothers and sisters, some recognizing long-lost relations, rising as it were from the dead. There were others bereaved and speechless at not meeting their lost ones. Most remarkable of all, there were numbers reluctant to be given up, and instances of Indians who parted with beloved captives in torrents of tears, clinging to them as long as they remained in camp, and bringing them daily all the gifts they could bestow. Two hundred and six were surrendered, of whom eighty-one were men, the others women and children. The last to appear were the Shawanees. On November 12th their chief and forty warriors met Colonel Bouquet in council, and with a mingling of fierce pride in their submission offered him part of their prisoners; being unable to bring the rest, as they urged, because they belonged to some great men who were absent. These, it was promised, should certainly be forthcoming at Fort Pitt in the next spring. Bouquet cut this short by demanding six of the warriors as hostages. This being granted and every demand settled, his army and the rescued captives returned on the 28th of November to Fort Pitt.

Within two months, therefore, ended this expedition, which, except that of General Wayne, was perhaps the most effective Indian campaign

in the military history of America. This meritorious officer was promoted, but he died the next year in command at Pensacola. It has been a subject of speculation what difference might have occurred if Great Britain had not lost two such officers as Bouquet and Sir William Johnson by death before the war of the Revolution.

The effect of this demonstration did not reach the tribes on the Wabash and Mississippi. There the jealous hostility of the French, and also of the Spanish at St. Louis (founded about this time as a trading post), had a pernicious influence. In 1765 Sir William Johnson sent Croghan, as his deputy, to assume formal possession and control for the king over the Indians at that extremity of his department. Croghan descended the Ohio in May with an escort of Mingoes, Delawares, and Shawanees, stopping some days at the Scioto to take custody of a number of Frenchmen who had been trading without license, and by his order had been arrested by the Delawares and Shawanees. His journal, among notes of the country through which he passed, mentions that the Shawanees town at the mouth of the Scioto, which he and Gist had visited in the winter of 1750-51, had since been swept away by a flood swelling nine feet over the banks of the Ohio. It had been rebuilt on the south bank, but abandoned during the late war, the people removing up the Scioto.

At the Wabash, Croghan and his embassy

were captured by a band of young Kickapoo and Mascouten warriors from the Maumee, at the instigation, as he suspected, of the French traders. He and his white attendants were robbed, and hurried up the Wabash ; the French at Vincennes not only manifesting no sympathy, but openly trafficking with the robbers for their spoils. But on arriving among the Miamis, the captors met with such indignation from the old chiefs as to alarm them for their own safety. The Miamis knew Croghan's office and power.

He was released immediately, and the disaster upon the whole proved fortunate. Croghan made use of it to impress the tribes on the upper Wabash and Maumee with such a sense of the king's liberality that they consented that British troops should occupy all posts which the French had held. A detachment of the Forty-second Highlanders was sent from Fort Pitt for that purpose in September. He also met Pontiac, who was crossing the country from Illinois to Detroit. This led to full explanations, and Pontiac was reconciled. He had fought the English because, as he declared, the French had deceived his people ; making them believe that the English were going to give their country to the Cherokees and make them slaves.

Croghan and his Indian escort, now reunited, proceeded down the Maumee, and held councils with the Pottawatomies, Ottawas, and Kickapoos, then occupying that valley, and with deputies of

the Twightwees, who came there to meet him. At Detroit he and Campbell, the commander, held councils with the Hurons and Chippewas, and chiefs who came from the River La Roche (Big Miami). Pontiac also appeared again; and an "ancient council fire was now kindled," as he proclaimed figuratively to the assembly of warriors, "with dry wood, that the blaze might ascend to the clouds, so that all nations might see it, and know that you live in peace and tranquillity with your fathers, the English."

In this accidental manner the conversion of the tribes of the Northwest to the British interest and allegiance was brought about far more quickly and efficaciously than Sir William Johnson or Croghan had planned. This "covenant chain" remained unbroken for thirty years. Detroit, under the British flag, continued to be the centre of control over the Indian tribes in all the territory down to the Ohio River, except that part on the Muskingum and Cuyahoga which was tributary to Fort Pitt.

British interests, however, were much vexed from Demoiselle's old haunts at Piqua. The fort had disappeared during the war, but the trading post established by Peter Loramie, a hostile Frenchman, about 1769, near by on the western branch of the Big Miami (Loramie's Fork), became a noted resort of all malcontent Indians for procuring arms and making mischief.

But the irrepressible conflict between the In-

dians and the squatters and outcasts, who had begun to congregate on the Monongahela before Pontiac's rebellion, now broke out anew. It may be called also the era of the land companies. Besides the Ohio Company, which had been dormant during the war, two other associations of Virginians, known as the Loyal and the Greenbriar companies, had been formed in 1749 and 1750 upon the promise in the king's name of immense grants of lands in western Virginia. All these companies had been suppressed by the war, and still more effectually by the king's proclamation interdicting all further land operations west of the mountains.

But the proclamation admitted of a loophole through the king's special license, and this was the opening through which these and other associations, displaying the names of many distinguished men of the time, now began to work. The strain which was brought to bear by these influences upon the king and council became severe. Sir William Johnson had set a bad precedent by accepting a gift of 40,000 acres of land in New York from the Mohawks. The most formidable of the associations was the Walpole Company, named from a member of that family who was at the head of it. It was brought into public notice by a pamphlet issued at London in 1763, entitled "The Advantages of a Settlement upon the Ohio."

Some measure now became necessary, at least

as to that part of the coveted territory south and southeast of the Ohio River, to relieve it from the embarrassment caused by the proclamation, which practically discriminated in favor of these projectors of new colonies. The result was the treaty of Fort Stanwix (Rome, N. Y.), in November, 1768, the importance of which in Western history has been much overlooked. The change to which it eventually led, not only in boundaries but in jurisdiction, makes it particularly material to the history of Ohio. A brief outline of its origin and provisions will suffice.

Sir William Johnson and his deputy, Croghan, who had leave of absence probably for the purpose, in March, 1764, submitted to the Board of Trade at London the importance of constructing a division and boundary between the colonies and the Indians further west. Croghan proposed a line to be run from the heads of the river Delaware to the mouth of the Ohio. The Lords of Trade and Plantations, however, recommended that the disposition of the Indians be first sounded. This Sir William Johnson proceeded to do by inviting a conference with the Six Nations; for he had a delusive notion that they were the monarchs and proprietors of the West. The sachems, after gravely listening to the proposal, took a day, according to Indian etiquette, to consider it, and then made themselves ridiculous, as Sir William told them, by proposing a line from Lake Champlain across to the heads of the Sus-

quehanna; not the line, by any means, which the movers in this enterprise desired. On second consideration they came nearer the mark by offering the line of the Ohio River from the mouth of the Tennessee up to Adigo (Kittanning), on the Alleghany, thence to Shamokin on the Susquehanna, and up that river and its eastern branch to Owego. This, Sir William thought, would do for the present. In his concluding speech he took pains to refer to it as offered of their own free will, and exhorted them to be faithful to their engagement, for the French and Spanish were already busy in stirring up the opposition of the western Indians. To this the Onondaga speaker, an important functionary, replied that they had the matter much at heart, and would acquaint the nations at the Ohio of their resolution at a public meeting in the Shawanees country, where these nations held their councils, and did not doubt of reconciling all of them to it. This ought to have been sufficient to apprise Sir William Johnson of the fallacious ground upon which he was proceeding.

Some of these tribes, the Senecas, Delawares, and Shawanees, had just been in council with him, as they had promised at their meeting with General Bouquet in the previous year. Croghan also had been in conference with them in May, 1768, at Fort Pitt. But no allusion to the new boundary had been made on either of these occasions. It was observed, moreover, in this confer-

ence at Fort Pitt, that the Shawanees, in presence of Croghan and the deputies of the Six Nations, boldly asserted that the country down the Ohio was owned by the tribes living there, and they called upon the Pennsylvania commissioners to stop their people from going there until these tribes were spoken to.

Sir William Johnson's success with the Six Nations gave a new impulse to the land companies. The Walpole Company had been revived in 1766, with Governor Franklin of New Jersey at the head, and Sir William among its promoters. Dr. Franklin, the governor's father, was in London at the time, and the company obtained his agency in an endeavor to secure the grant. The territory which they sought lay on the east side of the Ohio, extending from a point opposite the Scioto up to the Pennsylvania line, and was to be bounded on the south by a line passing from Cumberland Gap northeasterly to the confluence of New River with the Greenbriar, and thence to the Alleghany ridge. This would have shut Virginia out of the valley of the Kanawha. Dr. Franklin pressed the application, but owing to a change of ministry it was suspended some years.

Another colony of still larger proportions was projected in 1766. In this also the names of the Franklins and Sir William Johnson appeared, with those of General Gage and some leading fur-traders at Philadelphia. Their proposal was for all the territory between the Ohio, the Mississippi,

and the Wabash, to be bounded on the north by a line extending from the mouth of the river Wisconsin to the mouth of the Maumee. This plan was easily defeated by Lord Hillsborough, then head of the Lords of Trade and Plantations, who was the uncompromising opponent of all the companies.

The most formidable resistance to these enterprises arose from the claimants of the military bounty lands promised by the proclamation of 1763, and by Governor Dinwiddie's guaranty in 1754, of a grant of two hundred thousand acres to the officers and soldiers who went out under Washington to resist the French. Washington, for himself and these claimants, urged all his influence against the monopolies proposed, and by letters addressed to Governors Botetourt and Dunmore and other authorities, obtained for his men large grants in the Kanawha valley under Dinwiddie's pledge.

But another set of land operators was at work during this contention, whose proceedings admitted of no further postponements of the boundary question. Without regard to the king's proclamation, or the savages, the frontier people, chiefly Virginians from the Potomac, had crossed the mountains and built their cabins on Cheat River, and as far down as Redstone (Brownsville) on the Monongahela. This action created the utmost hostility among the Indians. General Gage ordered the settlers to be expelled, and in the

winter of 1766-67 addressed sharp remonstrances to the governors of Pennsylvania and Virginia. He warned them that the certain consequence of these lawless outrages by their people would be another carnage on their frontier. But he might as well have forbidden the fish to swim down the Ohio. The squatters paid no attention to his authority.

The provincial authorities in Virginia, however, were alarmed by advices that John Stuart, the king's superintendent of Indian affairs at the south, was treating with the Cherokees for another boundary, which would restrict the province as seriously as the Walpole colony. This "ministerial line," as it was called, had in fact been settled between the Board of Trade and the Cherokees before the treaty of Fort Stanwix, extending from the mouth of the Kanawha south to Chiswell's Mine, on the line of North Carolina, and thence through the Carolinas and Georgia to the St. John's River in Florida. It was in view of this danger that Virginia now took a close interest in the Fort Stanwix business.

The king's order in council to Sir William Johnson, January 5, 1768, was explicit that "the boundary line between the several provinces and the various Indian tribes be completed without loss of time, conformably with the report of the Board of Trade, and that he consult the governors of the different provinces concerning such points as may affect them separately." The re-

port of the Board of Trade, March 7, 1768, with which he, as commissioner, was thus ordered to conform, referred to the "establishment of certain new colonies." They recommended that the king adopt the boundary laid down upon the map annexed to the report, which was plainly marked as extending from Owegy at the east to the mouth of the Connahway (Kanawha) at the west, and there turning south to Florida; in other words, adopting Stuart's or the "ministerial line." The order in council related not only to the Indian boundary, but also to the boundaries to be set between the old colonies and the new ones contemplated.

A large concourse of people, Indian and white, attended the treaty convention, October 24th, at Fort Stanwix. Together with Sir William Johnson as the king's representative, Franklin, the governor of New Jersey, Richard Peters and James Tilghman, commissioners for Pennsylvania, and Thomas Walker, commissioner for Virginia, took part in it. "Sundry Gents from different colonies" also attended, as the official report quaintly adds. Dr. Walker was the first to present his credentials from the governor of Virginia, expressly authorizing him "to be commissioner of Virginia to settle a boundary line between this colony and the colonies of Pennsylvania and Maryland, and the several nations of Indians concerned." The Pennsylvania commissioners were in like manner accredited.

Without wading through days of tedious ceremony and speech-making, it need only be said that on the 1st of November the deputies of the Six Nations, with the map before them, announced as their final resolve that the boundary line between them and the British colonies should begin at the mouth of the Cherokee (Tennessee) River, then go along the southeast side of the Ohio to Kittanning, from thence to the head of the west branch of the Susquehanna and so on to Owego, as originally proposed, but now extending it so as to terminate at Wood Creek, near the fort. This they offered in consideration of £10,460 7s. 3d., to be paid by the king to the Six Nations. A deed of cession, accordingly, "to their Sovereign lord and King George Third, his heirs and successors, to and for his and their own proper use and behoof," was formally executed by the chiefs of the confederacy November 5th, and attested by Sir William Johnson, the governor of New Jersey, and the commissioners of Pennsylvania and Virginia. At the same time, and as part of the treaty, separate grants were made to Pennsylvania in consideration of ten thousand dollars for all the territory west of the Susquehanna, besides certain tracts to Croghan and others as gifts of the Six Nations.

It was altogether an extraordinary transaction. The boundary established was in direct violation of the order in council, and the line agreed upon with the Cherokees. Virginia, instead of being cooped up by the "ministerial line," gained the

whole of Kentucky. The material point at present, however, is, that the north boundary of western Virginia, as thus fixed by her own procurement and consent, was limited to the southeast side of the Ohio River, or the south side, as expressed in the deed. The cession to Pennsylvania was equally conclusive upon all the parties. The king at once disapproved the treaty, but did not disavow it; such was the powerful hold which, in Indian affairs, Sir William Johnson had upon the government. In his report enclosing the treaty, he vindicated himself on the ground that the Six Nations had insisted that they, and not the Cherokees, owned the Ohio down to the Tennessee, and would not be satisfied unless their cession extended there. But he advanced a more singular apology, that "he was only concerned lest the Virginians, especially those on the frontier, should take possession and begin settlements on these lands," south of the Ohio. Many persons, of consequence, he added, were induced to promote these frontier people; and in support of this he intimated that "he saw a deed in the hands of the Virginia commissioners for great part of these lands, which they assured me had formerly met with encouragement from his late Majesty and the then ministry, of which numbers were determined to avail themselves forthwith. This did not a little contribute to induce me to accept the cession of the country, to prevent the general ill consequences which must attend such settlements without the Indians' consent."

The apocryphal deed so effectively used has never come to light, but the "Virginia commissioners" evidently had the upper hand in adjusting the boundary. The king yielded to these persuasive reasons, and in December, 1769, ratified the treaty, except as to the private grants to Croghan and others, which were rejected. They were afterwards urged upon Congress, but without avail.

The land companies now redoubled their exertions at London. In December a new one, styled the Mississippi Company, composed of forty-nine leading Virginians, Colonel George Washington among them, sent a petition to the king for a grant of two and a half million acres of land between the mountains and the lately established boundary. This petition was referred by the Privy Council to the Lords of Trade and Plantations, and there it disappears. But the Walpole Company was more successful. In spite of Lord Hillsborough's strenuous opposition, Dr. Franklin's appeal for the new colony, the ablest tract it has been said which he ever wrote, was so effective that by an order in council, August 14, 1772, a grant was authorized of the whole territory southeast of the Ohio, from the Pennsylvania line down to a point opposite the mouth of the Scioto; "to the end," it was declared, "that the same may be settled, and such settlement and district erected into a separate government, as the Board of Trade shall advise and the King approve."

Virginia would thus have lost the opening she had gained at Fort Stanwix. The order in council in favor of the Walpole Company was transmitted to Sir William Johnson, that he might obtain the consent of the Six Nations, according to his established routine. About the same time a compromise was effected between the Walpole and the Ohio companies, and the latter was merged in the former. But in the revolutionary storm now impending, both of them perished, and Virginia took quiet possession of the field of all this rivalry and intrigue, to which she had submitted without opposition or complaint. But besides arousing the land speculators, the treaty of Fort Stanwix had set the Indian tribes beyond the Ohio in a blaze of jealousy by depriving them of a voice or of any share in the largess unduly bestowed, as they thought, upon the Six Nations. A still worse cause of exasperation was the horde of borderers of the baser sort thus incited to move down upon the rich lands south of the Ohio, and who scrupled not to cross the river and exercise their lawless rapacity there also. These savages regarded Indians as having no rights, and killed them as indifferently as they would snakes.

The deadly struggle thus aroused, as the French had foretold, soon settled down into a twenty years' war, fought by the Indians to save the line of the Ohio itself. The Shawanees took the lead in continuous raids, murders, and robberies north and south of the river. At the general congress

of the western tribes which was held at the Scioto Plains (Pickaway) in the summers of 1771, 1772, 1773, successively, they strove to reunite these tribes in a general war of extermination upon the English. Sir William Johnson, having been somewhat censured by Lord Hillsborough for misleading the ministry in respect to the relations between the western tribes and the Six Nations, sent deputies who succeeded in detaching the more distant tribes; but the Shawanees, Wyandots, Senecas, and a majority of the Delawares, persisted in their hostility. In this way all • were easily converted by the English commandant at Detroit and his emissaries, during the Revolutionary War, into unrelenting enemies of the colonies. One of the calamities resulting from it was the destruction of the Moravian missions on the Muskingum.

It was believed that the war of Lord Dunmore and the Virginians against the Shawanees in 1774 was not merely to punish them for their retaliation for the murder of Logan's relations and other Indians on the upper Ohio that summer, though that ostensibly was his object. Some obscurity must remain until Lord Dunmore's papers, and the contemporaneous documents in the state paper archives at London, are more fully brought to light. Not only the butchery and captures by the Indians in the back parts of Virginia for years, and the ugly dispute between Virginia and Pennsylvania about the territory at the head of the

Ohio commenced by Dinwiddie, but also the growing difficulties between the crown and the colonies, which at this time were becoming critical, may all have furnished him with motives. It was the firm belief of Virginians, including many of Dunmore's officers and men, that the expedition was contrived with a deliberate intention of sacrificing them and gaining favor with the savages, in order that these might aid the mother country in the event of a war. The justice of this suspicion seems doubtful, from the fact that the Virginia convention, in March, 1775, passed a vote of "cordial thanks to their worthy Governor, Lord Dunmore, for his truly noble, wise, and spirited conduct in the late expedition against our Indian enemy." General Andrew Lewis and Colonel Christian, two of his officers, were members of that convention.

The plan for this invasion of Ohio was, that General Lewis, with three regiments, should descend the Kanawha, and be joined at the mouth of that river by Dunmore and his forces, who were to advance from the northern counties by way of the Ohio. Lord Dunmore lost time in dallying with the Senecas and Delawares at Fort Pitt, and dispatched three traders with an order to Lewis to march immediately for the Chillicothe towns (Scioto), Dunmore intending to land at the mouth of the Hockhocking, and march to the same point. Lewis received the express October 9th, but at sunrise the next morning was stormed in his camp

by the confederate Shawanees, Delawares, and Mingoes, commanded by Cornstalk, the great war chief of the Shawanees. They had silently crossed the river in the night. Lewis's scouts for four days had discovered no sign of them. All that day a desperate battle was fought by the Virginians, who were hemmed in between the two rivers. At dark the Indians retired as noiselessly as they had come, having discovered the approach of a fresh regiment from Fincastle.

Dunmore and his weaker force, after throwing up a fortification at the mouth of the Hockhocking, were permitted to march undisturbed to Sippo Creek, a tributary of the Scioto (near the line between Ross and Pickaway counties), and there, at his fortified camp (Charlotte), had received the submission of the Shawanees. Their messengers, suing for peace, had set out to meet him at the Hockhocking, whilst Cornstalk was executing his quick flanking stroke at the other wing. In skill and strategy, nothing superior to this had occurred in Indian warfare.

The approach of Lewis to Camp Charlotte was discovered by the savages with terror. Dunmore sent an express to inform him of the pacification, and with orders to return to Virginia. Lewis, it is said, continued to advance until met by Dunmore in person, with his staff. He then halted, in bitter disappointment, and fell back to Fort Gower, at the mouth of the Hockhocking, whether by himself, or together with Dunmore's force, does not appear.

Here, on the banks of the Ohio, November 5, 1774, at a meeting of officers "for the purpose of considering the grievances of British America," emanated the following resolutions, afterward published in the "Virginia Gazette": —

"Resolved, That we will bear the most faithful allegiance to his Majesty King George the Third whilst his Majesty delights to reign over a free people; that we will at the expense of life and everything dear and valuable exert ourselves in support of the honor of his Crown and the dignity of the British Empire. But as the love of liberty and attachment to the real interests and just rights of America outweigh every other consideration, we resolve that we will exert every power within us for the defense of American liberty, and for the support of her just rights and privileges; not in any precipitate, riotous, or tumultuous manner, but when regularly called forth by the unanimous voice of our countrymen.

"Resolved, That we entertain the greatest respect for his Excellency the Right Honorable Lord Dunmore, who commanded the expedition against the Shawanese, and who we are confident underwent the great fatigue of this singular campaign from no other motive than the true interest of this country."

Lord Dunmore's treaty, as it is commonly styled, was really no treaty. It was agreed that he should meet the deputies of these tribes at Fort Pitt in the following spring for the purpose

of forming one. By that time he was involved in deeper troubles. The campaign accomplished but little. The Indians promised to surrender their captives and plunder, and that they would not hunt or make any more predatory incursions south of the Ohio. The Mingoës attempted to evade the issue by stealing off, but were overtaken by a strong detachment under Major Crawford at the salt lick town (Franklin County), and severely punished.

Several characters figured in this campaign who afterwards became notable. Besides General Lewis and his colonels, there were younger men, such as Daniel Morgan, George Rogers Clark, William Crawford, Simon Kenton, and Simon Girty. It was on this occasion also, and at Camp Charlotte, that Lord Dunmore received the celebrated speech of Logan, the Mingo warrior; the little gem of natural eloquence which was reproduced by Mr. Jefferson, in his "Notes on Virginia," as "challenging whole orations of Demosthenes and Cicero, or any more eminent orator, if Europe has furnished any, to produce a passage superior to it." Notwithstanding Mr. Luther Martin's rude aspersions in gratifying his feeling against Mr. Jefferson, the authenticity of the speech is clearly traceable, though its genuineness may have been marred by over-zealous translators or copyists.

Logan took no part in the conferences, but was sulking near by. Girty was sent to him by Lord

Dunmore with a special invitation, but failed to bring him. Colonel Gibson was then sent, and through him the speech was returned. Kenton and Girty had once been comrades at Fort Pitt, and now renewed their acquaintance. Four years later it took a dramatic turn, in which Logan also had a part, and it is worthy of note as furnishing the last that is known of this singular being. Kenton, in 1778, was captured by the Shawanees in one of his scouting excursions, and being doomed to the stake was taken to Wapatomica, on Mad River. Girty happened to come there, and, seeing the prisoner with his face blackened, demanded his name. On discovering that it was Kenton, the hardened savage, usually regarded as relentless, embraced him and wept aloud, assuring him he would save him if he could. He caused the council to be reassembled and made a speech, which Kenton, eagerly watching the countenances of his judges, could see was moving them. Girty, when he concluded, received a unanimous grunt of approval. He took Kenton to the store of the British traders, and fitting him out with new clothing, horse and saddle, rode with him around the neighboring towns for some days, receiving congratulations. By ill luck a war party came in, which had lost severely in a fight with the whites. Kenton was demanded as a victim of their vengeance, and no entreaties of Girty could save him. But as a favor to Girty the council agreed that the burning should be at Upper Sandusky, then the

place for payment of British annuities, gifts, and favors.

At the crossing of the Scioto, where Logan at this time had his cabin, the guard stopped overnight. Happily the great chief was at home, and in course of the night visited Kenton. In the morning he detained the guard, and informed Kenton that he had sent two young men ahead to speak a good word for him at Sandusky. When the guard set off the next day, Logan shook hands with the prisoner at parting, but said nothing as to his fate. On arriving at Sandusky they were met by the whole Indian population, but Kenton was spared from running the gauntlet. The council assembled for his fourth ordeal, and was about to consign him to execution, when Peter Druyer, a Canadian captain in the British service, a man of influence and much tact with the Indians, and noted for his humanity, appeared in full uniform. This was Logan's device, and it had complete success. Druyer in a flattering speech applauded the Indians for their great success against the Americans, the cause of all this bloody and distressing war. No punishment could be too severe. But this prisoner was a man of the very utmost importance to the commandant at Detroit. He possessed information of more value to the allies for conducting the war than the lives of twenty ordinary prisoners. He urged, therefore, that Kenton be sent to Detroit for examination first, and then brought back for

his doom. As his captors had been put to great trouble, Captain Druyer supplemented his speech by offering them one hundred dollars at once, in tobacco, rum, etc., assuring them of his confidence that the commandant would, on delivery of the prisoner to him, increase it to their entire satisfaction.

Kenton was sent on to Detroit, and the commandant, it is needless to say, had no difficulty in sending the guard back quite contented without him. If McDonald is right as to the time of this occurrence, the commandant must have been Hamilton, who was himself the prisoner of George Rogers Clark a year later.

While the Dunmore campaign was going on, the first Continental Congress had met at Philadelphia, and sent forth their memorable manifestoes of grievances. Another event had occurred earlier in the year, unknown to Lord Dunmore, which totally changed the political status and relations of the country which he had been invading. Parliament, on June 22d, had passed an act "making more effectual provision for the government of the Province of Quebec," hence known as the Quebec Act. By this the whole country bounded by the Ohio, the Mississippi, and the lakes west of the west line of Pennsylvania, was annexed and made part of that province.

The declared object of this measure was to extend the boundaries and government of Quebec, so as to secure and satisfy the French inhabitants

at Kaskaskias, the Wabash, and Detroit. They had remained there under faith in the pledges given to them by the king in the Treaty of Paris and the proclamation of 1763, but had for ten years been left without any civil government or privileges whatever. Moreover, the provisions made for the Quebec government in the proclamation had been found inapplicable to its people and circumstances; the French being wholly unused to popular representation and other English institutions, and particularly averse to trial by jury. All this was changed, and the administration committed to the governor and council and the courts, to be conducted according to the system of laws and local tribunals established in Canada. Judge Burnet observes that the French in Michigan, under the Ordinance of 1787, complained loudly of the American courts and their slow, tedious proceedings, with juries and interpreters to speak for the witnesses.

The Quebec Act extended to all inhabitants of the province the free exercise and enjoyment of the religion of the Church of Rome, subject nevertheless to the king's supremacy. The clergy of that church were to have their accustomed dues and rights with respect to such persons only as professed that religion; provision being reserved also for such maintenance of the Protestant clergy as the king should deem expedient and necessary.

This act was denounced, in and out of Parlia-

ment, as arbitrary and dangerous ; and yet, though debated by the most eminent men in both houses, was suffered to pass, by the insignificant vote of fifty-six against twenty in the House of Commons, and twenty-six against seven in the House of Lords. One of these seven was Lord Chatham, who assailed it as "a child of inordinate power," and, holding up the religious part to the bench of bishops, he asked if any of them "would hold it out for baptism." The Continental Congress also viewed it in that light ; not quite the spirit of tolerance which might have been expected of the Sons of Liberty, animated in some degree, perhaps, with the temper of sour grapes. Motives in politics do not always bear inspection.

The truth was that Parliament, by the Quebec Act, simply made good what the king had promised in 1763, in order to prevent a general exodus of the French of Canada, Detroit, and Illinois to Louisiana ; and this new government, like that which was temporarily imposed by the Ordinance of 1787, was well adapted to an immense country with no population. Such an unexampled concession of religious liberty placed Parliament at an advantage. Even though the motive were to divide the French from the English colonies in the rising insurrection, it must be admitted to have been a legitimate measure of policy.

Ohio was now transferred back to its old connection with Canada, and so remained until the treaty of independence in 1783. The jurisdiction

was but nominal, and wholly military. Prior to the Ordinance of 1787 there is no trace of a magistrate or civil officer in Ohio, either French, English, or American, unless it were those of the "squatter sovereigns" on the Upper Ohio, to be mentioned in another chapter.

CHAPTER VI.

THE MORAVIANS.

THE villages planted by the Moravian missionaries on the banks of the Tuscarawas River, in 1772, are fairly entitled to rank as the first settlements in Ohio. Numbers of white people inhabited the country before them, but without law or order; unknown to the world, and even to each other. Many a "first white child" had been born in these wilds before the little Moravians, John Lewis Rothe, 1773, and Joanna Heckwelder, 1781. They, however, were but waifs and strays, the place of whose nativity "knoweth them no more." The claim formerly made for Marietta as the earliest settlement, is clearly incorrect. In legal phrase, it is estopped by its own record. The grant by Congress to the Ohio Company in July, 1787, which included Marietta, and the ordinance in 1785 by which the first surveys and disposal of the Western lands was directed, expressly excepted and reserved the Moravian villages and the lands surrounding them, ten thousand acres in all, for the Christian Indians "formerly settled there." The title was vested by the United States in the Moravian Brethren at Bethlehem, Pennsylvania,

for civilizing the Indians and promoting Christianity.

The Moravians thus were not only officially recognized as settlers, but the irregularity of their possession, which has been supposed technically to debar the recognition of them as settlers, was removed. The gift was subsequently enlarged to twelve thousand acres, and in 1823 was all reconveyed to the United States, the churchyards, cemeteries, and a few special leases excepted.

The Moravian Church arose far back in the reaction of the Waldenses and Bohemians, prior to the Reformation. The Hussite War had led to inhuman excesses on both sides. A little sect in Bohemia and Moravia, turning aside from these bloody contentions, humbly sought a purer doctrine and worship, and attempted, with what light they had, to frame their faith upon the love and law of Christ, styling themselves *Fratres Legis Christi*. But as this bore the appearance of a monastic order, they adopted the name of the United Brethren, "*Unitas Fratrum*." The "daily Word" was the feature and guide of their daily life. It was a text from the gospels for each day's meditation, and the striking coincidences which turned upon this book are much referred to in their histories. Another peculiarity which they adopted from the primitive Christians was that of submitting to lot all questions likely to breed contention, believing this to be the will of God.

Their church government was episcopal. Their

tenets were few and simple; binding them to a circumspect life and discipline, and especially calling on them to bear all things for conscience' sake. Instead of defending themselves by force and arms, as the Hussites had done, the height of their faith was to rely upon prayer and remonstrance only, against the rage of their enemies. They refused to perform military duty and to take oaths in court. It is a harsh reflection upon human nature, but wherever they went, this became the chief cause of their misfortunes. They made little account of other dogmas, but welcomed all who trusted with them in the merits and sufferings of Jesus. Every trait in His character and life was dwelt upon in their devout contemplations. They sought especially to awaken religious sensibilities by holding up the crucifixion and suffering, by the liveliest and most ardent pictures of fancy. These passionate appeals, and the sweet devotional poetry and music which they cultivated so highly, contributed in no small degree to deepen such impressions. The faith they sought to implant was mainly through love.

To go in this panoply before the wild Indians of America, it must be admitted, was proof of great faith, and the seeming incongruity required thus much to be said of them. Strangely, the direction thus taken, and the sensibilities thus appealed to, proved to be precisely adapted to the Indian nature, and had a power which, under different circumstances, might have made a different history for the red man.

Guided by Count Zinzendorf as bishop, they adopted foreign missions as their vocation, sending their preachers to Greenland, to the West Indies, and in 1735 to Georgia. But Oglethorpe's border war with the Spaniards compelled him to call every man in his colony to arms, and the Moravians, rather than forsake their principles, abandoned their lands and escaped to Pennsylvania. Here some of their brethren were already fixed. Among the refugees was the young David Zeisberger, the future head of the Ohio missions. Bethlehem on the Lehigh became, and is yet, the centre in America of their double system of missions and education. They bought lands, laid out villages and farms, built houses, shops, and mills, but everywhere, and first of all, houses of prayer, in thankfulness for the peace and prosperity at length found.

The first mission established by Zinzendorf in the colonies was in 1741, among the Mohican Indians, near the borders of New York and Connecticut. The bigoted people and authorities of the neighborhood by outrages and persecution drove them off, so that they were forced to take refuge on the Lehigh. The brethren established them in a new colony twenty miles above Bethlehem, to which they gave the name of Gnadenhütten (Tents of Grace).

The prosperity of the Mohicans attracted the attention and visits of the Indians beyond. The nearest were the Delawares, between whom and

the Mohicans there were strong ties of affinity, as branches of the old Lenni Lenape stock. Relations were thus formed between the Moravians and the Delawares. And by the fraternization between the Delawares and Shawanees already referred to, and their gradual emigration to the West to escape the encroachments of Penn's people, it occurred that the Moravian missionaries, Zeisberger foremost, accompanied their Delaware and Mohican converts to the Susquehanna in 1765, and again, when driven from there by the cession at Fort Stanwix, journeyed with them across the Alleghanies to Goshgoshink, a town established by the unconverted Delawares far up the Alleghany River.

Here heathen conjurers and preachers were practicing abominations, which in Zeisberger's eyes showed that Satan had chosen this place as his throne. He and his Indian assistants also preached, denouncing their falsehoods and deceptions with most fearless severity. Zeisberger would then turn to the Indians, and melt them to tears by his vivid pictures, in their own language, of the mercy and grace which was in store for repentant sinners. One of these scenes was made the subject of Schussele's historical painting "The Power of the Gospel." These persuasive appeals, and such hymns, also in the Delaware language, as never before had reverberated among the hills of the Alleghany, brought numbers of visitors to hear and see this new worship.

One of these became the most distinguished of the converts and supporters of the missions in Ohio. This was Glickhican, a leader of the Delaware warriors, who by his captivating address and power of speech had become the chief counselor and orator of Pakanke, chief of the Wolf clan of Delawares at Kuskuskee, on Big Beaver Creek. He had heard of Zeisberger's victory over the sorcerers at Gosgoshink, and now came purposely to silence him.

He and some brother chiefs who came with him to witness the triumph were entertained at dinner by the Indian brother Anthony, who was also burning for this combat, and could not repress a few well chosen words as to sin and salvation. Glickhican was impressed with his earnestness, but without any reply went to the daily meeting. And now occurred a phenomenon which still puzzles most men, and was more than the superstition of an Indian could bear.

As he entered, he suddenly conceived that the very scene he now beheld had appeared to him before : Indians with plain hair, without rings in their noses, assembled in a large room ; in their midst a short white man, who, presenting him a book, desired him to read, and upon his replying that he could not read, the white man had said, "After you have been with us a while, you will learn how to read it." Therefore, on entering the room and seeing the Indian congregation, and a short white man (Zeisberger) holding a book,

all answering the vision he had seen or dreamed, he was overcome with astonishment and retired. On returning to Kuskuskee he related this discomfiture to his brother warriors, and they were equally confounded.

The Moravians were invited by Pakanke, in a few months, to come to the Big Beaver; and in April, 1770, transferred themselves to their new home, to which they gave the name of Friedenstadt. But now, besides the enmity of the sorcerers, they encountered a storm of wrath from Pakanke, caused by Glickhican deserting and joining himself to the Moravians as a convert. His old companions on the war-path, as well as the chief, were implacable. Pakanke taunted his late captain and counselor with ingratitude. "Were you not a brave," he exclaimed, "and honored by sitting next to me in council? And now you pretend to despise all this, and think you have found something better. Some time or other you will find you were mistaken." Glickhican bore it quietly and replied: "I have gone over to them, and with them I will live or die."

To remove the prejudice that had been formed, the Moravians declared that, though their converts renounced war and hostile expeditions, they would willingly contribute a full share of the general burden and expense attending the welfare of the Delawares in time of peace. They imposed as a condition, however, that the council and their chiefs and captains must claim

no authority over the missionaries, but leave them, and those who should come from Bethlehem to fill their places, full liberty to come and go where they pleased.

This amend, probably suggested by Glickhican, gave great satisfaction. The Monsys, on the Alleghany, sent a deputy to inform the Wolf tribe, on the Beaver, that they had adopted and naturalized the Moravian brethren as Delawares, desiring Pakanke to confirm the message and send it forward to the western Delawares, and the Shawanees also, that the covenant might be duly kept. Pakanke complied, and relented so far as to depute the messenger to go back to the Susquehanna, and invite all the Christian Indians to come out to Kuskuskee, and build a town where they pleased.

But though the chiefs were conciliated, the hostility of the warriors and populace increased. It was discovered in fact that the Moravian colony had run into the toils of the men who were their deadliest enemies. The Beaver and the Upper Ohio had long been the stronghold of the lowest class of traders, who abhorred the Moravian missions as fatal to their interests, especially as regards the traffic in spirits. A more miscreant and corrupt horde, in general, probably never defiled the earth. Uncontrolled by the provincial governors, — indeed, rather patronized by most of them “in the interest of trade,” — their horse trains, laden with rum, could gain access where

other white men dared not go. Among their frauds, they propagated the report among the Indians that Zeisberger intended to sell his converts to the Cherokees as slaves.

These adversities determined the Moravians to plunge a step further into the wilderness, and go to the head chief of the Delawares at Gepelemukpechenk (Stillwater, or Tuscarawi) on the Muskingum. It was near this village that Christian Frederick Post, the brave, enterprising pioneer of the Moravians, had established himself in 1761, with the approbation of the chiefs, after two important embassies among them as agent for the governor of Pennsylvania. By marriage with an Indian wife he had forfeited his regular standing with the congregation. His intimate acquaintance with the Indians, and their languages and customs, so far gained upon them that in 1762 he was permitted to take Heckewelder to share his cabin and establish a school for the Indian children. But in the autumn the threatened outburst of Pontiac's war had compelled them to flee.

The Delawares, it is to be remembered, were of three tribes or totems — the Turtle, the Turkey (Monsys), and the Wolf. On the Alleghany and Beaver they were chiefly Monsys. On the Muskingum they were of the Turtle and Wolf mingled. Old Netawatwes (New-comer), the chief at Tuscarawi, was now head chief of the nation.

Zeisberger and his Indian assistants were well received by him, and by most of his council. He

gained his point, but the chiefs were not of one accord, as will unhappily appear all along until the end. Early in the following year (1772) the colony was invited by the council at Tuscarawi, the Wyandots west of them approving it, to come with all their Indian brethren from the Alleghany and Susquehanna, and settle on the Muskingum (as the Tuscarawas was then called), and upon any lands that they might choose.

The United Brethren, east and west, took counsel together, and obeying this call, as they interpreted it, Zeisberger and some of the assistants, who were the executive and police department in the little state now forming, were sent over to the Tuscarawas in March to spy out the land. They entered at the beautiful stretch on the eastern bank between Tuscarawi and the confluence of the Wahlhonding and the Tuscarawas rivers, which Gist had traversed in 1750, and Bouquet's army in 1764. The prospect filled them with delight. The rich soil, the fine timber, a large spring, which they specially admired, and the great abundance of game, afforded all the indications most to be sought for in an Indian colony.

Journeying onward some twenty miles up the river from where they had entered, they came to the Delaware capital. Their gratitude to the chiefs for the boon they had offered was fitly acknowledged, and on venturing to state the choice of land they would like, if permitted, there was a mutual pleasure on discovering that it was

the very same which the Delawares were intending for them. The chiefs gave them some miles on the eastern bank, between their village and Stillwater Creek, with the guaranty that no other Indians should intrude there, and that there should be no molestation of the Christian Indians or the missionaries, or of any persons attending their worship. The Moravians established a condition, of equal force, that no white settlers should be admitted but those associated in the missions.

The pioneer party, in the removal from the Beaver to Ohio, consisted of Zeisberger and five Indian families, twenty-eight persons, who arrived at this beautiful ground May 3, 1772. Words could not tell the devout joy of the missionary and his little flock on alighting at this long-sought refuge, as they trusted it was to be. The clearing of the forest, and erection of temporary cabins, began the next day; and what shows the growth of these neophytes in tilth and thrift, as well as in grace, it was but a few weeks before they had fields and gardens of the fresh soil sown with crops of grain and vegetables, and the town commenced. The site was at the large spring, and appropriately it was named for it Shoenbrun.¹

¹ Shoenbrun (beautiful spring) was about two miles southeast of New Philadelphia. The centenary year of the settlement was celebrated appropriately. Mr. Jacob, the owner of the spring, dedicated it, with the large elm overhanging it, to the Union Bible Society, for preservation, and a memorial stone with suitable inscriptions was planted near by it.

In August arrived the missionaries Ettwein and Heckewelder, with the main body of Christian Indians who had been invited from the Alleghany and the Susquehanna, about two hundred and fifty in number. These sent a delegation up to Tuscarawi to give the chiefs notice of their arrival. Their speech of gratitude, and the usual compliments, passed off with perfect success. Zeisberger and an escort of the Indian brethren, also, went down the Muskingum to Waketamika (Dresden), then a Shawanees town, to propitiate their good graces. The Shawanees received them with much respect and favor, and attended Zeisberger's preaching in great numbers. Readers of Indian history will distinguish this from another town of the same name on Mad River, and also the several Wappatomicas and Wappakonetas, which, like Chillicothe, were towns of number.

This, and further accessions from the east in September, made it advisable to divide the colony into two villages. The second was established ten miles below Shoenbrun, on a high bank of the river. As it was allotted chiefly to the Mohican new-comers, Shoenbrun being occupied by the Delawares, the Mohican village took the name of Gnadenhutten, from their old home on the Lehigh. In April, 1773, the remnants of the mission on the Beaver joined their brethren in Ohio. The whole body of the Moravian Indians, so long sundered and scattered by the bigoted persecutions of white men, was now united and at

rest under the shelter of the unconverted but more tolerant Delaware warriors.

The plan of Shoenbrun, the other villages being also laid out much in the same way, was a broad street extending from the river into the fields, and another at right angles from this, at some distance from the river. At their intersection stood the church, probably the first built in Ohio, forty feet by thirty in dimensions, made of squared logs and shingled roof, and rising above it a turret mounted with the church-bell. The church, at each of the villages, was the building first completed, and their consecration was made by Zeisberger an occasion of great solemnity. Houses of hewn logs for residences were then erected, at intervals sufficient to permit a garden for each, and before winter were ready for occupation. Besides the church, there was in each village a schoolhouse, and also a long, commodious building for the entertainment of Indian visitors and wayfarers in their fashion. Hospitality was a prime virtue of the Moravians, and the plain but abundant fare which their Indian housewives knew how to spread before their guests became famous throughout the border.

The fundamental conditions established between the Moravians and the Delaware chiefs have been stated. Their internal polity, secular as well as spiritual, is worthy of admiration, and in some degree may be inferred from the sketch given of the precepts and example upon which

the whole Moravian economy was founded. Their circumspection of life was not to be occasional only, but the "daily word," and the daily church service, constantly drew their hearts and minds to the one great exemplar whom they followed. They had an external government and policy also, which was managed by the helpers, or "National Assistants," — leading Indian brethren, in consultation with whom the missionaries constituted the council of government. Twenty "rules of the congregation," which were adopted by this authority, were at the commencement of each year read in public meeting, and required to be adopted by the whole congregation. No new member could gain admission without a solemn promise to conform to them strictly. If any of the congregation gave offense or disturbance, it was the office of the Assistants to admonish the person in a friendly manner. If persistent or rebellious, it was for them to judge whether or not expulsion should follow. The lands, houses, and crops of the colony were common property. But these rules evidently allowed private property to some extent. "Harm to the cattle, goods, or effects of another subjected the offender to pay damage." The purchase of goods or articles from warriors, knowing them to have been stolen or plundered, was punished by expulsion.

Besides these cardinal laws there were police regulations as to attendance at church and school, visiting the sick and poor, the levy of contribu-

tions for the common benefit, etc. The schools were administered with exceeding care, spelling-books and readers being prepared by Zeisberger, and printed in the Delaware language. Village communities of Indians living under restraints and influences like these might have diffused Mr. Matthew Arnold's creed of "sweetness and light" very far among such tribes as were then inhabiting Ohio. The neighboring Indians were soon attracted by this novel scene. It was not by a change of heart only that the brethren counted upon the efficacy of their cause. Through the door and school of industry they sought to draw the Indians to the closer ties of Christian peace, order, and love. A powerful auxiliary behind this, upon which they counted for the consummation of their work, — one always interesting to the savage, and which soon gave the Christian Indians a most captivating advantage in the eyes of their savage neighbors, — was that they always had plenty to eat. It was their farms and shops, their industrial training and pursuits, their comfortable houses and homes, along the banks of the Muskingum, which attracted the Indian attention. These men, to be sure, would not fight, and this excited wrath and bickerings when war parties were to be raised and they refused to go out. But year by year the hungry, foot-sore warriors, in their marching to and fro, saw these peaceful fields, teeming with harvests and dotted with cattle, horses, and pigs, and were glad to stop and

swallow their indignation with the hearty fare and welcome always ready for them at the Moravian villages. Still more grateful were the sick and wounded laggards, who were often received in the hospital and nursed by the "single sisters." These intrusions were not unwelcome to the brethren, but rather courted. It was their policy to attract visitors, as these never failed, such was the responsive courtesy of the Indian, to attend the daily meetings, hear the daily word, and watch the effects of its teaching. A passing war party, in distress, was invited into one of the villages and supplied with food and other necessities. The captain declared his surprise. He was from a great distance, and had heard a very different story. "At the Delaware village they made wry faces at us," he said, "but here the men, women, and children all have made us welcome."

A visitor of another character dropped in at Shoenbrun in 1773, — the Rev. David Jones, himself a missionary, sent to the West by the Baptist Church in New Jersey. But his different experience with the Indians illustrated the superiority of the Moravian method. The journal of this eccentric worthy, who finally became an army chaplain under General Wayne, gives an interesting account of his two circuits of "missionating" in Ohio in the years 1772 and 1773. In the first he descended the Ohio as far as the Kanawha, in company with George Rogers Clark and other land prospectors. His second tour, in the winter

of 1772 and 1773, for the conversion of the Shawanees, led him down to the Scioto, which he mentions as opposite the boundary of the "new province" (Walpole).

The Shawanees had abandoned their town at the mouth of the Scioto, and transferred themselves to the plains on the line between the present counties of Ross and Pickaway. Their chief town was Chillicothe (Oldtown, or Frankfort), near the north fork of Paint Creek. Between this and the Scioto were Blue Jacket's town, and Pickaweeke, the latter named from the Picks formerly settled there, who were perhaps Miamis, as at Pickalinny, or Piqua.

Jones went up the Scioto to Blue Jacket's town on Deer Creek, and was introduced by the traders (several of whom he mentions as living at this and other towns on Deer Creek and the Scioto) to the Shawanees king. He spent the winter endeavoring to persuade the Shawanees, who it will be remembered were now becoming more and more refractory and hostile, that he was no trader, but had come to speak to his Indian brothers of heavenly things. But Mr. Jones had not the slightest knowledge of Indian language or character, and with the small pittance allowed by his society could not afford an interpreter. With no outfit but his theology, his mysterious silence and his singular dress excited a suspicion that he was a spy, and but for the friendly interference of the traders, his situation would have been very

unsafe. Departing from the Shawanees for Fort Pitt, he rode across the country by way of the Standing Stone and Salt Lick Creek (the Licking) to the Muskingum. Near the Licking he lodged a night at Ellet's. "This Shawanee," he noted, "is very rich in cattle, horses, and captive negroes."

He described the colony at Shoenbrun as already so well advanced, in February, 1773, that by frugality they had built neat log-houses to dwell in, and a good house for divine worship, with a floor and chimney and comfortable seats. Their meetings morning and evening, and their conduct in worship, he found praiseworthy. There was some indifference on Zeisberger's part, he thought, when he offered to preach to the Indians. But he was gratified the next morning, though he does not say what success he had.

Mr. Jones's visit led to an accession of some importance to the Moravians. At one of the Indian towns down the river, where they were holding a drunken feast and dance under favor of the traders, Mr. Jones unwisely intermeddled, and but for the protection of Killbuck, a Delaware captain, and grandson of the head chief Neta-watwes, would probably have lost his life. After the debauch was over, he had the courage to re-appear, and preached against the sin and ruin of whiskey, to such purpose that Killbuck destroyed the whole stock of the traders, and warned them that if they brought any more they should be

scalped. Killbuck, not long afterwards, followed this up by taking sides openly for the missions.

It is easy to perceive from Mr. Jones's mistakes how the Indians were drawn to the Moravians. Good-will once secured, their great aim was to convert the savage to their life of peace and love. To accomplish it, these wild sons of the forest were constantly urged to turn their thoughts away from blood and rapine to the love of Him who gave to the world all its humanity, and in whose bosom the red man and the white alike found rest. The daily hymns and worship which so much engaged the Indians, all the exhortations of the preachers, turned upon the one great point of impelling them to live and die like Him who died rather than resist the violence of his enemies. It sought a total reverse of their nature. But the passion and crucifixion, as wrought up in the intense and fervent pictures of the Moravian exhorters, seldom failed to rivet the attention of even the fiercest warrior; for it was that supreme heroism of the captive, in the last agony of torture, which was his grandest aspiration, and he was ready to adore it. While the unregenerate brave looked with scorn upon the Christian forgiveness and humility which could turn the other cheek when struck, yet before this ideal many of them yielded, and in silent homage with the "praying Indians," as they were called, forsook the war-path. Among these were a number of distinguished chiefs.

But in an outline the features of this little commonwealth cannot all be given. Considering the absolute favor which it enjoyed for years among the Ohio tribes, it can hardly be doubted that, if these missions on the Muskingum had been established either ten years sooner or ten years later, the Delawares, the Shawanees, the Wyandots, and not improbably the Miamis, would have adopted their belief.

As it happened, there was an ill-fated conjunction both in the time and the place of their establishment. At the beginning, as observed, there had not been entire harmony in the invitation to them by the Delaware chiefs. Even Netawatwes was not in favor of it, though his reception of them was generous. But the war party, of which Captain Pipe was leader, was opposed to them. He was of the Wolf clan, and distinguished in war, but more remarkable for his active and wily intrigues in the council. He was ambitious, but not the equal, either in prowess or ability, of his principal antagonist, Captain White-eyes, the head war-chief.

Things went smoothly for the Moravians, however, until the outbreak of the Senecas and Shawanees in 1774, caused by the infamous murders of Logan's family and other Indians by the border ruffians on the Ohio. The Shawanees town at Watamaki was destroyed by Colonel McDonald at the beginning of the Dunmore war, and the strain upon the Delaware to join these tribes

thus came very close, and Pipe was urgent. Glickhican, at the head of six Moravian Assistants, went up to the council at Tuscarawi to support White-eyes and the peace party. White-eyes barely carried the day, Netawatwes inclining for war. But though the hostiles were defeated at Kanawha, and humiliated by Dunmore's march to the Scioto, the evil disposition towards the Moravians, to whom White-eyes was secretly inclining, was so manifest that he suddenly withdrew himself from Netawatwes and the council. His power and leadership were so important, and Netawatwes was so much alarmed at the prospect of another defection like that of Glickhican, that he not only acknowledged the injustice he had done to White-eyes, but wholly changed his attitude to the Moravians. Glickhican and the Assistants, now insisted on behalf of the Delaware brethren that their teachers (the missionaries) be treated as members of the Delaware nation. Netawatwes at once proclaimed his change of sentiment to the council, and on White-eyes' demand it was decreed, in the name of the whole Delaware nation, that from thenceforth they would receive the word of God; that the Christian Indians and their teachers should enjoy perfect liberty, and the same rights in the Delaware country as other Indians, and all who wished to go to them and receive the gospel should be unmolested.

Upon this event old Netawatwes expressed

great joy, and until the day of his death was constant to the Moravians. He and his people soon afterwards abandoned Tuscarawi and established a new capital at Goschocking (Coshocton). The chiefs, in consequence of this change, desired to have a mission village nearer to that place. Lichtenau was therefore established by their authority, three miles below Goschocking, on the Muskingum. In April, 1776, Zeisberger and Heckewelder installed a colony from Shoenbrun in possession. Fields, building lots, and gardens were laid out, with a long street through them north and south, and the chapel in the middle.

For still greater security to the colony, the Wyandots were consulted, the lands on the Muskingum having been ceded by them to the Delawares thirty years before. The two nations now united in confirming to the Christian Indians all the lands on the Muskingum from Tuscarawi (Gepelemukpechunk), down to the bend below Newcomerstown, a distance of more than thirty miles. The population of the Moravian villages at the close of 1775 was four hundred and fourteen persons.

Events of much significance were the visits of distinguished Shawanees. One from the Hockhocking joined the congregation. A chief from one of the Scioto towns, accompanied by his wife, a captain, and several counselors, spent some days at Gnadenhütten. Much the most important, however, was Cornstalk, with a retinue of more

than a hundred persons, who was entertained for a week with due distinction. "I shall never forget your kindness," he said in departing, "and will acquaint all my friends that we have established this bond of friendship." But he was murdered two years afterwards by some Kanawha militia.

The calamity of the Moravians was the war of the American Revolution. It developed the dangerous fact that their villages, Lichtenau especially, were close upon the direct line between Pittsburgh and Detroit, the outposts of the two contending forces. Commissioners appointed by Congress had held a council of the Six Nations and western Indians, October, 1775, at Pittsburgh. The Moravians also were invited, but Zeisberger considerably declined. The western tribes other than the Delawares were manifestly unfriendly, and leaned to the side of the king. The division among the Delawares was known. The commissioners and the agent of Congress did not urge them to take sides, but rather to sit still and not take up the hatchet at all. This joyful report was taken back by their deputies, and it was therefore announced that the Delawares stood neutral.

But there had been hot words in the council at Pittsburgh. White-eyes would not conceal his favor toward the American cause. A speaker of the Six Nations in a haughty way reminded him that the Delawares, in their eyes, had no voice or authority in the matter. White-eyes, long since tired of this treatment, replied with great disdain

that he knew the Six Nations considered him and his people as conquered and as their inferiors, "but," he exclaimed, waving his hand in the direction of the Alleghany River, "all the country on the other side of that river is mine;" this being the Indian orator's phrase for impersonating his nation.

So bold and defiant a speech as this had not before been thrown at the Six Nations, and it was soon made the pretext for another division in the council of the Delawares; for Pipe, together with the Monsys, took the ground that this would undoubtedly draw down the resentment of the Six Nations upon them. By this he succeeded in drawing off from the Moravians a Monsy chief named Newalike, followed by a number of the same clan, who were made to believe their chief knew of some imminent peril about to fall upon the Delawares, and wished to save them. These apostates filled Shoenbrun with discord, and Zeisberger, fearing the disaffection would spread, proposed that the faithful part of the congregation at that place should abandon it. The greater portion withdrew in April to Lichtenau. The result was that Newalike and his adherents moved off to Sandusky. Pipe withdrew from the council; and his town some fifteen miles up the Wahlhonding became the centre of the malcontents. The peace party under Netawatwes, supported by White-eyes, Killbuck, Big Cat, and other chiefs, not only sustained the missions, but constantly consulted the missionaries in their affairs.

The worth of the Moravian missions, and their power over the Indians, is seen in the fact that for five years after the breaking out of the war they kept the Delawares in this position of neutrality, in spite of the incessant provocations of the war party, as well as the Wyandots and Shawanees, to make them join the British interest. The death of Netawatwes in 1776, and of White-eyes in 1778, were severe blows, the latter particularly. White-eyes was aiding General McIntosh in establishing Fort Laurens at this time. When reports were circulated in 1777 that the British governor at Detroit was dissatisfied with the Delawares, and attributed their refusal to unite in arms with his Indians to the influence of the missionaries, a deputation of the chiefs, accompanied by two of the Moravian Indians, carried a message to the governor. His reply was, that "they should consider the missionaries as an invaluable treasure, on account of the good they had done among the Indians, and should by no means part with them."

Another tribute to the missionaries soon afterwards was even more signal. A Wyandot embassy had been offering the war-belt again at Goschocking, and went home enraged with the answer, which was that "the Delawares had engaged to hold the chain of friendship with both hands, and therefore could spare no hand to take hold of a war-belt." In August, two hundred Wyandots, headed by Pomoacan, their half-king,

suddenly appeared at Goschocking. To gain time, Glickhican advised his people to give them a kind reception and feed them well. Under his management, the Wyandots to their great surprise were met, on their arrival, by a number of the Lichtenau people with loads of provisions, and entertained by one of Glickhican's choicest speeches; the conclusion of it being an earnest appeal to the half-king that he would "consider their teachers as his own body and love them as cousins."

Pomoacan declared that Glickhican's words had penetrated his heart, and that he would immediately consult his warriors. In a short time he announced their full acceptance of the proposal made to them. "Go on," he said, "and obey your teachers, and be not afraid that any harm shall be done to them. Attend to your worship and never mind other affairs. You see us, indeed, going to war, but you may remain easy and need not think about it." The next day the half-king, with his chief captain and eighty-two warriors, went down to Lichtenau, and after meeting and shaking hands at the schoolhouse with Zeisberger and Edwards, they were entertained at another bounteous meal, spread under an arbor of green boughs. Every Indian was loaded with as much as he could carry to Lichtenau. Pomoacan sent back messengers to the Wyandot chiefs at Sandusky, and to the governor at Detroit, with an account of the covenant he had made, and an

assurance that he and his warriors had acknowledged the white brethren to be their fathers. The Moravians were distrustful of Pomoacan, for they knew his intriguing ways, but he kept faith with them awhile by taking care that none of his war parties should disturb them.

In the next year a similar encounter was warded off, with a more singular result. The principal war chief of the Canada Wyandots (Hurons) had been sent by the commandant at Detroit, with ninety chosen warriors, to make a border raid on the Ohio. He halted near Lichtenau, and sent in a message to Glickhican, his comrade in the late French war. The latter went out to meet his old friend, and brought him and his captains, at their own request, into town, to visit the missionaries. The speech-making became very impressive ; the more so as the Huron, after complimenting his Christian cousins and their teachers, observed that he as well as they had teachers and a house for prayers, and also the large book (Bible). "But," said Glickhican, in replying to this part of the speech, "I doubt whether yours be the same book from which our teachers instruct us. In the book which they have, God commands in one place, 'Thou shalt not kill;' in another place, 'Love your enemies;' nay, it says, 'Pray for them.' Can it be supposed, then, that He that created man should not be offended when they destroy each other? When we were accomplices, brother, each of us strove to

outdo the other in murdering human beings ; but we knew no better. You and I were friends when we were young, and have remained such to this day, when we both are old. Let us do alike and put away from us what is bad, and forbidden by God, the killing of God's creatures."

When Glickhican finished, the war chief retired to his camp. In an hour he returned with a single attendant only, and requested an interview with the National Assistants, of whom Glickhican was the head. "I have considered your words," he said, "and will now open my heart to you." He stated his office, his orders, and his present duty to the governor. "I will tell you how I will act. I will go within a day's march of the Ohio. I will capture a prisoner, who shall be taken to my father (the governor), with the charge that he be not hurt. With that I will return him his hatchet, which he forced upon me. Not a life shall be lost by my party, and in ten days you shall see me here again, if the Great Spirit spares my life."

Taking his farewell, in ten days he returned with a prisoner, as he had said, and stopping only for a meal passed on. He appointed a time with Glickhican when he would return to see him, but he would not approach that place again, he said, with arms in his hand.

The same year which deprived the Moravian missions of the powerful support of White-eyes had brought upon them a dire calamity in the

arrival at Goschocking of McKee, Elliott, and Simon Girty, who had been under arrest at Pittsburgh as spies and secret agents of the Tory cause. They had escaped, and were now entering upon that savage career which made their names infamous in Western history. McKee was the chief, and the band took Captain Pipe into their councils. The Moravians, it may be inferred, became objects of their malignity. These men were acquainted with all the Indian tribes, and were soon spreading false reports among them, which were calculated to alarm even the friendly Delawares, as to the intentions and plans of the Americans. Their object was to arouse the Indian nations, and lead them to unite at once in driving the Americans across the Ohio River, if they would preserve themselves from being murdered or made slaves. White-eyes' last triumph had been in suppressing one of these lies, which had nearly turned the whole Delaware nation against him on the ground that he was a friend of the Americans. Now that he was "put out of the way," which was solemnly ascribed to the "will of the Great Spirit, that the nation might be saved," these incendiaries soon contrived to have things their own way.

McKee, who had been deputy Indian agent at Pittsburgh before the war, now became agent and manager of this department under the governor at Detroit, and rumors were thick that the governor was determined to punish all Indians, Moravians not excepted, who would not turn out and

fight the American rebels. The governor (Hamilton) was captured in February, 1779, by Colonel Clark, in his fort at Vincennes, but the excitement and hostility against the missions increased. Heckewelder intimates that much of the inhumanity charged upon Hamilton, for which he was kept imprisoned in Virginia, was the work of McKee and his understrappers, and was unknown to the governor. Smarting under the severe measures which the commander at Pittsburgh had adopted in his treatment of them, the hostility of these men to the United States became unbounded. They resorted to every possible device to excite a general war upon the frontier, and the missionaries were the special objects of their hatred, not only because they were holding back the Delaware nation, but because McKee suspected them of sending information to the American government and officers of the doings in the Indian country. Through their instigation two attempts were made to assassinate Zeisberger, Girty himself leading one of the parties for this purpose. Both were defeated by the vigilance of the mission Indians.

These plots and Pipe's increasing influence over the Delaware council created such a division at Goschocking, that Lichtenau was considered by the missionaries and assistants as no longer safe from the marauding parties continually passing that way. In March, 1780, it was abandoned, the chapel being pulled down that it might not

be applied to heathenish purposes. The congregation set out, by land and water, to the new village of Salem, now built twenty miles up the river and within six miles of Gnadenhütten. Here, with the same energy which they had displayed in their previous colonizing, they built a new chapel of hewn timber, hung a bell, and consecrated the edifice by the 22d of May, and the people were settled in their new houses before winter.

Very soon after this removal, Captain Pipe made Goschocking so uncomfortable that Killbuck and his colleagues of the peace party were compelled to abdicate and seek safety for themselves at Pittsburgh. Pipe, at the same time, fearing that he might be attacked by the Americans, went off with his adherents of the Wolf tribe to the Wyandots at Upper Sandusky. Thus the banks of the Muskingum, so quiet and happy for years under the gracious influence of the Moravians, were again given over to the fortunes of war. The three villages, now in close proximity with each other, and removed from the great war-path twenty miles below them, moved on in their accustomed life of daily worship and labors, as though unconscious, in their faith and trust, that evil was near.

But the hideous truth now dawned upon them, that, secure as they felt themselves among the savages, their real enemies were the whites, and that the worst of these were those to whom they

were most friendly — the Americans. It seems inexplicable, but the populace who now infested the Upper Ohio had taken it into their heads that the Moravian Indians were secretly their foes, and aiding if not perpetrating the murders and ravages on the frontier ; all this merely because they fed the passing war parties, as has been related. Their towns were stigmatized as the “half-way houses” of the British on the road to Detroit. The least degree of intelligence or generosity should have comprehended the situation.

The first display of this frenzy was in August, 1780. Colonel Broadhead, the commander at Pittsburgh, marched over to the Muskingum with eight hundred troops, regular and militia, to suppress the hostile rising at Goschocking. He halted two miles below Salem, and sent in a request for provisions, which were immediately supplied both there and at Gnadenhütten. Heckewelder went out to the camp, and was assured by Colonel Broadhead that no fault could be found with the missionaries by the Americans or by the British, acting, as they were, upon principles of humanity and zeal for the good of the people among whom they had been received. In the midst of this interview an officer entered to report that a part of the militia were breaking out for the purpose of destroying the Moravian villages. The murderous design was checked with some difficulty ; Colonel Shepherd, of Wheeling, in command of another detachment of militia, being particularly efficient in suppressing it.

In strong contrast with the turbulence of these white savages was the behavior of the Delaware war chief Pachgantschihilas, who with eighty warriors soon afterwards went to Gnadenhütten to arrest Killbuck. Having searched the town, and being assured that the chief had gone to Pittsburgh, he summoned the National Assistants of the three towns to meet him. He warned them of the dangerous position they occupied, as just shown by Colonel Broadhead's expedition; and while he did not reproach them for their love of peace rather than war, he urged them to go with him to a secure place (the Scioto or the Miami), where they might worship in peace, and have their farms and cattle and game just as abundantly as here. In conclusion he said: "Think on what I have now told you, and believe that if you stay where you now are, one day or other the Long Knives (Virginians) will in their usual way speak fair words to you, but at the same time murder you." The words were prophetic, and but for the unfortunate disbelief of the assistants in the possibility of such an event, a temporary removal, under the protection which the war chief intended, might have saved the mission and their villages.

Notwithstanding disturbances in the outer world, this simple and confiding people enjoyed perfect peace and quiet until August in the following year, hardly seeing or hearing of the hostile Indians. They not only had implicit faith in the

forbearance of the surrounding tribes, and equal incredulity that the whites would injure them, but in their way had counseled with their divine Head and Master, and assured themselves that it was His will they should abide where they were.

Unknown to them, they were between two sets of white men equally bent upon their destruction : one consisted of McKee and his confederates, who were striving for the mastery of the Ohio Indians, in order to hurl them in a mass upon the weak frontier, which Congress had left unprotected ; the other, of the low, uncivilized frontiersmen, more cruel and bloody than the Indians, who hated the introduction of Christianity, or any other means of reclaiming the red man. The onset of the two happened almost as though it had been planned in concert.

How the British commander at Detroit, in 1781, was induced to reverse the just and generous favor shown to the Moravians by his predecessor in 1777, is not yet explained. Ohio at this time was under the government of Quebec, and this, like other matters going on in Ohio from 1774 until 1795, cannot be cleared up until the reports and correspondence during that period between the governor at Detroit and his chief at Quebec are more fully published. It was the opinion of Zeisberger and Heckewelder, after the frequent conferences which they had with the governor at Detroit, that McKee was the prime cause of the trouble, and that he, by procuring false reports

from Elliott, Pipe, Pomoacan, and various agents, persuaded the governor that the missionaries were partisans of the American cause, and engaged in a correspondence with its officers prejudicial to the British interest. It must be admitted that in some degree this was true, as since discovered from Zeisberger's diary.

It was this that determined Major De Peyster, the commandant at Detroit (and governor by courtesy), to rid himself of neighbors so troublesome and dangerous. The British agent of Indian affairs (Heckewelder says McKee) called upon the council of the Six Nations to remove them. They undertook the commission, in their usual wary manner, by sending a message to the Ottawas and Chippewas and calling on them to attend to it. They refused, declaring that the Christian Indians had done them no injury.

The message was then sent to the Wyandots. Pomoacan half consented; pretending that he would do so only to save the Christian Delawares from destruction. McKee now appeared with Elliott, Pipe, and Girty, and, as a further inducement, offered him a reinforcement of Delawares, Shawanees, and Ottawas, enough to double his force, and promised him the command. On these conditions, and that Elliott and Pipe should go with him, Pomoacan consented. McKee now retired to his place on the Scioto (near Oldtown) to await the consummation of his plan.

The expedition was kept secret, so that none

but the captains knew its destination ; and the Moravians were surprised when Pomoacan, with Pipe and a hundred and forty warriors, suddenly appeared at Salem on the 10th of August, 1781, accompanied by Elliott. His tent, with the British flag hoisted above it, formed the centre of their camp. Glickhican went out to learn what this was for, and returned with Pomoacan and Elliott to the house of Heckewelder, the resident missionary. After the usual salutations, the Wyandot chief announced that a matter of importance required the attendance of the chief men of all the villages. A meeting at Gnadenhütten was appointed for the next day, and Pomoacan and his followers at once proceeded to that place. In the course of the next four days three hundred warriors had assembled.

For three weeks a controversy was waged whether the missions should be removed ; the Christian Indians expostulating against the cruelty and starvation to which they would be exposed, but offering to go if allowed until the spring to prepare for removal. Pomoacan and even Pipe and their warriors thought this reasonable and were satisfied, but Elliott was so much displeased that he made himself offensive. The warriors, in retaliation, began to shoot at the British flag, and Elliott had to haul it down. After ten days of wrangling, the Indians standing out for mercy to the Moravians, though some were for murdering them, Elliott carried his point by a threat that

unless they complied with his demand he should leave them, and the governor would abandon them to the Americans as enemies.

This drove the Indians to extremities. Suddenly, on the 3d of September, the missionaries were seized and robbed, their families turned out of doors, their houses pillaged, their books and papers burned or scattered to the winds. Although it had not been intended to disturb the Christian Indians, the excited warriors soon forgot all distinction. There was no bloodshed, but the three villages were a scene of general robbery and violence. The missionaries and their families were to be banished, but all their people, except such as had already fled, chose to follow them. Glickhican in some way gave offense, and sixteen Delawares were sent down to Salem to seize him. They surrounded his house, but hesitated about entering. Observing their timidity, he stepped out and thus accosted them: "Friends! I conclude you are come for me. If so, obey your orders. I am ready to submit. You appear to dread Glickhican as formerly known to you. Yes, there was a time when I would have scorned to be assailed in the manner you now meditate; but I am no more Glickhican." With trembling hands they tied him and took him to Pomoacan, but upon explanation he was discharged.¹

¹ This gleam of the warrior was unusual for Glickhican. On the war-path his name had been terrible. But, in his degree, there is no finer example of the "fierceness of man refrained."

On September 11th, the people of the three villages assembled at Salem, with such horses, cattle, and effects as Elliott had left them. A last and most impressive service was held in the chapel, and the sacraments of baptism and the eucharist were administered. The whole caravan then moved off, some by water and some by land, up the Walhonding, to Gokhosing (Owlstown), at the confluence of Owl and Mohican creeks. From here to their destination (Upper Sandusky) all journeyed by land.

In November, Pipe was ordered by the governor to bring the missionaries before him at Detroit for investigation. The scene as described by Zeisberger and Heckewelder was highly interesting. The commandant, Major Arendt Schuyler De Peyster, of the 8th British Infantry, a native of New York, held a formal council, where, seated amid his officers and the Indians, the missionaries and assistants grouped on one side, Pipe and his friends on the other, he ordered in an emphatic manner that Pipe should now repeat, in the presence of the Moravians, the charges which he had at various times brought against them. The chieftain was abashed, and turning to his accomplices, bade them speak. They were equally at fault. Pipe thereupon, with the versatility in

This humble convert took the name of Isaac ; and in the massacre, March 7, 1782, he yielded as a child, when the raising of his war-whoop to the forty-six men who perished with him might have scattered their murderers in dismay.

which he excelled, began to extol the missionaries, and implored the governor "to say good words for them, as they were friends of the Delawares, and he should be sorry if they were treated hard."

The governor exposed his treachery by requiring Pipe to repeat the accusations which he had been sending him. He acknowledged his wrong, and being asked by the governor what was now to be done with the missionaries, he advised that they be sent back to their homes. They were sent back to Sandusky, clothed and supplied by Major De Peyster, but no amends was made for their wrongs. Thus far the English.

The intense sufferings of the poor people from exposure and starvation during the winter induced a hundred or more under Glickhican and five other assistants to return in February, 1782, to their villages to save the corn left standing in their fields. On the 7th of March they had just finished and were about to return, when a merciless crew of ninety men from the Ohio, one of whom named David Williamson passed for colonel, came upon them, and having, under pretense of escorting them to Pittsburgh, secured their guns, hatchets, and even pocket-knives, shut them up in two houses, where they slaughtered all of them like sheep, men and women, ninety-six in number! This colonel left it to a vote whether he should keep his word, or murder the deluded prisoners, and only eighteen of the ninety were honest

enough to oppose this basest of massacres. Yet good Dr. Doddridge has apologized for Williamson as "loaded with unmerited reproach, because he was only a militia officer, who could advise but not command."

The Nemesis, in the following year, was the more shocking, inasmuch as this man escaped, and the victim who suffered for his atrocious crime was a man of worth. Another expedition, of larger numbers, set out from the Ohio River in May, 1782, to destroy what was left of the Moravian Indians at Sandusky, and also to lay waste the Wyandot towns. Colonel William Crawford, unhappily for him, and it is said against his will, was elected over Williamson by this rabble to be their commander, the latter being chosen as second. They marched to the Sandusky Plains, watched by the Indians at every camp, but Moravians and Wyandots alike had disappeared. In much confusion, arising from the insubordination of his men, Colonel Crawford wheeled about to return, and at once was assailed on every side by swarms of Indians lurking in the high grass. His force became divided, and a large party under Williamson made their escape. Colonel Crawford was captured, and fell into the hands of Pipe. This chief, by reason perhaps of De Peyster's rebuke, but still more from rage at the wanton massacre of the Christian Delawares, for which it seems he died repentant, was inexorable to every appeal for mercy to Crawford, in which even

Girty, according to one account, joined, much to his peril, and caused him, after horrible torture, to be burned at the stake.

So perished the Moravian missions on the Muskingum. Not that the pious founders ceased their labors, or that these consecrated scenes knew them no more. But their Indian communities, the germ of their work, the sign of what was to be accomplished by them in the great Indian problem, were scattered and gone. Zeisberger, at their head, labored with the remnants of their congregation for years in Canada. They then transferred themselves temporarily to settlements on the Sandusky, the Huron, and the Cuyahoga rivers. At last he and Heckewelder, with the survivors of these wanderings, went back to their lands on the Tuscarawas, now surrounded by the whites, but fully secured to them by the generosity of Congress.

It is understood, though Heckewelder in his modest narrative does not mention it, that in 1798 he visited Gnadenhütten, and gathered up the relics of the ninety-six victims burned in the houses in which they were murdered. All were buried in the cellar of one of these houses, and a mound raised over the spot.

Goshen was established by Zeisberger near the old site of Shoenbrun, and here he had the happiness in 1803 to receive his bishop, Loskiel, the author of the best history in English of the Moravians. Here also, in 1808, full of years and of

labors for his Master bravely and faithfully done, he died in the eighty-eighth year of his age. Heckewelder in 1801 reëstablished the church at Gnadenhütten also, and there made his residence until 1809; being postmaster, justice of the peace, and one of the associate judges of the Court of Common Pleas, as well as pastor.

The work thus struck down was wisely and well framed. If not successful, it was at any rate unexcelled as an attempt to bring the Indian and white races on this continent into just coördination. So far has failure outweighed success in this harmonizing of the two races, that future ages, it is to be feared, will deem the failure a blot upon the civilization and intelligence of this period.

That these missions, though not enduring, as sometimes imputed, were none the less the primordial establishment of Ohio, is as true as that Plymouth was the beginning of Massachusetts. Neither lasted long, but that was no fault of the Moravians. Plymouth, though equally obsolete, is proudly commemorated by the sons of Massachusetts. The Moravians may justly be remembered and honored as THE PILGRIMS OF OHIO.

CHAPTER VII.

THE NORTHWESTERN TERRITORY.

BEFORE the Declaration of Independence, the Continental Congress had called upon the colonies to establish governments each for itself. A Constitution was adopted by the Virginia convention, in which a formal cession was made to Maryland, North Carolina, and Pennsylvania of the territories which had been set apart to them by the king nearly a hundred and fifty years before, upon the forfeiture of the Virginia charter, and concluding with a manifesto which at once challenged attention: —

“The western and northern extent of Virginia shall in all other respects stand as fixed by the charter of 1609, and by the public treaty of peace between the courts of Britain and France in the year 1763, unless by act of this legislature one or more governments be established westward of the Allegheny Mountains; and no purchase of lands shall be made of the Indian nations but on behalf of the public by authority of the General Assembly.”

This was a remarkable declaration, considering that Virginia was not referred to in the treaty of 1763, and its extent by the charter of 1609 was

fixed only as "that space or circuit of land lying from the seacoast of the precinct aforesaid up into the land throughout from sea to sea, west and northwest," bounds which to this day have never been defined, or even intelligible, so that the extent of the domain was entirely unknown except so far as the province actually occupied and held the country.

Nor was it happily framed as a manifesto, if such was its purpose. The same prerogative by which it conceded Maryland, North Carolina, and Pennsylvania to have been detached, had, by the proclamation of 1763, restricted all the colonies, Virginia inclusive, within the limits of the Alleghany ridge. Cromwell's recognition of the Virginia charter in 1651 is sometimes cited in aid, but was futile. No act of the Commonwealth had any validity in English law. Even the years of its existence are counted as part of the reign of Charles II.

The treaty of Fort Stanwix, which by the very terms of the order in council was to settle the boundary line between the several provinces, as well as the Indian tribes, had extended the limit westward to the Tennessee River, but bounded it northward by the south bank of the Ohio River. This had been followed by an act of Parliament, supreme in English law, by which the region thus doubly reserved to the crown and divided from Virginia was annexed to the Province of Quebec, and at the time of this manifesto was

under its government and control. This was recognized by the act of Congress, March 26, 1804, directing that all legal grants in the Northwest by the French authorities prior to the Treaty of Paris in 1763, and by the British authorities prior to the treaty of peace in 1783, should be recorded in the land-offices. This was the status of the Northwest Territory when the war of the Revolution broke out; and so it remained until 1783, except so far as it was affected by the capture of the British posts at Kaskaskias and Vincennes.

But the position assumed by Virginia put a stop to the Articles of Confederation. In the first draft it was proposed that Congress, among other powers, should limit the bounds of colonies which, by charter, proclamation, or other pretense, were said to extend to the South Sea, and assign territories for new colonies. When the bill emerged from the committee of the whole, this provision had disappeared. The articles were referred to the States, and in July, 1778, were found to have been ratified by all except New Jersey, Delaware, and Maryland. As a unanimous assent was necessary, the confederation was defeated.

The Maryland delegates then proposed to amend by restoring the provision as to western lands. The proposition was defeated by the votes of the States of New Hampshire, Massachusetts, Connecticut, Virginia, South Carolina, and

Georgia, against those of Rhode Island, New Jersey, Pennsylvania, Delaware, and Maryland; the delegates of New York being equally divided, and those of North Carolina absent.

New Jersey and Delaware subsequently gave their concurrence. Maryland resolved, single-handed, to maintain her position, unless an article were added by which the country ceded by France to Great Britain should, if wrested from the latter by the common war, become the common property of the Thirteen States. The Maryland legislature issued a declaration of their motive and principles, and instructed their delegates in Congress to abide by them.

The unseemly and inopportune strife was brought to a crisis by a Virginia statute, passed in the summer of 1779, opening a land office for the entry of lands west of the Alleghany Mountains. Although it prohibited land entries beyond the Ohio, it operated as the signal for new inroads by the squatters and land jobbers. This brought remonstrances to Congress from persons styling themselves the Vandania, the Indiana, and the Illinois and Wabash companies, setting up rights under the Walpole grant and the concessions at Fort Stanwix, which the king had rejected. The delegates from Virginia demurred to the consideration of these claims, as pertaining exclusively to her sovereignty, and beyond the jurisdiction of Congress.

The other states now plucked up spirit, and

the right to the western lands was agitated for three years. Congress insisted upon its jurisdiction, and declared that appropriations of the vacant lands by the several states during the war would be attended with mischief. Moreover, upon the receipt of a report from Colonel Broadhead, commandant at Pittsburgh, in November, 1779, that he was expelling trespassers from the west side of the Ohio and destroying their cabins, Congress ordered it to be transmitted to the governor of Virginia, with the request that any further intrusion be prevented. This drew a remonstrance from Virginia. Her position was that the United States could have no territory otherwise than in the right of one of the states; the result of which, logically, would have been that no cession could be obtained by treaty as the result of the war, and fatal, therefore, to her own claim. }

The gloom cast upon the Revolutionary cause by this unsettled state of the Union, and an adverse turn of the war, was broken in February, 1780, by the patriotic example of New York, which it will be remembered had not voted upon the Maryland proposition. Her delegates were now authorized to surrender to the United States, for the common good, all her right and title, both of soil and jurisdiction, westward of such a line or boundary as these delegates should deem expedient.

This was the title claimed through the Six Nations, or Iroquois, and asserted as extending

to the Mississippi River. Upon the report of a committee to which this offer, together with the Maryland declaration and the Virginia remonstrance, was referred, Congress resolved to abstain from any discussion of the various titles and claims now brought into opposition, but to urge upon the other states to follow the example of New York and make liberal concessions, instead of persisting in attempts which endangered the stability of a general union. Congress at the same time made emphatic the assurance, ever since regarded as the basis of the public land system, that all territory surrendered by the states should be disposed of as a common fund, and formed into new states upon equal footing in the Federal Union with the original states; also that the expense incurred by any state in subduing British posts, or acquiring and defending territory so surrendered, should be reimbursed by the United States.

Propositions soon followed from Connecticut and Virginia, but upon such conditions as could not be entertained. One which Virginia required was singularly inconsistent with her high pretensions. It was that, in consideration of yielding her western claims, the United States should guarantee her territory on "the southeast side of the Ohio River." Another was, that all royal grants, and all purchases from the Indians, in the ceded territory, inconsistent with the chartered rights of Virginia, should be held void. The

absurdity of the claim of Connecticut, under her charter from Charles II. in 1662, was twice adjudicated ;— in the first instance, by a royal commission, in 1664, between that colony and the Duke of York ; and again in December, 1782, by a commission of Congress between Connecticut and Pennsylvania. Her people, in the midst of the war, were intruding upon the Wyoming valley under pretense of this charter.

Maryland gracefully yielded to the appeal of Congress by signing the Articles of Confederation, March 1, 1781. On the same day, probably by concert, the delegates of New York executed a cession by that state of all her rights and territory west of the line which now forms her western boundary. This deed, together with the cessions offered by Virginia and Connecticut, and the petitions of the land companies, were referred by Congress to a committee.

The report of this committee, November 3, 1781, just after the surrender of Cornwallis, was somewhat startling. They were unanimous that the cession by New York should be accepted in behalf of the United States, because thereby the jurisdiction of the whole western country belonging to the Six Nations and their tributaries, and appendant to the government of New York, would be vested in the United States, greatly to the advantage of the Union. They also reported that for the same reason, and others which were fully set forth, Congress could not, consistently

with the interests of the United States, or the right vested in them as the sovereign power, accept the cession of Virginia. They rejected the Connecticut cession, and the claims of the Vandalia (Walpole) and the Illinois and Wabash companies, but favored the allowance of the Fort Stanwix grant to Croghan which was presented by the Indiana company.

The issue thus suddenly precipitated upon Virginia was unexpected, and as New York in her cession had reserved the right of having her title adjudicated by a commission like that which settled the dispute between Connecticut and Pennsylvania, there was the prospect for awhile of an ominous contest. Mr. Madison was the leading member of the Virginia delegation in Congress, and anxiously regarded the action of this committee as indicative of deep machinations, and perhaps a secret hostility to the Virginia cession in Congress. He wrote to the governor (Jefferson), and other Virginians best informed, entreating them to trace the title, and furnish him with every argument and document that could vindicate it. The adversaries, he warned them, would be either the United States or New York, or both. The correspondence by no means evinces a profound knowledge or faith as to the grounds on which the Virginia title had been so much pressed.

But this report never came to a vote. Congress, after the first impulse subsided, adhered in

good faith to its first resolution not to discuss or touch the rival claims of the different states, and, resting upon its own reserved rights, sought to bury all contentions by covering the Western territory with the titles of as many of the claimants as possible, be they what they might. This enabled Mr. Madison, when the question was brought up in May, 1782, to obtain a postponement until the Virginia assembly should meet and consider the situation. He was materially aided by the influence of New York; General Hamilton, the leading delegate of that state, entertaining the opinion that the title was inherent in the United States, and therefore neutral as between Virginia and New York.

In September Congress was anxiously casting about for means to replenish the treasury. Upon a suggestion of Dr. Witherspoon that the western lands would accomplish it, the subject was again approached in a side way, and another committee appointed. A separate vote accepting the New York cession was also obtained in October. The Virginia cession of January, 1781, was referred to the committee thus ostensibly appointed for revenue purpose. Mr. Madison was a member of it. To his patient and temperate counsels and mediation, probably, it was due that the thorny terms and conditions demanded by Virginia were toned down to a compromise which was proposed by Congress September 13, 1783, and accepted by Virginia in December in the terms stipulated by

Congress, "although," it was added, "they do not come fully up to the propositions of this Commonwealth." On the 1st of March, 1784, the deed of cession was executed.

The stipulations were those originally offered and assured by Congress, that the territory should be for the common benefit, and formed into states not less than one hundred nor more than one hundred and fifty miles square, to be admitted into the Union upon an equality with the original states; that Virginia should be reimbursed for the expense of subduing the British posts, besides granting a donation of one hundred and fifty thousand acres at the falls of the Ohio to Colonel George Rogers Clark and his officers and soldiers; and furthermore, that, in case there should not be a sufficient quantity of good lands south of the Ohio River to provide for the bounties due to the Continental troops of the Virginia line, the deficiency should be made up by good lands to be laid off between the Scioto and Little Miami rivers. The conditions that Virginia should be guaranteed in her territory southeast of the Ohio, and that all royal grants or Indian sales to private persons should be deemed void as inconsistent with the chartered rights of Virginia, were disallowed, inasmuch as they would involve a discussion of the right of Virginia to the territory, which Congress intended studiously to avoid. The inference that Congress admitted any title of Virginia or the other colonies, by urging and accepting these ces-

sions, is therefore a misapprehension. The question, by common consent, was to be buried. Had it come to an issue, Congress or a commission would probably have decided that the United States succeeded of right to the crown domain. Such was the opinion of leading men, and it was exactly expressed in the instructions to Mr. Jay, in 1782, not to relinquish the Mississippi. "It is sufficient that by the treaty of 1763 all the territory now claimed by the United States was expressly and irrevocably ceded to the king of Great Britain, and that the United States are, in consequence of the revolution in their government, entitled to the benefit of that cession." Mr. Madison was chairman of this committee.

Massachusetts surrendered her claims in April, 1785, and Connecticut, in September, 1786, yielded all claim south of the 41st degree of latitude, and west of a line one hundred and twenty miles from the west line of Pennsylvania. The two districts thus conceded by the United States to the Virginia soldiers and to Connecticut fell within the bounds subsequently allotted to Ohio, and are known as the Virginia Military District and the Western Reserve. They were settled chiefly by people of those two states respectively. The districts purchased by the Ohio Company and by Symmes were peopled, the one from Massachusetts, the other from New Jersey. Thus it happened that in different quarters of Ohio a marked distinction in manners and customs, and to some de-

gree in the ideas, of the people grew up with the State, which at this day has not been effaced.

As to all lands north of the Ohio River, the title of the United States by the treaty of 1783 was therefore made conclusive. There is still an open question, between the states on its opposite banks, as to their respective jurisdiction over its waters. Thus far it has been determined only that Virginia and Kentucky do not extend further than low-water mark on the northern shore. Whether they extend to that line is as yet unsettled.

But Virginia, by her reduction of the British posts at Kaskaskias and Vincennes, had a special and meritorious ground for the concessions made to her by Congress. The fallacy has been in assuming that this gave her any title to the country. In its very nature as a conquest made in a war in which Great Britain and the United States were the belligerents, and in which Colonel Clark's invasion was justifiable only on the ground that Virginia and her troops were waging war in behalf of the United States, there can be no escape from the consequence that the success inured to the principal power and not to a mere segment. Another fallacy is in assuming that the conquest extended farther east than the Wabash. The territory of Ohio was never a dependency of Vincennes, but always under the command of Detroit. It remained, as a matter of fact, under hostile occupancy of the British and Indians long after the treaty of 1783. No one understood this

so well as Colonel Clark himself, who, after his victory on the Wabash, at once made strenuous efforts to raise an expedition against Detroit. The effort failed through General Washington's inability to spare either troops or supplies for the campaign. How dangerous was this British occupancy of Detroit became fearfully apparent in the successive defeats of La Balm, Lochrey, McIntosh, and Crawford, during the Revolutionary War, and of Harmar and St. Clair subsequently. These events very clearly show that Virginia made no conquest east of the Wabash.

There is a theory that in the treaty of 1783 the United States acquired the boundary of the Mississippi and the upper lakes by virtue of Clarke's conquest and the rule of *uti possidetis*, as it is called in international law; that is to say, each party retaining what it has in possession. But this does not appear by any account of the negotiations. It does appear, on the contrary, from the instructions of Congress to their commissioners in Europe, that as early as December, 1776, the free navigation of the Mississippi River was claimed; and that one among the points adopted in March, 1779, as essential to the safety and independence of the United States, was that in any treaty of peace, the same boundary must be insisted upon as that ceded to Great Britain by France. The difficulty as to the western lands was more with Spain and France than with England. The fisheries interested England more than the West.

Obviously, the boundary established was not upon the principle of *uti possidetis*. The application of that rule would have left Ohio, Michigan, the larger part of Indiana and Illinois, and all of Wisconsin and eastern Minnesota, under British dominion.

Without waiting for the cessions by Massachusetts and Connecticut, Congress passed an ordinance, May 20, 1785, for surveying and disposing of the public lands west of the Ohio River. The first geographer, or surveyor-general, was Thomas Hutchins, who as captain in the 60th British Infantry had served many years in the West as an officer of engineers, in which capacity he had shown high scientific qualifications. The system of rectangular surveys by sections, townships, and ranges was adopted by that ordinance, and by its requirement the initial point was established by Hutchins and Rittenhouse, the official geographer of Pennsylvania, at the point where the north bank of the Ohio River is intersected by the west line of Pennsylvania. This line is a meridian at the west extremity of the celebrated line of Mason and Dixon. On a base line extending due west from this point, the "Seven Ranges" were laid off which were the beginning of the land system of Ohio.

To open the way for surveys and sales of the western lands and induce emigration, it was essential to obtain the Indian title. A board of commissioners had been established for this pur-

pose in 1784. Instead of seeking peace and friendship through the great Council of the Northwestern Confederacy, which had now transferred its annual meetings from the Scioto to the Rapids of the Maumee (near Toledo), these officials adopted a policy of dealing with the tribes separately. Year after year they treated with sundry gatherings of unauthorized and irresponsible savages, at what are known as the treaties of Fort Stanwix in October, 1784, Fort McIntosh (mouth of Big Beaver) in January, 1785, Fort Finney (near the mouth of the Big Miami) in January, 1786, and Fort Harmar (mouth of Muskingum) in January, 1789. By these proceedings it was given out and popularly supposed that the Indian tribes on the Ohio had acknowledged the sovereignty of the United States, and surrendered all the territory south and east of a line which passed up the Cuyahoga River and across the portage to the Tuscarawas, then descending this stream to Fort Laurens (near the line between the counties of Stark and Tuscarawas), thence running west to the portage between the heads of the Big Miami and the Auglaize rivers, and down the Auglaize and Maumee rivers to Lake Erie. Congress was under the delusion that it had acquired the Indian title and full dominion of all the lands between this line and the Ohio River.

The mischief of these travesties was soon discovered in new raids and murders perpetrated upon the settlers of the government lands by the

very tribes ignorantly reported and supposed to have ceded the territory. The error was so clearly pointed out, in a memorable speech or remonstrance which was sent to Congress by the Council of the Confederates in December, 1786, that a passage from it is worth quoting. After deploring their disappointment that they had not been included in the peace made with Great Britain, they advised Congress that—

“In their opinion the first step should be that all treaties on their part, carried on with the United States, should be with the general voice of the whole confederacy, and in the most open manner, without any restraint on either side; and as land matters are often the subject of our councils with you, and a matter of the greatest importance and of general concern to us, in this case we hold it indispensably necessary that any cession of our lands should be made in the most public manner, and by the united voice of the confederacy; holding all partial treaties as void and of no effect.

“We think the mischief and confusion which has followed is owing to you, having managed everything respecting us in your own way. You kindled your council fires where you thought proper, without consulting us, at which you held separate treaties, and have entirely neglected our plan of having a general conference with the different nations of the confederacy. Had this happened, we have reason to believe everything would have been settled between us in a most friendly manner. We wish, therefore, you would take it into serious consideration and let us speak to you in the manner we proposed. Let us have a treaty with

you early in the spring. We say let us meet half way, and let us pursue such steps as become upright and honest men. We beg that you will prevent your surveyors and other people from coming on our side of the Ohio River.

"It shall not be our fault if the plan we have suggested should not be carried into execution. In that case the event will be very precarious, and if fresh ruptures arise we shall most assuredly, with our united force, be obliged to defend the rights and privileges which have been transmitted to us by our ancestors.

"These are our thoughts and firm resolve, and we earnestly desire that you will transmit to us, as soon as possible, your answer, be it what it may."

To this wise counsel Congress made an evasive answer. Afterwards it was resolved that a general treaty convention be held, and St. Clair, as governor of the territory, was instructed to take measures for holding it. But this was countermanded the next week, and the consequences are well known. What influence brought about this reversal of the order for a general treaty may be surmised from the letter of St. Clair to the President, in May, 1789, transmitting his treaty at Fort Harmar:—

"The reason," he said, "why the treaty was made separately was a jealousy between them, which I was not willing to lessen by appearing to consider them as one people. I am persuaded their general confederacy is entirely broken."

How grossly he erred in judgment is told in

the disasters which followed in the campaigns of General Harmar and himself. The confederates were never so powerful as in the summer of 1793, when they refused to treat with General Washington's commissioners as to any boundary but the Ohio, and sent them home.

Upon this dangerous footing Congress proceeded to establish a "temporary government" of the Western territories. A declaratory resolution had been introduced in October, 1783, but the first definite action was by the adoption of Mr. Jefferson's plan, April 23, 1784. His project was to divide all the western country north and south of the Ohio into new states by lines of latitude two degrees apart, intersected by two meridians of longitude to be drawn through the mouth of the Kanawha and the falls of the Ohio. These divisions were to compose seventeen states, ten of which north of the Ohio were to have borne the high-sounding names of Sylvania, Michigan, Chersonesus, Assenisipia, Metropotamia, Illinois, Saratoga, Washington, Polypotamia, and Pelisipia. North Ohio would have fallen into Metropotamia. The remainder of the State would have been divided between Washington and Pelisipia; Pelisipy being another name discovered for the Ohio River. But this portion of the bill was dropped by the committee, after it had been recommitted to them by Congress.

Another point introduced in the bill, but stricken out, notwithstanding the support of six

states, by the rule which required a majority of seven, was Mr. Jefferson's famous anti-slavery proposition : —

“ That after the year 1800 of the Christian era there shall be neither slavery nor involuntary servitude in any of the said States, otherwise than in punishment of crime whereof the party shall have been convicted to have been personally guilty.”

It is safe to say that, if the prohibition of slavery in the Northwest Territory had been left to depend upon this provision, all the States would have been slave states.

A supplement to the Ordinance of 1784 was offered by Mr. King of Massachusetts, in March, 1785, in this form : —

“ That there shall be neither slavery nor involuntary servitude in any of the States described in the resolve of Congress of April 23, 1784, otherwise than in punishment of crime whereof the party shall have been personally guilty, and that this regulation shall be an article of compact, and remain a fundamental principle of the Constitutions between the thirteen original States and each of the States described in said resolve of April 23, 1784.”

To show, at a single view, the contrast between these and the proposition finally adopted, the concluding article in the Ordinance of 1787 is here given : —

“ There shall be neither slavery nor involuntary servitude in the said territory otherwise than in punish-

ment of crimes whereof the party shall have been duly convicted. Provided, always, that any person escaping into the same from whom labor or service is lawfully claimed in any one of the original States, such fugitive may be lawfully reclaimed and conveyed to the person claiming his or her labor or service as aforesaid."

Mr. Jefferson's project left the door wide open. Nothing but the immediate and absolute prohibition put upon the further introduction of slavery at the Northwest (for the French had already brought it there) saved it from the persistent importunities to repeal or suspend this article in the Ordinance of 1787. The first proposition made at the first session of the territorial legislature (1798) was that the assembly give its consent to the repeal. But it was unanimously resolved to stand by the Ordinance. It is to the honor of that eccentric son of Virginia, John Randolph, that the adverse report made by him in Congress, upon one of the last of these assaults, defended the prohibition most ably; pointing to Ohio, then just admitted into the Union, as a striking proof of its wisdom.

The ordinance for the "government of the territory northwest of the Ohio," known as the Ordinance of 1787, was passed on the 13th of July, but there are indications in the proceedings of Congress that it had been in contemplation some time before September 29, 1786, when it first appears in the journal.

So much has been written and spoken of this

great statute, that any comment upon it incurs the risk of being very trite. It has become merely historical; most of its provisions having been superseded, as law, by the constitutions of the States formed under it, and admitted into the Union upon an equal footing with the original States. How little it commands the attention of our later statesmen appears in the admission of Minnesota, a sixth state within its confines, whereas the Ordinance was absolute that there should "not be more than five."

Famous for its great offspring of free states, it offers another view in which it may be regarded by Americans forever with pride. It showed how free colonies might be established and maintained by a parent state. It was the first demonstration to the disbelieving world, a hundred years ago, of the mode in which the young republic, just sprung from hard, colonial pupilage, and spurning king and parliament, would deal with its own dependencies. What airs, it was fancied, would not Congress assume towards its colonies! Would it not have to assert, like the imperial parliament, that they, planted by its hands, must be subjects of their supremacy as lawgiver? Would these Americans, or could they suffer their territories to lay their own taxes and form their own laws, and have representation in Congress besides? It was a crucial test, but it was consistently and completely met. The Ordinance was a masterpiece of statesmanship in reconciling

and vindicating every principle for which the Thirteen Colonies appealed to arms, and it remains to-day the model in nearly all respects upon which the territorial governments of the United States are constructed.

One radical difference between the territories and the parent stock entitled the experiment to much allowance. England had not planted the American colonies, and had no proprietorship or right in the land which they took. They were the work of men who had individually or by companies been left by the English government to find territory and make a country for themselves. It was the tyranny which essayed to wrest their autonomy from them, after they had worked it out unaided, that stirred up the American Revolution. The Ordinance of 1787, on the contrary, like all the territorial governments which have been modelled upon it, was established in a domain of the parent State.

The framing of the Ordinance, though supposed of late to have been a work of two or three days, bears internal evidence of long and mature deliberation in every part. There are but six sections, divided about equally between a code of temporary administration, a method for converting the territory into new states, and a compact between these and the original states, forever to remain unalterable "unless by common consent." Under these latter words the compact is deemed to have been dissolved by the equality conferred upon the new states when admitted.

The administration of this temporary government over a few French villages, and 400,000 square miles of Indian territory, extending from Pennsylvania to the Mississippi, and from the Ohio to the great chain of lakes, terminating at the far away Lake of the Woods, was committed to a governor and three judges with a secretary. A few organic rules providing for land tenures, taxation, inheritances, and the disposal of property by deeds, wills, etc., were prescribed, but all other legislation was left to the governor and judges, who were empowered jointly to "adopt and publish such laws of the original States, criminal or civil, as they or the majority of them should deem suitable and necessary," subject, however, to the disapproval of Congress. As soon as the governor should ascertain that there were "five thousand free male inhabitants of full age in the district," they were to elect a house of representatives, consisting of one for each five hundred inhabitants. This body, and a legislative council of five members, to be appointed by Congress out of ten residents of the district nominated by the House, composed, together with the governor, the general assembly of the territory, with authority to make all laws not repugnant to the articles of the Ordinance. But a superadded clause, the source of unseen harm still inhering in the institutions of Ohio, declared that no bill or legislative act whatever was to be of any force without the governor's assent. It was not merely the qualified dissent,

now known as the veto, but it enabled the governor to assert himself as a third branch of the assembly. He was also empowered, until the establishment of the general assembly, to appoint magistrates and all county and township officers. Another of his powers, which became a source of contention, was to "lay out counties and townships, subject to such alterations as the legislature thereafter might make."

The article of the Ordinance in respect to new states stipulated that there should be not less than three nor more than five. The eastern state was to be bounded on the west by a line drawn due north from the mouth of the Big Miami River to the north boundary of the United States, and would have intersected the Strait of Mackinac. But this was subject to alteration if more than three states should be established, so that Congress might form the additional state or states north of an east and west line drawn through the south bend or extreme of Lake Michigan. It will at once be seen that this was not prescribed as the south line of the new states, but as a limit. Nevertheless, upon this minute point an almost internecine contest was raised, fifty years afterward, between Ohio and a territorial governor of Michigan, known as the "Wolverine War."

Two articles of the Ordinance were in the nature of a bill of rights, without which our forefathers regarded no country as safe, and its omission in the Constitution of the United States was

made a serious objection. One of the points was a prohibition of laws in any manner affecting private contracts made in good faith ; a landmark which a month later was borrowed and incorporated into the federal Constitution. It has proved to be of incalculable security against wild legislation.

In the two concluding articles it was ordained, "There shall be neither slavery nor involuntary servitude in said territory, otherwise than in punishment of crime ;" and that "religion, morality, and knowledge, being essential to good government and the happiness of mankind, shall forever be encouraged." These were placed by the Ordinance as among "the fundamental principles of civil and religious liberty which form the basis whereon these republics, their laws and constitutions, are erected."

The men who settled Ohio believed this, and proved it by the care with which the principles summed up and consecrated in the Ordinance were preserved and handed down in the Constitutions both of 1802 and 1851 ; especially in the articles prohibiting slavery and favoring the encouragement of religion, morality, and knowledge as the means of government.

The former is that upon which the people of "these republics" have been the most intent during the century since the Ordinance and the Constitution were framed, and which by a convulsive effort has been laid at rest.

The other principle has not been sustained ; indeed, it may be said to have lost much of its force, under powerful foreign influences which have asserted themselves in American politics and laws. But that this declaration was, at the time, the fixed and general sentiment of the American people and statesmen, is undeniable. General Washington and Dr. Franklin have left no uncertainty as to this, and there were no better exponents. The colonies, in fact, were founded upon it and for its sake. It became ingrained in the very fibre of those indigenous governments and institutions which were a century and a half silently growing up to form the American republic. It was the fervent intermingling of the spirit of liberty with this reverence for religion and morality, as being the "basis of good government and the happiness of mankind," that first struck the attention of European patriots, and of which De Tocqueville was so keenly observant in his view of American democracy.

Whether it is not time that American statesmen were heeding it, let wise men consider. It is not safe to forsake the customs and principles by which a people have risen to greatness. Nor did a people ever fail of enduring prosperity and happiness by the ways pointed out in the Ordinance of 1787. Democracy, or democratic institutions, cannot rise above their fountain. In their nature they cannot be enduring without a public opinion powerfully rooted and reinforced in reli-

gion and morality. This was American democracy prior to Mr. Jefferson and the French Revolution.

The authorship of this Ordinance has lately been made a subject of curious speculation. It is certain that some eminent men were differing upon it a year before its passage. But that Nathan Dane had the chief hand in forming it as it ultimately appeared, was never doubted during his life or that of his contemporaries. Mr. Webster asserted it with emphasis in both of his speeches in the great debate in January, 1830, concerning the public lands. Chief Justice Chase reiterated it in 1833 in the historical sketch prefixed to his compilation of the statutes of Ohio. Recent discoveries, however, are supposed to displace him, and Dr. Cutler is brought forward as having given the paper its stamp and character. The subject seems to have fallen under "that morbid infirmity in literature" which delights in denying Homer and Shakespeare their works, and sometimes has not spared even Holy Writ from its rage. sic!

In the present instance there has been a remarkable industry, not only in turning certain expressions in Dr. Cutler's diary to a sense which he cannot have intended, but in avoiding the source where information should naturally have been sought. Mr. Dane's "Abridgment of American Law" contains a precise statement as to the composition of the Ordinance; pointing out his own part, and giving credit to the authors of the parts

which he did not contribute.¹ He is confirmed in his statements by the fact, which appears in the journals of Congress, that he was a member of the committee which reported the Ordinance, through all its steps, from first to last.

¹ See Appendix, No. 2.

CHAPTER VIII.

THE EARLY SETTLERS.

THE first settlers of Ohio, whoever they were, would furnish a theme for a poet; not that they reflect such beautiful lights and shadows as Longfellow has pictured in those of the Acadian coast and the prairies of fair Opelousas, but vanishing and lost in the same dim obscurity. They were; that is all. No historical trace of them remains. The French who came floating up the shores of Lake Erie must have found homes, early in the eighteenth century, among their old allies, the Hurons (Wyandots), at Sandusky, or Junundat, as they called the bay, and on the wide-spreading, flowery plains through which the river flowed to it. Yet the earliest account of Ohio, an anonymous memoir or report in 1718 concerning the Indians of Canada as far as the Mississippi, though it gives a graphic touch of geography, makes no mention of French inhabitants. Here is an extract: —

“A hundred leagues from Niagara, on the south side (Lake Erie), is a river called Sandosquet, which the Indians of Detroit and Lake Huron take when going to war with the Flatheads and other nations toward Caro-

lina, such as the Cheraquis, the Indians residing on the river Casquinampo (the Tennessee), and the Chaouanons (Shawanees). They ascend this river Sandosquet two or three days, after which they make a small portage of about a quarter of a league. Some make canoes of elm bark, and float down a small river (Scioto) that empties into the Ohio, which means Beautiful River; and it is indeed beautiful. Whoever would wish to reach the Mississippi easily, would need only to take this beautiful river or the Sandosquet; he could travel without any danger of fasting, for all who have been there have repeatedly assured me that there is so vast a quantity of buffalo and of all other animals in the woods along that beautiful river, they were often obliged to discharge their guns to clear a passage for themselves. They say that two thousand men could very easily live there. To reach Detroit from this river Sandosquet, we cross Lake Erie from island to island, and get to a place called Point Pelee, where every sort of fish are in great abundance, especially sturgeon, very large, and three, four, and five feet in length. There is on one of these islands so great a number of cats (raccoons) that the Indians killed as many as nine hundred in a very short time. The object of the Indians in making this traverse is to shorten their road considerably, and were they not to do so they must go as far as the river which flows from the Miamis,¹ and which is at the head of the lake."

There are possibilities also of white settlements at Demoiselle's fort and the Scioto Plains. A circumstance hinting at this is mentioned both by Captain Gist and the Rev. David Jones.

¹ 9 *N. Y. Historical Docs.*, 885-892.

Many of the resident traders married white women who had been taken captive when children by the Indians, and had grown up among them. It seems doubtful whether General Bouquet recovered a fourth part of the whites who were then in Ohio. How little we know of the actual state of affairs is revealed in the casual allusion by Mr. Jones to the Shawanees farmer on the Licking, with his horses, cattle, and negro slaves.

But coming to matters of fact, there were primitive settlements on the north side of the Ohio, as far down as the Muskingum, years before the government surveys and sales of lands, and upon no title but what was known as the "tomahawk right." Deadening a patch of woods near the head of a spring, cutting the initials of the claimant's name into the corner trees, and throwing up any sort of a hut, constituted an "improvement." Division lines were chiefly on the water-courses, or the top of the ridges. The earliest farms, therefore, resembled an amphitheatre. The cabin was always on the lower ground, which pleased the squatter because of its convenience; "everything came to the house down hill." When this hilly part of Ohio in the "Seven Ranges" was laid off by the surveyors' arbitrary square lines, without regard to hill or dale, there was not only a subversion of the tomahawk titles, but a total change in the aspect of the farms. The houses then, as frequently,

occupied the top of the hill. But many old settlers clung to the belief that there was more ague on the hills than in the bottoms.

This contraband population, chiefly from western Pennsylvania and Virginia, introduced by the traders and land speculators, and fomenters of all the wrongs of the Indians, must have commenced before the Revolutionary War. The Rev. Mr. Jones states that in descending the Ohio River with George Rogers Clarke and others in 1772, they saw but one habitation between Pittsburgh and Captina. This was the year that the Moravians built Shoenbrun and Gnadenhütten. But Colonel Robert Patterson found several improvements below the Hockhocking in 1776; and in October, 1778, Colonel Broadhead reported to General Washington that he had sent troops from Pittsburgh to drive off a land company who were trespassing upon the Indians somewhere opposite to Wheeling. The officer detached upon this duty reported that he had found settlements from Fort McIntosh down to the Muskingum, and extending thirty miles up the streams on the west side of the Ohio. He had evidently not executed his orders, as these people were still the chief subjects of complaint of the Indians at the treaty of Fort McIntosh in 1785. Nor was their enterprise exclusively confined to stealing land. Some of them appropriated the salt springs (Mahoning County) which had long been used by the Indians; and before their expulsion

by the military, had erected cabins, sunk vats, and made some progress in manufacturing salt, then worth six dollars per bushel. Judge Parsons subsequently purchased this township from the Connecticut Associates, and lost his life in endeavoring to develop the salt business.

Upon the receipt of Colonel Broadhead's report, Colonel Harmar, the military commandant on the Ohio, at once dispatched Ensign Armstrong with a force to expel the squatters. He reported that there were at least a dozen settlements on the west side of the Ohio, and gave the names of several of considerable population. He was informed of one at the falls of the Hocking, where there were three hundred families, but this was evidently an exaggeration. The chief men of these upper settlements were Ross and Norris; the former established at Mingo Bottom, and the latter farther down at Mercertown. At this place two justices of the peace had been elected and were exercising jurisdiction. A paper signed by more than sixty of the settlers was presented to Armstrong, begging indulgence until the winter was over. At Norristown, in the same vicinity, an armed assemblage proposed to resist, but they were intimidated by his show of hostility, and dispersed under a compromise by which all were given until the 19th of April to remove to the other side of the Ohio. Ross and a few others who were refractory were captured and imprisoned.

This attempt, however, was as inefficacious as the first. General Butler, in descending the Ohio in October to meet the Indians at Fort Finney, found Ross still in possession and purposing to go to Congress, as he announced, to vindicate himself and his neighbors from aspersion. At the mouth of the Kanawha General Butler found a town laid out upon Cornstalk's battlefield, and town lots fronting the river already sold at ten pounds each. On the back streets they were selling at five pounds each.

The history of these squatters is hardly worth pursuing. The blood of the Moravians is the "damned spot" upon their memory. The mantle of charity thrown over them by the friendly Dr. Doddridge was ill-deserved, as one discovers upon reading the simple and truthful story of the Ohio Indians as told in "Colonel Smith's Captivity with the Indians," probably the truest and most interesting picture of the life, manners, and customs of the Ohio tribes which we have.

But men of a better order superseded these. The Revolutionary War had hardly closed before thousands of the disbanded officers and soldiers were looking anxiously to the Western lands for new homes, or for means of repairing their shattered fortunes. In June, 1783, a strong memorial was sent to Congress asking a grant of the lands between the Ohio and Lake Erie. Those who lived in the South were fortunate in having immediate access to the lands of Kentucky, Tenn-

essee, and the back parts of Georgia. The strife in Congress over the lands of the Northwest delayed the surveys and the bounties so long that the soldiers of the North almost lost hope.

In 1785 General Rufus Putnam was appointed by Congress one of the surveyors of the Seven Ranges, but as he was engaged at the time in similar work for Massachusetts in the District of Maine, he obtained the appointment of General Benjamin Tupper temporarily in his place. Tupper entered immediately into the work, and on returning to Massachusetts at the close of the season, met General Putnam and gave him a full report of the country. The result was a meeting of officers and soldiers, chiefly of the Massachusetts, Rhode Island and Connecticut lines, at Boston, March 1, 1786, when they formed a new Ohio Company for the purchase and settlement of Western lands, in shares of one thousand dollars. General Putnam, General Samuel H. Parsons, and the Rev. Manasseh Cutler were made the directors, and selected for their purchase the lands on the Ohio River situated on both sides of the Muskingum, and immediately west of the Seven Ranges.

The treasury board in those days were the commissioners of public lands, but with no powers to enter into absolute sales unless such were approved by Congress. Weeks and months were lost in waiting for a quorum of that body to assemble. This was effected on the 11th of July,

and Dr. Cutler, deputed by his colleagues, was in attendance, but was constantly baffled in pursuing his objects. The difficulty was not so much in the passage of the ordinance by the government, for that went through unanimously on the 13th, as in closing the arrangements for purchasing the land. This was the first boon which Congress had to dispense, and it was disposed to make much of it. There were wheels within the wheel also, in respect to the offices to be conferred in the territory. The governorship had to be adjusted. General Parsons was desired for the office by the Ohio Company. There was a counter influence for General St. Clair, then president of Congress, though apparently he took no part in it. Another obstacle arose from rival combinations of speculators in Western lands; one of these consisting, as stated by Dr. Cutler, of a "number of the principal characters in the city of New York," where Congress was then sitting. These had the advantage of being represented by Colonel William Duer, then secretary of the treasury board.

The combination of obstacles was overcome by a secret arrangement which provided that St. Clair should be appointed governor, and the domain of the Ohio Company enlarged by an addition of land on the western side for the benefit of the New York Associates. The effect, as Dr. Cutler very candidly noted in his diary, was that "matters went on much better." But the conse-

quences ultimately were unfortunate. St. Clair proved not to be the man for the place, and the hidden interest of the New-Yorkers, who never paid for their part of the purchase, led to the frauds practiced by the "Scioto Company" at Paris.

But Congress was still dilatory about the contract, though, as Dr. Cutler expressively says, "every machine in the city that it was possible to work was set in motion." The members were disposed to insert conditions which were not satisfactory to the Ohio Company. But the doctor carried his point by formally intimating that he should retire, and seek better terms with some of the States, which were offering their lands at half the price Congress was to receive. The grant to the Ohio Company, upon the terms proposed, was voted by Congress, and the contract formally signed October 27, 1787, by the treasury board, and by Dr. Cutler and Winthrop Sargent as agents of the Ohio Company.

Two companies, including surveyors, boat-builders, carpenters, smiths, farmers and laborers, forty-eight persons in all, with their outfit, were sent forward in the following months of December and January, under General Putnam as leader and superintendent. They united in February on the Youghiogheny River and constructed boats. One was named the *Mayflower*, manifestly under the impression that they were going to wilds where no whites had yet existed. Embarking with their stores, they descended the Ohio, and on the 7th

of April, 1788, landed at the Muskingum. On the upper point, opposite Fort Harmar, they founded their town, which at Boston had first been named Adelpia. At the first meeting of the directors, held on the ground July 2d, the name of Marietta was adopted, in honor of the French Queen Marie Antoinette, and compounded of the first and last syllables.

Under General Putnam's vigorous management surveying, felling, and grubbing soon reduced the forest and ground to order. The farmers and builders were then set at work. A hundred and thirty acres of land were put under cultivation. The first building, a large one of hewn logs, two stories in height, with block-houses at the angles, was erected on the Campus Martius. This surmounted an ancient fortification of the Mound-builders, of which the parapets, twenty feet in height, still remained, crowned with trees of ancient growth. Into this stronghold the women and children were immediately placed, as Indians were at hand. Captain Pipe happened at the time to be encamped near the fort with some dusky companions. In justice, it must be said that he had now ceased from mischief, and in his later days enjoyed the reputation of a virtuous and conservative old gentleman.

Thus much accomplished, Putnam proceeded to lay off the in-lots and out-lots of the town, for distribution. Numerous accessions of emigrants arrived, among whom in May came Colonel John

May, the earliest journalist of the colony, and in June Judges Parsons and Varnum, all of them members, and the two latter directors, of the company. The 4th of July was celebrated by the first pageant in the Northwest in its honor. There was a procession of the citizens and soldiery, an eloquent oration by Judge Varnum, and a barbecue, the most ample that the river and the forest could supply. This was soon followed by the arrival of Governor St. Clair, and on the 17th of July the government of the Northwest Territory was formally installed. Washington County, with its courts and officers, was established and set in motion, and at the end of the year the little capital could show a population of a hundred and thirty-two men, besides women and children. To these were added in the following year one hundred and fifty-two men, fifty-seven of them with families. Of what sort these people were, deserves to be learned from an eye-witness wholly disinterested. Major Denny, of the army, then posted at Fort Harmar, sets down these impressions in his diary: —

“These men from New-England, many of whom are of the first respectability, old revolutionary officers, erected and are now living in huts immediately opposite to us. A considerable number of industrious farmers purchased shares in the company, and more or less arrive every week. . . . These people appear the most happy folks in the world, greatly satisfied with their new purchase. They certainly are the best informed, most

courteous and civil strangers of any I have yet met with. The order and regularity observed by all, their sober deportment, and perfect submission to the constituted authorities, must tend much to promote their settlements."

Why these intelligent people should have pitched upon the hill country of the Muskingum and Hockhocking was long a marvel, though the later discoveries of the vast beds of iron, coal, and salt hidden in its depths has justified them as wiser than they knew. There was a tradition that Colonel Zane, of Wheeling, was consulted by them as a man thoroughly versed in the country, and that he advised them to go to the Miami valley. But as Captain Hutchins was supposed to know better, and General Parsons had been at Fort Finney the year before and should have known, the shrewd Yankees suspected, it is said, that, as the Miamis were the great war-path of the Indians, Zane had a sinister design of placing them between himself and harm. Parsons, as one of the directors, had taken the responsibility in 1787 of opening negotiations with a committee of Congress for a purchase on the Scioto. But the Muskingum was so much preferred that the directors took the business out of his hands.

The survey and distribution of the Ohio Company's lands brought so many emigrants to the Muskingum in 1790, that Marietta was increased to eighty houses. Settlements were extended to Belpre (Belle Prairie) and Newbury, twelve or fifteen miles down the Ohio, and to Big Bottom,

thirty miles or more up the Muskingum. In January, 1791, General Putnam estimated that there were in these settlements two hundred and eighty men capable of bearing arms. The danger from the Indians was fearfully proved by the destruction of the upper settlement at Big Bottom, by Delawares and Wyandots, in January, 1791. Strong block-houses were erected at each of these points. At Belpre there were three, the largest of them known as the "Farmers' Castle." This lovely border of the Ohio became famous for its orchards of the apple and peach, and just opposite was the island which in a few years was to become the famed home of the Blennerhassets.

Whatever their privations and dangers, the adventurers happily were spared any apprehension of famine. Their fields and gardens were not only fruitful beyond their utmost expectation, but the abundance of fish, flesh, and fowl was simply prodigious. Buffalo, deer, and bear seemed to wait upon them. Geese, ducks, and pigeons swarmed. The fish fairly infested the rivers, and were of such superlative size that if the accounts of them were not sustained by concurrent statements of General Harmar, Major Denny, Dr. Hildreth, and other like authority, they might be set aside as fish stories. Colonel May asserts that a pike weighing one hundred pounds was served up at the Fourth of July barbecue, and catfish of sixty and eighty pounds were often caught. Another pleasing reminiscence of the colonel's is that this barbecue lasted until midnight.

Meanwhile the Miamis, though slighted by the Ohio Company, had fallen into other hands, and soon took the first honors away from the Muskingum. The settlers to this section came, as it were by chance, from New Jersey. It will be remembered that, in the fierce conflict between the Indians and Kentuckians, this valley, and particularly the lower part along the Ohio, converging on the Licking, had become exceedingly dangerous, and indeed was a sealed book little known to the whites. The constant raids back and forth had given it the terrible appellation of the "Miami Slaughter House." Still one wonders that whole fleets of pioneers should have floated past a spot presenting to their eye such attractions of fertility and beauty as that which lay between the two Miamis. General William Lytle relates that in April, 1780, a fleet of sixty-three boats, filled with emigrants and their families, more than a thousand fighting-men among them, were approaching the point where Cincinnati stands, when their pilot boats gave signals that a number of Indians were encamped on the north bank, opposite the Licking, and preparing to attack. The fleet landed half a mile above, and five hundred men went to encounter them. The Indians quickly discovered that they were outnumbered, and fled up Mill Creek too rapidly for their pursuers, though followed for four or five miles. Only two months later Captain Bird, in command of six hundred Indians and Canadians,

with artillery, came down the Big Miami and ascended the Licking. Many collisions occurred in this vicinity, but not between forces of such magnitude. One of the most fatal was in March, 1788, when three boats were captured near the Big Miami, containing Mr. Samuel Purviance, a prominent citizen of Baltimore, with four or five gentlemen from Maryland, Mons. Ragant and two other French gentlemen, mineralogists and botanists on an exploring expedition, with eight or ten other persons; all except two were killed or captured. The fate of Mr. Purviance was never ascertained, though General Harmar made a long but fruitless search.

But in the summer of 1786, whilst Dr. Cutler was wrestling with Congress for the Muskingum purchase, if not earlier, Benjamin Stites, a trader from New Jersey, happened to be at Washington, a few miles back of Limestone (Maysville), and as a volunteer joined a party of Kentuckians in pursuit of some Indians who had stolen their horses. The thieves were traced down to the Little Miami, where on rafts they had crossed the Ohio, swimming the horses. Following their example, the pursuit was continued so far that the Kentuckians gave it up, but, at the instance of Stites, crossed over to the Big Miami, and thus he gained a view of the rich valleys formed by these rivers.

Possessed of this knowledge, he returned without delay to New Jersey, and confided his discov-

ery to Mr. John Cleves Symmes and other men of influence. An association of twenty-four proprietors, much in the form of the Ohio Company, was formed, among whom were General Jonathan Dayton, Elias Boudinot, and Dr. Witherspoon, as well as Symmes and Stites. To make sure of the scheme before entering into it, Symmes made a journey to the Ohio, descending to the falls, with a special eye to the shore between the Miamis. The associates, being convinced by his report that Stites had not overdrawn the picture, resolved to proceed. A petition was presented by Symmes to Congress, August 29, 1787, on behalf of himself and associates, that the Treasury Board be authorized to make them a grant, on the same terms as had been conceded to the Ohio Company, for all the lands on the Ohio between the two Miamis, bounded on the north by an extension of the north line of the purchase of the Ohio Company, except that instead of appropriating two townships as in that grant for a university, one only should be set apart in the Miami purchase for the use of an academy.

It does not appear, so imperfectly were the journals of Congress kept, that this petition was granted, nor is it even on record that it was presented. Circumstances, however, show that it was referred to the Treasury Board about October 23, for action at their discretion, and that there were negotiations between them and Symmes on the subject. But without awaiting their decision,

and in a credulous reliance that the grant would be just what he had asked, Symmes proceeded as though the bargain were closed, and on the 9th of November gave Stites a covenant for ten thousand acres of the best lands in the valley, at the price of five shillings an acre, payable in certificates of the public debt. This was the medium in which the government had agreed to receive payment for the Muskingum purchase, the price being two thirds of a dollar per acre. Symmes expected the same.

He issued a prospectus, also, on the 26th of that month, announcing that a contract had been entered into between himself and associates and the Treasury Board, and inviting all persons to take their choice of any township, section or quarter section in the whole extent of country for which he had applied, the whole being about two million acres, which, until the 1st of May following, he announced could be had, subject to prior applications, at the price of two thirds of a dollar per acre. The price after that period was to be a dollar per acre. He reserved for himself, as the site for a town he proposed to lay out, the nearest entire township at the confluence of the Big Miami and the Ohio, and the fractional townships on the north, south, and west sides of it. In this town every alternate lot was offered, free of charge, to applicants who should within two years build a house or cabin thereon, and occupy it with a family for three years. The prospectus was twenty-

two pages in length, and promised health, wealth, and blessings too numerous to be recounted.

On such terms of picking and choosing, applicants were plenty. The best lands were soon taken. Among others, Matthias Denman, of New Jersey, took up the entire section of land immediately opposite the mouth of the Licking River. He also had a town in view. In those days there was no surer card for a new town than to place it at the mouth of a river.

The improvidence and mismanagement of Symmes were all at once divulged, and it caused immeasurable misfortune to him, and loss to the people who had trusted to his lavish proposals. The Treasury Board refused to concede the entire front on the Ohio, and would execute no contract at all, until October 15, 1788, when General Dayton and Daniel Marsh intervened between them and Symmes in behalf of the associates. The board consented to a grant limited strictly to twenty miles on the Ohio, beginning at the mouth of the Big Miami, and to be measured "along the several courses thereof;" the interior, between the Big Miami and a line extending parallel with its general course northwardly from this twenty-mile point, to be bounded north by a line which would include a million acres. In other words, the commissioners were unwilling to part with so much front upon the Ohio as Symmes demanded.

This excluded the lands sold to Stites and

many others, on or near the Little Miami, and beyond this north line. It also dropped the academy township. Congress and the local courts, in which Symmes was one of the judges, were plagued for years by the animosities and litigation growing out of violated contracts, between him and his vendees, creditors, and associates. The subject properly belongs to another chapter on the land system of the State. It may be said, however, that all contentions were finally adjusted in May, 1792, by acts of Congress, which extended the Miami purchase along the Ohio the entire distance between the two Miamis, but limited on the north by a line extending due east and west, between these rivers, so as to include 248,540 acres, besides reservations, that being the entire quantity for which Symmes and his associates had paid the stipulated price. The reservations were three sections in each township for the United States, — one for the purposes of religion, one for schools, one complete township for an academy and other public schools and seminaries of learning, a lot one mile square at the mouth of the Big Miami, and one of fifteen acres for Fort Washington. The people who had purchased lands from Symmes beyond these limits were granted the right of preëmption on further payment to the government of two dollars per acre. Thus ended the unhappy controversy for which Judge Symmes, in his will, left an imprecation upon the ingratitude of his coun-

trymen, but which in truth was attributable to his own utter want of method or judgment in matters of business.

Returning now to the various schemes for towns in the Miami purchase, we find Symmes, Stites, and Denman all busy, in the summer of 1788, organizing their plans for the favor of posterity. Stites was foremost, and with a strong party of friends and followers, and provided with everything ready for clearing and building, he landed, November 18, 1788, just below the Little Miami, and in a few days had housed and fortified his company against the enemy. He gave his town the name of Columbia.

Symmes and his party were at Limestone, with Stites, but waiting for the military escort to guard them at Fort Finney. He might have gone there as safely as Stites. Denman also arrived, bringing neither colony nor supplies. But with skillful generalship he executed a flank movement by which he gained valuable auxiliaries and strength. He there met Colonel Robert Patterson, of Lexington, Kentucky, who was himself meditating a purchase from Symmes. Denman accompanied him to Lexington, and there formed a partnership with Patterson and John Filson in the town site which he had secured, opposite the mouth of the Licking. Colonel Patterson was a native of Pennsylvania, but had emigrated to Kentucky at an early period, and became a distinguished officer in the battles and expeditions against the Indians

and English. He was the founder of Lexington. Filson was from Chester, Pennsylvania, and commenced life as a schoolmaster. Like many of that profession he had turned surveyor and emigrated to Kentucky. Besides being a considerable dealer in lands, he had, in 1784, published the first account of Boone, and the settlement of Kentucky.

These three entered into articles, headed "with reference to Losantiville," formally executed August 25th, by which Denman, in consideration of twenty pounds, Virginia currency, to be paid by Patterson and Filson, transferred to each an equal interest with himself in the section of land opposite the mouth of the Licking. They agreed to lay out a town and establish a ferry there, and that "every institution, determination, and regulation concerning it should be the result of the united advice and concert of the parties." To Filson was committed the framing of the town plat, and he took Philadelphia for his model. The name of Losantiville was adopted. This has been denied by some of the antiquaries, but the paper signed by the proprietors is conclusive. This they advertised in the "Kentucky Gazette," August 30. The 15th of September was the day appointed for a large company to meet at Lexington, and make a road to the mouth of Licking, provided Judge Symmes should arrive. Thirty in-lots of half an acre each, and the same number of out-lots, four acres each, were offered as free gifts to such set-

tlers as should become residents before the first day of April following. In the next paper, Colonel Patterson announced that the departure of the company was postponed to September 18th, in order to meet Judge Symmes at the place on Monday the 22d, "and the business will then go on as proposed."

On the 22d of September, 1788, a large company of Kentuckians, with Colonel Patterson and Filson at their head, arrived on the ground, and were there met by Judge Symmes and Israel Ludlow, chief surveyor of the Miami Associates, who, with Denman, came down from Limestone. The parties and interests thus assembled on what is now the public landing or quay of Cincinnati, pursuant to authority derived through Symmes and the public dedication by the proprietors, formulated by Filson's plat, though not so stately a pageant as that in July at Marietta, were the inauguration of Cincinnati. It was impossible to proceed to the immediate location of the plat, and the donation of lots, or settlement, was not to take place until the 1st of April following. The surveys could not be commenced, nor Denman's section fixed, until the twenty-mile point was ascertained, which was to be the key to the whole enterprise.

Ludlow was immediately detached for this purpose, and in a few days "took the meanders" of the Ohio. This measurement proved that Denman was within the line. He and a number of

the guests remained encamped on the ground where Colonel Clarke's blockhouse, erected in 1780, was still standing. Judge Symmes, with Patterson, Filson, and a large number of the Kentuckians, rode out twenty miles to examine the country. On the Big Miami they encountered an encampment of Shawanees. The Kentuckians instinctively proposed to open an attack, but were forbidden by Symmes. He had assured the Indians of peace. This interference was so offensive to the border men that nearly all wheeled about and returned to the camp. Filson became alarmed, "had no rest afterwards," as Symmes subsequently reported, "and attempting to escape to the body of men left at the Ohio, was destroyed by the savages." As to this nothing more is known than that on the reassembling of the parties Filson was missing. To this day his actual fate remains a mystery.

This, however, by no means defeated the dedication of Losantiville; a ridiculous compound of French, Latin, and Greek by the unfortunate schoolmaster intending to signify "the town opposite the mouth of the Licking."¹ The assembly separated, but in Patterson's phrase, "the business went on." Symmes, Denman, and Ludlow returned to Limestone with Patterson, and there effected an arrangement by which Ludlow acquired Filson's interest and became the surveyor and principal agent in the town affair. Denman

¹ L[icking]os-anti-ville.

returned to New Jersey. Patterson and Ludlow, with a party of twelve, chiefly surveyors and assistants, returned to Losantiville. Symmes reported that they left Limestone December 24th, to form a station and lay out the town. The time of their arrival is supposed to date the settlement of Cincinnati, but exactly when it was has baffled all research. Mr. Perkins, in his "Annals of the West," incomparably the most intelligent guide in the early history of the West, has noted it as a curious fact that "the date of the settlement of Cincinnati is unknown, though we have the testimony of the very men who made it."

Symmes still tarried at Limestone, waiting for the treaty of Fort Harmar, and particularly for the army contractor who was to bring supplies for his guard of soldiers. In the latter part of January, 1789, came a flood in the Ohio, the greatest that had been known, and big also with consequences to the three rival towns. It began to subside on the 29th, and Symmes embarked with his colony for Miami City. They found Columbia submerged, only one house having escaped. "Losantiville suffered nothing," he said, "from the fresh." In truth, there was nothing there to suffer. But as they approached Miami City they found it to be a dreary waste of backwater. The fleet stopped at North Bend. The disaster was not only fatal to the embryo metropolis, but Fort Finney being made untenable, Captain Kersey with his soldiers abandoned Symmes, and betook

himself to the post at the falls of the Ohio. It was a serious blow to Symmes' hopes and prospects. In a letter to the Secretary of War he censured Kersey, and also complained of the retaining of the strong garrison at Fort Harmar; urging that the Miami settlements be at once sustained.

His associates joined in this urgent request, but the consequence was even more untoward. Major Doughty was sent down in August, to "choose ground and lay out a new work for the protection of the people settled in Judge Symmes' purchase." He arrived at the Little Miami on the 16th; and after reconnoitering for three days, down to the Big Miami, for an eligible situation, reported on the 21st to Colonel Harmar that he had "fixed upon a spot opposite to the Licking River, which was high and healthy, abounding with never-failing springs, and the most proper position he could find for the purpose."

This settled the question. Whatever Cincinnati may have suffered since by floods, she undoubtedly owes her start to that of 1789. Major Doughty, with two companies, under Captains Ferguson and Strong and Quartermaster Pratt, companies containing a number of artificers and mechanics, took possession of the ground on the Ohio immediately east of the town plat, and built Fort Washington on the second or upper bank. As described by Colonel Harmar, it was a solid, substantial fortress of hewn timber, about one hundred and eighty feet square, with block-houses at the four angles, and two stories high.

On the 29th of December Colonel Harmar occupied the new fort as headquarters, with the larger part of his regiment, leaving two companies at Fort Harmar. On the 2d of January, 1790, Governor St. Clair arrived on a tour to the French posts at the West, and spent three days in establishing the county of Hamilton. On this occasion, as already noted, the name of Losantiville was changed to that of Cincinnati. Judge Symmes, who had part in the occasion, wrote on the 9th, "The governor has made Losantiville the county town by the name of Cincinnati, so that Losantiville will become extinct." The governor oddly enough omitted in his diary any mention of this visit.

Cincinnati for some years was but a garrison town, without the better class of settlers who had come to Marietta, Columbia, and North Bend. The houses were but cabins and the inhabitants migratory. General Harrison's description of Cincinnati at this time indicates that the curtain might as well be drawn. He arrived as a young ensign in November, 1791, and reported to General Harmar just as the wretched remnants of St. Clair's rout were coming in. "The village, then composed of twenty-five or thirty cabins," he says, "afforded nothing to relieve their wants. But the inhabitants, as well as the sutlers, appeared to have an abundant supply of whiskey, for which their unhappy victims exchanged the remains of their scanty pay. I certainly saw

more drunken men in the forty-eight hours succeeding my arrival at Cincinnati than I had in all my previous life." This was the blighting effect of the war. But in three years Cincinnati must have worn a different aspect. In 1793, one of the infantry officers in Wayne's army tauntingly writes to his comrades, the dragoons, across the river, "We have taken quarters at Munson's tavern, where we live in clover." It was not until the treaty of Greenville, however, that it acquired any growth. The population in 1800 was but seven hundred and fifty.

Dr. Goforth, the most respectable physician at that time in Ohio, describing the settlements in a letter to a friend, besides the places already referred to, mentions South Bend on the Ohio, Dunlap's Station or Colerain on the Big Miami, and Covalt's Station on the Little Miami. The "Stations" were strong buildings of logs in the fashion of blockhouses, the upper story projecting over the lower story and pierced with loopholes for riflemen. To these, in case of alarm, the neighboring farmers betook themselves with their families. They were impregnable to the Indians, except by fire communicated by arrows.

Farther up the Ohio emigrants of another sort had arrived, people born to misfortune. They were refugees from France, who, fleeing the impending reign of terror at Lyons and Paris, had been trapped by sharpers, who pretended, under the name and title of the Scioto Company, to

sell them lands on the Ohio River. How that company originated, and clothed itself with the pretense of title, under which the frauds were perpetrated, has been explained in part. The purchase by the Ohio Company was enlarged, it will be remembered, to make room for some New Yorkers, represented by Colonel Duer. Congress authorized a sale of all the land between the Seven Ranges and the Scioto River. This was divided by the Treasury Board into two contracts, but of the same date. One included a tract on the Ohio River, bounded on the east by the seven ranges (five or six miles above Marietta), west by the west line of the seventeenth range, and north by a line which would include a million and a half acres, besides reservations. The reservations were two townships for a university, and five sections out of every other township; two of which were for the support of religion and public schools, and the other three for disposal by Congress. The other contract included the lands between the seventeenth range and the Scioto River. By a special article in the first-mentioned contract, the Ohio Company were admitted at once to the possession and use of the lands east of the west line of the fifteenth range, containing half the purchase. A circumstance material to be observed is that the west line of this fifteenth range intersects the Ohio below Gallipolis.

Two days after these contracts were executed, the agents of the Ohio Company transferred the

western portion in accordance with the arrangement already made between Dr. Cutler and Colonel Duer. The transaction, so far, seems to have been approved by a meeting of the directors of the Ohio Company on the 21st of November, at Boston. Under these arrangements, apparently, an association of persons at New York, styled the Scioto Company, sent Mr. Joel Barlow as their agent to Europe, in June, 1788, to dispose of these lands. He some time afterwards employed as assistants De Saisson, a Frenchman, and William Playfair, a civil engineer, residing at Paris. Playfair was a brother of the distinguished mathematician of Edinburgh, and had a conspicuous hand in the destruction of the Bastile. Advertisements and maps of a highly imaginary colony were circulated, and lands on the Belle Rivière were offered for sale at tempting rates. They were represented as being immediately adjacent to the settled and cultivated country, and having charms of climate, health, and scenery such as to rival Arcadia or the Vale of Tempe. Hundreds of people seeking for chances to emigrate were thus inveigled to the Ohio.

It is usually stated that their emigration occurred in 1790, but Governor St. Clair, in his report to the President at New York, just before Harmar's campaign, stated that a considerable number had arrived in the territory in the fall of the year previous. On his late return from the West he had found about four hundred of them at

a place three miles below the Kanawha, which they had named Gallipolis. A hundred more were waiting at Marietta, and another hundred were on their way through Pennsylvania. They were living in long rows of cabins provided for them by the Scioto Company. They seemed to him to have no useful employment, and were not only discontented, but many of them were disposed to be mutinous. He had stopped to make them a visit, and immediately on landing a deputation waited upon him and presented a paper in which they recited their wrongs. As he was wholly unacquainted with their contracts, and did not choose to rely upon their statements, nor on those of the agent of the Scioto Company, who was residing there, he had entreated them to have patience until the matter could be investigated by the proper authorities. But as they were in great dread of the Indians he had advised them to organize themselves at once for defense, as well as for their own peace and order, by selecting officers, civil and military. He had directed that they should send him the names of these as soon as practicable, that he might regularly appoint them.

These people were not all carvers, gilders, peruke-makers, or pastry cooks, as often represented. Many were farmers and mechanics, and some were men of education and capacity. But it does not appear that, as a community, they made any effort to help themselves out of the difficulty into which

they had been duped. Their project, if they had any, was sunk and lost, as Governor St. Clair apprehended, in "disappointment and chagrin. An interested speculation of a few men, pursued," as he said, "with too great avidity, reflected some disgrace upon the American character, while it involved numbers in absolute ruin, in a foreign land."

This scandalous transaction for a while excited intense indignation. But it was so skillfully smothered by the donation of land which Congress made in March, 1795, to relieve the survivors, and known as the French Grant, that it is difficult to trace with accuracy who were the contrivers and perpetrators of the cruel swindle. A retributory feature in it was that the sub-agents also swindled the principals. The most authentic statement, perhaps, is a report by the Attorney General to the Senate, in March, 1794, upon the petition of the French for relief. Only a few of its points can be mentioned.

That to which he called attention, among the first, was that the town and lands just below the Kanawha, to which the emigrants had been sent by Colonel Duer on landing, were not in the tract originally assigned to the Scioto Company, but farther up the river, and much within the limits of the Ohio Company's land. The Ohio Company, he observed, had made no objection to this for some time, notwithstanding the notoriety of the fact. This had been explained by the

statement of a member of Congress, that the original purchase by Duer and his associates had become impracticable by the great rise in the price of certificates, and that a new arrangement had been made to accommodate the French immigration.

The new arrangement was a sale by the Ohio Company to the Scioto Company of a tract of one hundred thousand acres at the west end of their lands. This included the lands at and near to Gallipolis, so conspicuously pointed out in the maps and deeds which Barlow and his brokers at Paris had been issuing. The deed for this purpose had once been seen, the attorney-general stated, by a committee of the House of Representatives, and he was satisfied that it was an absolute conveyance. This deed had since been given up and cancelled, on the ground that the purchase money had not been paid. On this latter point there was no evidence. No one had appeared for the Ohio Company in the investigation.

Another surprising point in this report is the version it gives of that very obscure subject, the original transfer by the Ohio Company to Duer and his associates. There was a separate contract, as we have seen, between the Treasury Board and the Ohio Company for that part of the grant by Congress which lay between the seventeenth range and the Scioto River. The attorney-general found that it had not been transferred to Duer and his associates, entire. The

transfer, made two days after the Ohio Company acquired the contract, was but of a moiety only. A half, therefore, was retained, and it was agreed that Messrs. Cutler and Sargent and their associates should have an interest in the profits arising from the sales, and that Duer should employ agents and manage the disposal of the lands in Europe or elsewhere. To secure the Ohio Company in their right of preëmption, which was dependent upon a further payment of five hundred thousand dollars, in certificates, to the Treasury Board, Duer engaged to advance them one hundred thousand dollars, part of which was to be reimbursed by subscriptions to be raised by the agents of the Ohio Company.

Whether or no these transactions of their agents were authorized by the Ohio Company, the attorney-general left undetermined, like the question as to the consideration of the deed, for the want of proper evidence. He points to it, however, as a significant circumstance, that the agents of the Ohio Company two years previously, when soliciting the donation of one hundred thousand acres of land which Congress voted to them April 21, 1792, had stated this grant to the Scioto Company and the loss they were likely to sustain by it, in order to enforce their claim before a committee of the House of Representatives. This, perhaps, was the occasion when the deed was seen. Another circumstance indicating how closely the agents and officers of the Ohio Com-

pany were identified in laying out the town and disposing of the lands at Gallipolis appears in General Putnam's superintendence. It was through him, as appears by the statement of Mr. J. P. R. Bureau, one of the most respectable of the French settlers, that Major Burnham and a considerable force of mechanics and laborers were employed previously to the arrival of the French to clear the land and erect the cabins, block-houses, etc., for their reception. It seems, also, from General Harmar's correspondence, that General Putnam was soliciting subscriptions in June, 1790, for shares in the "Scioto speculation."

The attorney-general, assuming the facts, concluded that the French settlers might have a valid title in equity against the Ohio Company for their lands. But as there was no court in the Northwest Territory competent to determine such cases, and any further delay or uncertainty added to the distress which they had already undergone must be fatal, he recommended the grant of lands which the petitioners sought. Congress adopted his view and appropriated a tract of twenty-four thousand acres of land on the banks of the Ohio (in Lawrence County), to be divided in equal lots among the French inhabitants actually remaining at Gallipolis November 1, 1794, all widows and all male persons above the age of eighteen years participating. An addition of twelve hundred acres was granted for some who had been prevented from sharing in the first grant.

It was of little avail. The sufferers, most of them, were scattered, in despondency, or dead, before the relief came, and those who received it were not much better off than before. They were visited in the summer of 1796 by their countryman, Volney, who found them still at Gallipolis, forlorn in appearance, with pale faces, sickly looks, and anxious air, still inhabiting a double row of whitewashed log huts, patched with clay, damp, unwholesome, and uncomfortable. But, he concludes, that severe as the hardship was for men brought up in the ease and indolence of Paris, to chop trees, to plow, to sow, to reap, to labor in the field or the barn, in a temperature of eighty-five to ninety-five degrees, it was in some degree imputable to their own infatuation, as the French had no faculty like that of the English, Irish, or German emigrants for settling a new country. A visit to Vincennes convinced him that Gallipolis was a mistake.

Among the men of superior intelligence and position who were victimized in this knavery, none better deserves mention than the Count Malaria. He was a soldier, and happened to descend the Ohio with some of the officers who were about to join in General St. Clair's campaign. He volunteered his services, and was appointed one of St. Clair's aids. In the defeat, November 4, 1791, he was wounded, but escaped the massacre. His gallantry won him great credit. He was soon recalled to France in the king's service,

and was again wounded in battle, besides losing most of his fortune by confiscation. But he retained his admiration for American democracy. In a letter to Governor St. Clair, deploring the excesses of the French, he exclaimed, "Here they cut each other's throats, each struggling for the power. Yours is the only country to live in."

So far, the Virginians had been interdicted by a resolution of Congress (July 17, 1788) from entering lands north of the Ohio on their military warrants, as these were to be available only when there was a deficiency of good lands in Kentucky. Surveys and entries, nevertheless, had been made the first, it is said, on August 1, 1787, at the mouth of Eagle Creek. But the restriction ceased August 1, 1790. In December, Nathaniel Massie, a Virginian, one of the first and most enterprising surveyors and land operators in the district, established the town of Massieville (Manchester), twelve miles above Maysville, where thirty families were settled in a well-picketed stockade and blockhouse; the station of the greatest danger, probably, on the river.

From the year 1787 to 1796, that is to say, more than half the interval between Governor St. Clair's inauguration and the formation of Ohio as a State, this thin fringe of villages and adjacent settlements along the north bank of the Ohio, with a white population of not more than five thousand all told, was the inception of the new State which, in a few years, was to reach from the Ohio to Lake Erie.

The Lake Shore was as yet wholly avoided. Under French and English rule it had all the attraction, and the Ohio none. The inversion was due chiefly to the menacing border of English and Indians, but in no small degree to the pretentious sovereignty still kept up by Connecticut. This was a "barren sceptre" every way, but a rare example how persistence may wear away rocks.

The untimely tenacity of Connecticut during the war, and the subsequent effort of Congress to quiet the title of the United States, had so far yielded, as already seen, that in September, 1786, Congress accepted a qualified cession from Connecticut of all territory south of the forty-first degree of latitude, and west of a line one hundred and twenty miles west of Pennsylvania. The space thus left became known as the Connecticut or Western Reserve. A tract of one hundred miles, next west of Pennsylvania, had been released by Connecticut in 1755 to one Samuel Hazard, on condition that the king should grant a patent. His son Samuel applied to the Connecticut assembly in 1774 for a confirmation, representing that three or four thousand people, if it were granted, would remove there and form a colony. This was refused.

In May, 1792, a donation of half a million acres, at the west end of the Reserve, was bestowed by Connecticut upon her citizens who had suffered by "incursions of the enemy during the

late war," and hence known as the Firelands. The remainder of the tract between the lake and the forty-first degree of latitude, estimated to be 3,200,000 acres, was sold by Connecticut in 1795 to the Connecticut Land Company, composed of about three hundred and twenty of the wealthier citizens of the State. The price was \$1,200,000, and this was converted into a state school-fund. The two companies were formally incorporated by Connecticut, who thus kept up her form or show of jurisdiction, but after the establishment of Ohio as a State they were obliged to rehabilitate themselves with new charters and powers. These pretensions seriously hindered the settlement of the country. Few of the proprietors in either of the companies seemed disposed to risk their lives or happiness in seeking homes on their lands, and few people were disposed to buy their titles. The first settlement or landing of Connecticut people in the Reserve was on July 4, 1796, at the mouth of Conneaut Creek, the northeast corner of Ohio. It was a company of fifty-two persons, two of them women, led by Moses Cleaveland, a lawyer of Canterbury, Connecticut, and a pioneer of whom the people of the Lake Shore justly pride themselves. He was sent out as the general agent of the Connecticut Land Company, with Augustus Porter as chief, and five others as assistant surveyors. These and their assistants composed the party, Joshua Stowe being the commissary. Their first essay

was to celebrate the day with double honors. Though the feast they spread was not as ample as that which at Marietta' had inaugurated the Fourth of July in the Northwest, it was worthy of that patriotism and pride with which the day was kept for two generations in Ohio.

The next morning they proceeded to the erection of "Stowe Castle," a log edifice sufficiently commodious to hold the commissary's stores, and afford a shelter for the mothers and their children. A harmless band of Indians (Massassaugas) occupied the vicinity. Porter and his assistants began work by establishing the south line of the Connecticut claim, along the forty-first parallel, from the west boundary of Pennsylvania to the Indian line, just established between the Cuyahoga and the Tuscarawas. In fixing the initial point at the Pennsylvania line, it has been stoutly insisted of late that by imperfection of instruments half a mile too much was taken, though corrected as the line approached the portage. But the error is as stoutly denied. The southeastern townships of the Connecticut claim were also laid off, and one of them immediately secured by John Young, the founder of Youngstown.

Thus much accomplished, the surveyors proceeded up the Lake Shore to the Cuyahoga River, where the western point had long been a depot for the Detroit and Pittsburgh traders. Cleveland's surveyors landed on the opposite point and

laid out the town. In his honor, as representative of the proprietors, his name was given to it, but stands transformed to Cleveland. The dropping of a letter was necessitated, it is said, to fit the headline of the small sheet on which the first newspaper of the town was printed.

Until the following year two families constituted the town. The western point was, and long had been, a place of consequence to the Indians as well as to traders. Evan's map of 1755 marks a "French house" near there. At a later period Duncan and Wilson, the largest traders between Pittsburgh and Detroit, erected a log warehouse for the business which was carried by horse trains between those points. Zeisberger and his little band of refugees also made their landing here in 1786, when they returned from Detroit and Canada to seek their old homes.

Here the colonization of New Connecticut halted for some years, under adverse circumstances. In the mean time events of importance occurred upon the Ohio to which it will be necessary now to return.

CHAPTER IX.

ST. CLAIR'S ADMINISTRATION AND THE INDIAN WAR.

THE first government of the Northwest Territory was committed by Congress, in October, 1787, to Arthur St. Clair as governor, and Samuel H. Parsons, John Armstrong, and James W. Varnum as judges, Winthrop Sargent being appointed secretary. Armstrong declined, and in February, 1788, John Cleves Symmes was appointed in his place.

All of them but Symmes had served actively in the army of the Revolution, St. Clair as a major-general, Parsons and Varnum as brigadiers. St. Clair was of a distinguished Scotch family, and came early in life to America as an ensign in Amherst's army. At the close of the French and Indian war he married a lady of Boston, purchased lands in western Pennsylvania, and there made his home. In the hot contentions between the Penns and the Virginia governors for possession of the heads of the Ohio River, St. Clair supported his governor with a degree of ardor so offensive to Dunmore, that the Virginian demanded his dismissal from office. Penn mildly replied

that he could not be spared. From the commencement of the colonial troubles he was equally ardent in the patriot party. At the time he was chosen governor of the Northwest Territory he was President of Congress.

The new governor did not enter the field until the following summer. On the Ohio the situation was thought hopeful, though danger lurked on every side. There were military posts at Pittsburgh, Fort McIntosh, Fort Harmar, Fort Steuben (Falls of the Ohio), and at Vincennes, but all were dependent for their garrisons upon the ten companies of Lieutenant-Colonel Harmar's regiment, which then composed the entire army of the United States. There were villages at various points, chiefly those of Wheeling, Kanawha, and Limestone (Maysville). Thirty thousand people were estimated to have gone to the interior of Kentucky, but how fearfully they were suffering appears from a letter of Judge Innes to the Secretary of War, in 1790, which stated that in the seven previous years fifteen hundred men, women, and children had been slain, or carried captive, by the Indians, and thousands of horses, and fifty thousand dollars of other property, plundered or destroyed.

The country north of the Ohio was, in 1788, a hostile land. There were squatters and villages, but no regular community except the little colony just forming under the guns of Fort Harmar. The Moravians were on the Huron and Cuyahoga

rivers, struggling to regain their lost homes on the Tuscarawas. The French were living in their old villages and farms at Detroit and the posts on the Wabash and Mississippi. But the banks of the Ohio were infested with Indian war parties, determined to hold the river, and filled with implacable hatred of the Americans, especially the Virginians, or Long Knives. They were incited and supported by the officers and emissaries of the British government in Canada, who were equally embittered by the alleged perfidy of the United States in violating the treaty stipulations in favor of the loyalists and British creditors. Upon this pretext Great Britain withheld the posts at Detroit, Sandusky, and the Maumee, and from these vantage-points kept control of the Indian confederation, and of all the Lake Shore from Niagara up to Mackinac.

This was the field of operations to which St. Clair was sent, with his cabinet and legislature of judges. He was also special commissioner to make treaties for peace with the Indians, and therefore was still further embarrassed by the bloody war of retaliation going on between them and the Kentuckians. As to the true balance of right and wrong, Judge Innes' lamentation would be imperfectly understood without at least a glance at the raids which the Kentuckians were making across the Ohio. In the years to which he refers there had been a dozen of these hostile expeditions. They form conspicuous chapters in

the early history of Ohio, but only a rapid survey is possible here.

They began with an incursion by Boone, accompanied by twenty men, to Paint Creek, in 1778, which was suddenly checked by meeting a large force of Canadians and Indians on their way to Kentucky. By a rapid retreat to Boonesborough, Boone and his men made ready and saved it from destruction. In the next year Colonel Bowman attacked and destroyed the old Chillicothe town above Xenia. In the summer of 1780 General Clarke (George Rogers) assembled two regiments under Colonels Logan and Linn, with artillery, at the mouth of the Licking, to attack the Shawanees town on Mad River (near Springfield). Despite the secrecy which they used and their rapid march, the Indians had spied his movement and fled. Their towns were reduced to ashes, their cornfields and gardens laid waste, and the large force returned with this barren result to Kentucky. Immediately after the bloody disaster at the Blue Licks, in 1782, General Clarke and his brigade, under Colonels Floyd and Logan, pursued the Indians and overtook the rear, with their spoils, just as they reached the Mad River towns. Many of them were killed or captured, but they vanished, as before, leaving their fields and cabins to destruction. Colonel Logan was detached to attack the upper town at Piqua, on the Big Miami. This and Loramie's store were both destroyed. This Frenchman and his store were

not at Piqua, as sometimes stated, but on the west fork of the Miami, fifteen or twenty miles above; a noted rendezvous of the hostile savages, and a landmark in the treaties. The quick pursuit and revenge thus inflicted for the defeat at the Blue Licks cowed the Shawanees, so that for a while their great incursions into Kentucky were discontinued. But the murders and robbery by marauding parties, constantly kept up, led to two more expeditions in October, 1786: one under General Clarke to punish the tribes on the Wabash; the other under Colonel Logan, in support of Clarke's movement, which again attacked those at the head of Mad River. These scattered as usual, but Logan pursued them up to the Maca-cheek towns, destroying them and capturing some prisoners. An interesting sketch of this expedition has been left by General William Lytle, who served in it, though but a boy of sixteen years. Two further expeditions were made against the Indians on the Scioto in 1786 and 1790; the former by Colonel Todd, and the latter by General Scott, aided by Colonel Harmar and a party of regular troops, but without any material result. Separate expeditions equally unimportant were conducted by General Scott and Colonel Wilkinson against the Wabash Indians, in the summer of 1791.

These dashes, as they were called, serve to show what a wild and aimless but mutually exasperating method of warfare harried the banks of

the Ohio for many years. They were not merely inconsequential but injurious; provoking constant retaliation, inflicting injury, without conquest or any actual victory over the Indians.

From this exhibition we get a conception of what Governor St. Clair had before him when he landed at the Muskingum, July 9, 1788, saluted by the guns of the fort, and cordially hailed by the village of three months' growth, which, for the present, was the capital of the Northwest. Judges Parsons and Varnum had preceded him. Colonel Sargent, the secretary, arrived on the 15th, bearing the official transcript of the Ordinance, and the commissions of the governor and judges. An assembly of the inhabitants and the garrison was immediately convoked, at which the governor presided, attended by the judges; and these credentials being publicly read and proclaimed, the government of the Northwest Territory, parent of many States, was inaugurated.

The governor's first step was to establish the county of Washington, covering all that portion of the territory which lay east of the Scioto and Cuyahoga rivers. Courts of Common Pleas and Quarter Sessions were formed, with proper judges and officers for each, and for the county. The Court of Common Pleas was opened with great ceremony on the 2d of September, Colonel Ebenezer Sproat, the sheriff, six feet and four inches in height, marching with drawn sword and wand of office at the head of the judges, governor, and

secretary, preceded by a military escort and a number of Indians, to the blockhouse of the Campus Martius, where the temple of justice was first opened in Ohio. On the 9th the judge of the Quarter Sessions, also, was installed. There being no case on the docket of either court, the tribunals were formally adjourned.

St. Clair promptly turned his attention to the treaty for conciliating the Indians. He had already taken measures at Pittsburgh for an early council with them on the Upper Muskingum. This was frustrated by an attack of some vagrant Ottawas and Chippewas upon the military, who were guarding the ground and supplies for the occasion. It was therefore deferred until December. At that time he received, and for some weeks entertained, a concourse of Indians, who, as it afterwards turned out, had no authority from their nations, not a chief or warrior of any note being among them. Brandt and others were confidently expected as delegates from the Six Nations, but turned aside on their way; the wily chief being engaged in a double game, with both sides, British and American. In explanation of this approach and sudden drawing off, there was a popular romance of the time that Brandt aspired to the hand of Louisa St. Clair, the governor's elder daughter, a famous rider and an excellent shot. It was even credited that the feeling was reciprocated, and that the fearless maiden often rode to the trysting in the woods, far from the

fort. But it was mere romance. In a speech by Brandt, in 1794, he explained his conduct by stating that Governor St. Clair, as he had discovered, would not listen to proposals for observing the Ohio River as the boundary ; he therefore would not meet him.

St. Clair's object was to obtain from the Senecas and other tribes on the Ohio the ratification of a boundary supposed to have been gained by cessions of the Mingoes at Fort McIntosh, and of the Shawanees at Fort Finney. He had no difficulty with the rabble assembled at Fort Harmar. As Brandt anticipated, St. Clair showed more of the soldier than the peace commissioner in answering their claim of the Ohio. It had been given up at the late treaties, he told them, by their brethren. By taking sides with England they, as well as their great ally, had forfeited all title. But if they wanted war they should have it. This kind of logic admitted of no further parley. The Indians signed the treaties as dictated to them, and in the language of Major Denny, a witness, "this was the last of the farce." Unhappily it was not the last of the delusion.

The governor had, in the meanwhile, united with the judges in their arduous office as legislators ; as arduous, perhaps, as ever was imposed upon a legislative board. For a country so immense and a people so scattered, their statutes must be such as, virtually, would execute themselves. Very appropriately the first law passed

was "an act to establish and regulate the militia, published at Marietta on the 25th day of July, 1788." A division arose between the governor and the two judges as to some of its provisions, and the question was raised whether the governor, though outvoted, might not exercise his veto power. The governor objected, also, that it was a new law, whereas they only had the power to adopt such laws as were established in some State. The governor on this occasion yielded, and would have been fortunate had he oftener been as moderate. Congress, however, disapproved the opinion of the judges that, in cases of necessity, they might issue new laws.

Ten chapters of territorial laws were published in the course of the year, but as there was neither press nor printer in the territory, they were issued in writing, certified by the governor and judges, and circulated by copies, some of which are extant yet. Those which were issued prior to January 1, 1792, were collected and printed that year at Philadelphia. A second volume of the laws published between July and December, 1792, was printed at Philadelphia in 1794. In 1796 a third volume was printed by William Maxwell at Cincinnati, and hence styled "the Maxwell Code," probably the first book printed in the Northwest Territory. The fourth and last volume of the laws of the governor and judges was printed at Cincinnati in 1798, by Edward Freeman. The laws subsequently enacted by the

territorial assembly made three additional volumes.

While the governor and judges were engaged in their lawmaking, they were joined by Judge Symmes, who arrived at Marietta August 27, 1788, bringing a little fleet of boats, conveying his own and other families of immigrants, destined for his embryo city of Miami, near to Fort Finney and the mouth of the Big Miami. He remained only three days to unite with his colleagues in the laws for establishing the territorial and county courts, being under an engagement to meet Denman, Patterson, and Filson the next month at the founding of their town opposite the mouth of the Licking River.

The succession of the territorial judges, until the admission of Ohio into the Union, was in the following order: Judge Varnum, died in January, 1789. All offices becoming vacant on the accession of the new government under the Constitution, the governor, secretary, and Judges Parsons and Symmes were reappointed, and George Turner in the place of Varnum, in August, 1789. Judge Parsons was drowned in November, while attempting to shoot the rapids of Beaver River in a canoe. Rufus Putnam was appointed in his place, but resigned in December, 1796, on being promoted to the office of surveyor general, Joseph Gilman being named to succeed him. Judge Turner had various difficulties, and resigned. Return Jonathan Meigs, Jr., was appointed to fill

the vacancy, and he, with Judges Symmes and Gilman, constituted the court until the State of Ohio was established.

Governor St. Clair proclaimed Christmas to his people as Thanksgiving day. Having concluded his Indian treaty and set his territory going as far as practicable, he repaired to the city of New York, and with others of Washington's generals joined in the inauguration of their beloved chief as President, in April, 1789. During the entire session of Congress, which continued until October, he was attending upon its committees and the cabinet, aiding and advising in the legislation necessary to adapt the provisions of the Ordinance of 1787 to the new government. Amendatory laws were made which enabled the secretary to act as governor in case of a vacancy or absence. The governor was empowered to call the militia of the states into service, when necessary to protect the frontier settlers. Laws were passed to confirm the French and Canadians, or other settlers, in lands lawfully acquired under the former governments. Full deliberations were had also as to the policy to be pursued by the government in relation to the Indians, a subject much complicated by the unfriendly attitude of the British cabinet and the weak state of the federal finances. Full instructions were given to St. Clair. General Washington added a letter of personal injunction that war with the Indians was to be avoided by every

means consistent with the security of the frontier people and the honor of the country. To this end St. Clair was instructed to ascertain at once, and inform him, whether the Indians of the Wabash and Illinois were for war or peace, and the cause of their hostility. If they were implacable and continued their warfare, St. Clair was authorized to call out fifteen hundred of the Virginia and Pennsylvania militia, either offensively or defensively, as he and Colonel Harmar should determine. He was instructed, also, to carry out the measures directed by Congress for settling land claims on the Wabash and Mississippi.

On this mission Governor St. Clair returned to Marietta, and, after disposing of affairs there, embarked for the Mississippi. He stopped January 2, 1790, at Fort Washington, erected during the previous autumn at the new town (Losantiville) opposite the Licking River. Here the governor spent three days, and met Judge Symmes. On the 4th he established the county of Hamilton, extending from the Ohio River north, between the two Miamis, to a line drawn from "the Standing Stone Forks" (or branch) of the Big Miami due east to the Little Miami. Losantiville now disappeared, being declared by the governor, by virtue of his office, the county seat, by the name of Cincinnati.

Doubtless this was with the assent of Ludlow and the proprietors, but on St. Clair's part it was a heartfelt tribute to the patriot society in

which Washington and his officers signalized their devotion to the noble example of the old Roman. The name given to the county was a tribute, also, to the distinguished soldier and statesman who was next to Washington in the heart of St. Clair.

Passing on to the West, he and the secretary were busily occupied the next six months. In settling the disputed titles, St. Clair's accomplishment in the French language gave him great advantage, as also in explaining the bearing of the anti-slavery clause in the Ordinance, which these people violently denounced. St. Clair defended the clause, and succeeded in allaying their fears by assuring them that it had no retroactive effect. Numbers, notwithstanding, removed across the Mississippi, where the Spaniards promised them immunity from all trouble on that score.

At the same time he was managing through Major Hamtramck, the commandant at Vincennes, an able and most efficient officer, to sound the Indians on the Wabash and Maumee, according to the instructions of the President. A speech of the governor to the tribes, communicating Washington's strong desire of peace, and urging them to come and meet him, was sent out by a trusty messenger. Along with his amicable proffers of peace he unfortunately introduced the phrase used at Fort Harmar, "accept it, or reject it, as you please." This the fiery warriors on the Wabash regarded as a defiance, and drove the messenger back.

Recourse was had to Antoine Gamelin, a French trader, whose long intercourse, honest dealing, good heart, and perfect bonhomie had given him universal popularity among the tribes. Much as they liked him, and always avowing their faith in him, the Indians passed him on from tribe to tribe, with no answer to the speech or invitation until he arrived on the Maumee. Here the chiefs were outspoken. "The Americans," they said, "send us nothing but speeches, and no two are alike. They intend to deceive us. Detroit was the place where the fire was lighted; there is where it ought first to be put out. The English commander is our father since he threw down our French father; we can do nothing without his approbation."

Gamelin returned hopeless, and Hamtramck, in transmitting his report to the governor, added that since Gamelin's return, traders who had arrived brought information that war parties, more numerous than ever, were going to the Ohio. No doubt the new fort, erected between the Miamis, had excited fresh exasperation, and the blow fell with terrible fatality upon the emigrants, who, in false security, were descending the Ohio in large numbers. The ambuscades were never more savage than in the spring of 1790. One party of fifty-four Shawanees and Cherokees, from the Pickaway villages, posted themselves on the north bank of the Ohio, about six miles above the Scioto, in March, and by means of a captured

boat and a decoy of white prisoners created such havoc among the passing boats that all Kentucky was alarmed.

Dropping his business on the Mississippi, St. Clair hastened to Fort Washington, where he met Harmar, July 11, now promoted to the rank of brigadier-general. They concerted an immediate campaign by two expeditions, to march, September 15, against the Miamis, at the head of the Maumee River. One, commanded by Hamtramck, was to move up the Wabash; the other, and larger force, under General Harmar, was to assemble at Fort Washington and march directly north in concert with the other wing. For this purpose fifteen hundred militia were required of the county lieutenants of Virginia (Kentucky) and Pennsylvania, to report and concentrate with Harmar's regular troops at Fort Washington.

The governor's personal diligence and zeal in preparing the expedition will be seen by a mere reference to his itinerary. General Harmar remained at Fort Washington to organize his force. St. Clair made a flying visit to Kentucky, and thence to Pittsburgh, hastening the levies. From there he went to New York to report to the President the failure of his effort with the Indians, and the necessity of the expedition, and to aid the War Office in forwarding the necessary arms and supplies. All this was accomplished in two months, so that on September 23d he was back at Fort Washington to see the expedition started.

There was not force sufficient for the intended movement up the Wabash, but on the 26th General Harmar, with fourteen hundred and fifty-three troops and six pieces of artillery, three hundred and twenty of the troops being regulars, and four companies of the militia mounted, set out on the campaign. This resulted in failure, though by no means defeat.

The Miamis fled as Harmar approached, and their towns at the head of the Maumee were destroyed. This was all that General Knox had ordered, and according to Indian warfare was a success. But the militia colonels were bent upon a fight, and Harmar unwisely yielded. They were defeated, and lost so heavily in two ambuscades, that, though he brought his little army back in good order, the disaster and the discords which broke out between the officers of the regulars and the insubordinate militia inflicted a stigma upon Harmar's reputation, especially in Kentucky, which was fatal to him, though highly unjust.

Another campaign was called for. Congress responded by adding another regiment to the regular army, and authorizing another draft for fifteen hundred militia. But it was limited to six months' men, and the command, owing to the aversion of the Kentuckians to Harmar, was given to Governor St. Clair. For this purpose he was appointed a major-general, and General Richard Butler of Pennsylvania a brigadier, and second

in command, early in 1791. Most ominous, however, were the appointments of Colonel William Duer as chief commissary and contractor, and Samuel Hodgdon, another satellite of the public offices, as chief quartermaster. Colonel Duer's only appearance in the campaign was at the Treasury, where, as Knox, the Secretary of War, wrote to St. Clair, he was in attendance in March, and drew \$70,000, as reported by a committee of Congress.

The dismal details of this campaign need not be recited. Its object was to repair the mistake of General Knox in the Harmar expedition, by establishing a strong military post at the head of the Maumee; and to give full time for this, St. Clair was to have marched from Fort Washington on the 10th of July. But General Butler, who superintended the recruiting and forwarding of the new troops, and Hodgdon, upon whom the equipments and outfit mainly depended, did not arrive at Fort Washington until the 7th of September. Duer did not appear at all. St. Clair, amid these perplexities, was so much harassed and goaded by urgent orders from Knox to go forward, that on the 17th he moved out, as Harmar forewarned him, to almost certain disaster. Another month was lost in building forts Hamilton and Jefferson (the latter six miles south of Greenville). The time of the six months' men began to expire, and, for want of a commissary, the army was nearly out of bread. St. Clair was sick, and

so crippled by gout that he could not mount his horse without help, but, with a resolution worthy of success, pushed on. On the 27th of October a body of his mutinous militia deserted and went back, threatening to help themselves to provisions by plundering the trains in the rear, improvised by St. Clair. Colonel Hamtramck, with the first regiment of regulars, St. Clair's best troops, was sent in pursuit.

Little Turtle, Harmar's antagonist, who was hovering near with a thousand and fifty warriors, now saw his opportunity. On November 3d, late in the evening, St. Clair encamped in the woods, on the banks of a stream which, as he had no guide, he did not know was the Wabash. In the night he was encircled by his foe. At dawn on the 4th, they rushed upon his advanced camp of militia, scattering them like chaff, and then stormed his main camp on all sides. After a hopeless and desperate fight of four hours, eight hundred men (eight hundred and ninety-four, it was said) lay dead within a space of ten acres. The other half fled in confusion.

The horrors of this defeat cannot be depicted, nor the consternation with which the survivors filled the country. On the banks of the Ohio it was felt, literally, that

"The childe may rue that is unborne ;
The pity, it was the more."

There is a plaintive ballad of the time which

long hung on the walls of the log cabins, and serves not only to show the popular grief, but as a specimen of the primitive literature of the West.¹

But now, as often happens, it was "darkest just before day." The savages, in their exultation over these repeated triumphs and spoils, little dreamed that the hour and the man were at hand to settle their doom. Congress again arose to the emergency. The regular army was increased to five thousand men, and means provided for ample supplies. There was a minority, however, who protested that the frontier was not worth the sacrifice of blood and treasure it was costing.

To appease this feeling, Washington resorted again to measures for peace-making. Various embassies were sent out in the summer of 1792. General Rufus Putnam, assisted by the missionary Heckewelder, had a friendly reception on the Wabash. But Colonel Hardin, who was sent to the northwest, and Major Trueman, to Sandusky, with flags of truce, were assassinated. Fifty chiefs of the Six Nations were invited down to Philadelphia to engage them to make a conciliation with the western confederacy. Brandt received the most obsequious attention, as he had at London, also. The great council of the confederacy held their meeting about the 1st of October, at Grand Glaize (Defiance), and were induced by Brandt and the delegates of the Six Nations to agree

¹ See Appendix, No. 3.

they would meet the President's commissioners at the Rapids, "next year when the leaves opened;" but with a distinct notification that no boundary but the Ohio would be admitted.

For this commission Benjamin Lincoln, Beverly Randolph, and Timothy Pickering were appointed in March, 1793. But Washington, acting upon the vote of Congress, had prepared a year before for the other alternative. In place of St. Clair, he had appointed Anthony Wayne major-general of the army, — a soldier whose impetuous valor, near akin to madness, never failed in any emergency, and whose prestige soon restored hope to the panic-stricken West. He would not accept upon the terms which St. Clair had borne. It was a singular coincidence that he avoided St. Clair's mistakes at the Maumee, as well as at Ticonderoga. He would have no six months' men. He required two years for organizing, drilling, and hardening his men, before they took the field. He had special conferences with Washington in relation to the Indian methods of fighting, to determine the tactics for counteracting their desultory, Parthian ways, both in battle, camping, and marching. The result was the formation of the "Legion," a body which, fully completed in its four sub-legions, required five thousand infantry, artillery, and cavalry compacted as one body, and convertible, by quick and simple movements, into line or square, to meet attack on any side. His recruiting officers were instructed to enlist none

but Americans, and special drill in the use of the bayonet and broadsword was enjoined. Stony Point, it will be remembered, had been stormed with unloaded muskets.

During the summer twenty-five hundred men were enlisted and organized at Pittsburgh into companies of horse, foot, and artillery. During the next winter they occupied a temporary encampment at Legionville, twenty miles below Pittsburgh, where they were put through more extended evolutions and drill. In April, 1793, they descended the Ohio to Cincinnati, where the infantry and artillery went into camp at "Hobson's choice." The four companies of cavalry (sorrels, grays, chestnuts, and bays) were sent over to a camp in Kentucky, dubbed by the young troopers with the resounding name of Belleriphontia, where bushwhacking and charging through the woods and broken grounds on the Licking was practiced all the summer.

The converse of all this was taking place on the Maumee. The commissioners had set out in May to meet the Indian council. But their mission was five years too late. The savages had not only become elated, but were rich in spoils taken from Harmar and St. Clair. To reach them the commissioners were under the necessity of accepting the British Governor Simcoe's hospitalities at Navy Hall (Niagara), and there waiting, for weeks, for the British vessel which was to convey them up the lake. In July, Brandt and fifty delegates

from the council appeared there, to inquire whether they had authority to establish a boundary, and to say that the appearances at Fort Washington were warlike. Satisfactory assurances were given on both points; a special express being sent to the President, to repress any hostile measures by General Wayne while the treaty was going on.

The commissioners were then taken to the Detroit River, and lodged at the spacious residence of Elliott, the assistant of McKee, the chief mischief-makers of the British governors, who were then in council with the Indians. Here another deputation came for a more definite answer, whether the commissioners had authority to fix the boundary line at the Ohio River, as established between the Indians and white people in 1768, at Fort Stanwix. The answer to this very categorical demand, probably drawn by Mr. Pickering, was an elaborate review of the whole subject, most able and convincing to white men, but utterly hollow and hopeless to the Indians. The deputies promised an answer the next day, and it was neither peaceful nor flattering. The commissioners were told to go home. Elliott, when the words were interpreted, said they were wrong. Simon Girty, the interpreter, insisted he had given them truly. After explanations they were withdrawn, and the commissioners requested to wait until the council should be consulted.

Twelve days elapsed, during which reports were brought of stormy debates, and that all the nations

but the Shawanees, Wyandots, Miamis, and Delawares (the Ohio tribes) were for peace. But on the 16th came the answer, signed by sixteen nations, adhering to their position, and concluding thus: "Brothers, we shall believe you mean to do us justice if you agree that the Ohio shall remain the boundary between us. This is the great point which we hoped would have been explained before you left your homes, as our message last fall was principally directed to obtain that information."

This was the ultimatum defiantly thrown down by the united confederate tribes; the alliance, it will be remembered, which La Salle and Tonti had set in motion, a hundred and ten years previously, to repel the Iroquois, who now were vainly pleading with them to relinquish the territory then so fiercely asserted by the Iroquois to be theirs. The commissioners retired, and sent expresses at once to warn General Wayne, as well as the President, of their failure.

Whatever doubt there might else have been as to the complicity of the British government with the Indians in demanding this boundary, Governor Simcoe threw off all disguise by proceeding, in April, 1794, as if in anticipation of Wayne's advance, to erect a fort (Miami) at the rapids of the Maumee, at which three companies of the 24th British Infantry formed the garrison. There was strong reason for believing that at this time there was a purpose in the British cabinet to

take back the country northwest of the Ohio, to counterbalance the alleged wrongs of the loyalists and British creditors under the treaty of 1783. Lord Dorchester (Guy Carleton), in a speech to the Indians at Quebec, February 10, 1794, told them that the United States had broken the treaty, and he should not be surprised if Great Britain and the United States were at war that year. "If so, a line must be drawn by the warriors."

General Wayne, on hearing from the commissioners, was deeply impressed with the danger overhanging the frontier, and he took pains that his men should feel it also. They caught his spirit and were eager for the fray. In September, he marched out with the Legion, two thousand six hundred strong, to a point six miles in advance of Fort Jefferson, where he halted, ostensibly for his wagon trains, and for the coming up of a thousand mounted Kentuckians, but in fact for a strategy not divulged. He established at this point a strongly fortified camp (Greenville), and his real design in halting was to assume a menacing position, and before delivering his blow, school his men to the woods and swamps. In this they were constantly exercised. The Kentucky mounted men were kept in equally active practice, guarding the supply trains against the daring attacks between the forts by the Indians. Another of Wayne's vigilant precautions, neglected by St. Clair, was the employment of the most

expert men on the frontier as spies and scouts or rangers ; the latter, about forty in number, under Captain Ephraim Kibby, being on foot, the spies mounted. The spies were a band of six or seven of the most daring border men, some of them brought up among the Indians, and all thoroughly versed in Indian wiles, as well as the Indian language. By their feats and hairbreadth escapes they became the very paladins of early Ohio romance, as may be seen in the pages of McBride and McDonald. McClellan is also immortalized in Washington Irving's "Astoria." Besides scouring the front with these spies and rangers, General Wayne's pioneers were cutting roads in various directions to blind the Indians as to the route by which he meant to advance ; so that it was in doubt to the last whether it would be to the head of the Maumee, to the Rapids, or the middle course down the Auglaize. From this tortuous circling the Indians gave him the name of the Black Snake, but after the battle changed it to the Big Wind (tornado).

The winter and spring thus wore away. In December, however, General Wayne had thrown up a strong stockade fort (Recovery) on St. Clair's battle-ground, with a garrison under Captain Gibson. In June, 1794, as General Wayne did not move, Little Turtle assaulted this fort with a large force of Indians, accompanied, as Wayne believed, by British officers. After two days' struggle they were driven off, with a loss so

heavy that the Indians long deplored it as their worst defeat.

On the 28th of July the Legion and two brigades of mounted men from Kentucky, under General Scott, marched northwest to Fort Recovery, thence turning back to Girty's town, on the St. Mary's, where a stockade fort (Adams) was thrown up in a day. Here Wayne's plan, which was to march down the Auglaize, was betrayed by a deputy quartermaster (Newman), who deserted to the Indians. As to this affair there is an unsolved mystery. It caused a breach between Wayne and Wilkinson, his second in command, which, but for the death of the former, would have become serious. Newman was subsequently captured and put in irons, but released. Some clue to this may be found in an earnest entreaty by the Delawares, at the treaty of Greenville, that Wayne would spare his life.

During a halt of six days at Grand Glaize, Fort Defiance was built, and a flag of truce sent to the Indians, who were concentrated at the Rapids, with an appeal from Wayne that "they should be no longer deceived or led astray by the false promises of bad men, nor shut their ears to this last overture for peace." But that this might afford no pretext for dallying, he crossed the Maumee the next day, and going forward met his flag returning with a shuffling answer. Just below the Rapids, on the morning of August 20, he encountered the Indian lines, extended nearly

two miles from the bank of the river, behind thickets of trees prostrated by a tornado, so that the engagement which followed was called the battle of the "Fallen Timbers;" the British fort being about a mile in their rear. His front line of militia received a hot fire and fell back. The charge was then sounded. The second and third lines (the Legion) advanced; the dragoons on the right penetrating the fastness by a narrow passage at the river, and turning, sword in hand, upon the Indian flank. The front line of the Legion broke through the brushwood, the Indians took to flight before the second line, or the mounted men on the left, came up, and in an hour were driven more than two miles. The gates of the fort were mercilessly shut against them, and they scattered to the woods. The devastation of houses and farms on both sides of the Maumee was kept up for two days, McKee's residence being destroyed among others. Some countermarching close to the fort was also executed, to impress Major Campbell with the danger of his position, but judiciously, perhaps, for both sides, he resented it no further than by a note to Wayne, protesting against the indignity offered to his flag.

So in an hour the pride and power of the Indian confederacy and the scheme of re-annexing the Northwest Territory to the British dominions were broken. It was every way opportune that Mr. Jay, at this time, was negotiating with the

English Ministry for the treaty of 1795. This victory secured the surrender of Detroit, the fort on the Maumee, and all other posts or dependencies within the boundary of 1783.

General Wayne returned to Greenville; first erecting Fort Wayne at the head of the Maumee. Here he left a strong garrison under the command of Colonel Hamtramck; another also at Fort Defiance; thus severing the connection of the Ohio tribes with those of the Northwest, and the dependence of either upon Detroit.

Simcoe, Brandt, and McKee, it was discovered, were soon at work again stirring up war by every art that was possible, either through bribery or threats. The administrative genius of Wayne was now as signally shown in detecting and foiling their plots as in his military measures. The Wyandots were terribly sick. They had lost twelve out of thirteen of their chiefs who were in the late battle. Tarhe (the Crane), the surviving chief at Sandusky, in their isolation saw no hope for them in any more risings. Secretly, through him, General Wayne discovered the new plot, and found means of offering peace to the confederate tribes, if they would accept the boundary proposed in the treaty of Fort Harmar. One by one they acquiesced, and on the 10th of June, 1795, a grand council of delegates from the various nations, headed by chiefs and warriors who never before had met in amity with Americans, gathered at Greenville to treat with Wayne,

now appointed commissioner plenipotentiary of the United States for the occasion.

Little Turtle was at first silent, but listened with close attention to whatever General Wayne said. Evidently there was discord or jealousy between some of the chiefs. At length he opened his grounds of hostility in a speech of sententious force and eloquence on behalf of the Miamis. He was answered by Wayne bravely and generously, and his points were so skillfully unfolded and turned against him as to carry the assembly. Bukongehelas and Blue Jacket, the Shawanees war chiefs, who also had stood off, joined with the majority; Little Turtle was himself convinced; and on the 3d of August, 1795, without a dissent, the treaty of Greenville was signed by Wayne, and ninety chiefs and delegates of twelve tribes.

Perpetual peace and amity were declared. The tribes abjured all other influence and placed themselves under the protection of the United States. All prisoners on both sides were restored. In consideration of \$20,000 in gifts paid down, and annuities of \$9,500 forever, to be paid to these tribes in certain proportions, they yielded to the United States their right to all the territory south and east of the line, then fixed, and ever afterwards known as the Indian boundary. It was not the same, however, as the Fort Harmar line. Like that, it passed up the Cuyahoga and across the Tuscarawas portage to the forks of the

Tuscarawas, near Fort Laurens (Bolivar), and then south of west to Loramie's store; but there, instead of turning north to the Maumee, it bore west by north to Fort Recovery, and thence turned southwestwardly to the Ohio River, opposite to the mouth of the Kentucky, or Cuttawa River. The territory north and west of this boundary was expressly relinquished to the Indians by the United States, except a number of specific tracts which they ceded. The most extensive of these were the posts of Detroit and Mackinac, and all lands in the vicinity of each, which the Indians had granted to the French or English. The cession at the British fort, near the rapids of the Maumee, was twelve miles square, besides another six miles square at the mouth of the river. There were cessions six miles square also at Loramie's, Fort Defiance, Fort Wayne, and on Sandusky "lake," and one of two miles square at the lower rapids of the Sandusky River.

The treaty was a triumph equal to the battle. It was the first great assemblage of the Indian nations face to face in council with the "Thirteen Fires"; and when Wayne in his opening speech held up to them the national emblem of the eagle, and pointed to the arrows clutched in the one talon, and then to the olive branch held forth in the other, the effect was highly impressive. The dignity and heroic manner with which he conducted the proceedings throughout were worthy of the great interests at stake. Many of the

war chiefs, as already suggested, had come to the council sore and haughty, but after a short intercourse with Wayne, these stern warriors could not repress a magnetic response to the grip of the hand, and the soldierly frankness and sympathy which he showed them. This strong personal regard so grew upon them that at parting with General Wayne they assured him that they now understood the treaty, and were so fully convinced that it was wisely and benevolently calculated to promote their interest, that it was their determined purpose to adhere to it. None of the great chiefs or warriors who signed it took up arms afterwards against the United States.

A passage or two from the speeches of Little Turtle may be quoted. As showing the insignificance of the preceding treaties, this extract from his first utterance is material. Addressing General Wayne, he said: —

“ You have shown, and we have seen, your powers to treat with us. I came here for the purpose of hearing from you. We have heard and considered what you have said. I suppose it to be your wish that peace should take place throughout the world. When we hear you say so we will be prepared to answer you. You have told me that the present treaty should be founded upon that of the Muskingum. I beg leave to observe to you that that treaty was effected altogether by the Six Nations, who seduced some of our young men to attend it, together with a few Chippewas, Wyandots, Ottawas, Delawares, and Pattawatomies. I beg

leave to tell you that I (the Miamis) am entirely ignorant of what was done at that treaty."

In another speech he gave his celebrated outline of the extent of the country of the Miamis:—

"General Wayne, you have pointed out to us the boundary line between the Indians and the United States, but I now take the liberty to inform you that that line cuts off from the Indians a large portion of country which has been enjoyed by my forefathers time immemorial, without molestation or dispute. The prints of my ancestors' houses are everywhere to be seen in this portion. I was a little astonished at hearing you, and my brothers, who are now present, telling each other what business you had transacted together heretofore at Muskingum concerning this country. It is well known by all my brothers present that my forefather kindled the first fire at Detroit; from thence he extended his lines to the headwaters of the Scioto; from thence to its mouth; from thence down the Ohio to the mouth of the Wabash, and from thence to Chicago, or Lake Michigan; at this place I (the Miamis) first saw my elder brothers, the Shawanees. I have now informed you of the boundaries of the Miami nation, where the Great Spirit placed my forefather a long time ago, and charged him not to sell or part with his lands, but to preserve them for his posterity. This charge has been handed down to me. I was much surprised to hear my other brothers differed so much from me on this subject; for their conduct would lead one to suppose that the Great Spirit and their forefathers had not given them the same charge that was given to me,

but on the contrary had directed them to sell their lands to any white man who wore a hat, as soon as he should ask it. Now, elder brother, your younger brothers, the Miamis, have pointed out to you their country."

The battle at the rapids of the Maumee opened the land for the Ordinance of 1787. Measured by the forces engaged it was not a great one, nor was that which had been fought on the heights of Quebec. But estimated by the difficulties overcome, and the consequences which followed, both were momentous. To the bold spirit of Pitt, Earl of Chatham, it is due presumably that the people of the Mississippi valley are not to-day Canadian French. Next in honor with the people of the Northwest, as among their founders, might well be placed the lion-hearted Anthony Wayne, who opened the "glorious gates of the Ohio" to the tide of civilization, so long shut off from its hills and valleys.

CHAPTER X.

OHIO BECOMES A STATE.

As the settlers' guide to the Northwest, the Ordinance of 1787 has been compared to the cloud by day and the pillar of fire by night. It might be added that it was by General Wayne, and the treaty of Greenville, that they were brought into the promised land. Till then, the Indians never for a moment relaxed their hold upon the Ohio, so solemnly pledged to them at Fort Stanwix by the king, with the acquiescence of the commissioners of Pennsylvania and Virginia. And never after that treaty, to their honor be it remembered, did the Indian nations violate the limits which it established. It was a grand tribute to General Wayne that no chief or warrior who gave him the hand at Greenville ever again "lifted the hatchet" against the United States. There were malcontents on the Wabash and Lake Michigan, who took sides with Tecumseh and the Prophet in the war of 1812, perhaps for good cause, but the tribes and their chiefs sat still.

It was a year or more before the Western people could believe there was peace. But Indians com-

ing across the line to hunt and trade, as the treaty allowed, assured them of it. "The siren song of peace and agriculture," in the figure of a Kentucky historian, was heard through the land. Plowmen and church-goers no longer carried their rifles. Surveyors might now camp by the fire, and sleep without hiding away from it, a luxury unknown to hunters and trappers aforetime. The vocation of the ranger and scout was gone. After twenty years of this daring life of border warfare, these men, generally poor and little used to farming or traffic, beyond the mere bartering of their peltries, were now to drop into insignificance, or disappear among the newcomers, with their dexterous arts of land-speculating and money-getting. Many of them, however, served with the surveyors and land locators, who now became the important middlemen, and plied the compass and chain in every quarter. Putnam became the surveyor-general, and under his administration nearly all the tract known as the Military Bounty lands was laid out. On the Miami there were Ludlow, Cooper, Schenck, and Galloway; on the Scioto, Massie and McArthur were chief. Their name was legion, and when they took the stand in courts as witnesses, they spoke as the oracles. As seen by the map, more than half of Ohio below the Indian line and east of the Cuyahoga was now opened to emigrants and land sales. In the years 1796-8 a wave of population, farmers, mechanics, traders, clergy, physicians, and lawyers

began to pour in upon the Territory. Emigrants were now made independent of the land jobbers, because at the government sales each could select and purchase his section for himself, at first hand.

A range of towns thus emerged across the country north of the early settlements, showing where the new population gravitated. Earliest were Dayton and Chillicothe, both laid out in 1796. The former had been projected the year before, by Generals Wilkinson, Dayton, and St. Clair, with Israel Ludlow, but settlement was stopped, as in other cases, by the failure of Symmes to complete his title, though the town had actually been laid out.

Through Daniel C. Cooper, who had been employed in their surveys, and had obtained pre-emption rights under the compromise granted by Congress, the families and settlers from Cincinnati, who were in the enterprise, succeeded in securing their foothold, retaining the name of the town in compliment to General Dayton.

Earlier in the year Massie had led a party from his town on the Ohio to the "Station Prairie," on the Scioto, above the mouth of Paint Creek. On this rich and prolific bottom they ploughed and planted three hundred acres in corn. The proprietor and his surveyors at the same time laid out the town of Chillicothe, just above, stretching across the beautiful valley curving between the Scioto and Paint Creek. The word

seems to have signified in the Indian tongue a town, and there were several of that name. By its position on the west bank of the Scioto, at the heart of the Virginia military district, this soon became the nucleus of the Virginians, who chiefly held the lands. Its influence upon the affairs of the Territory will be seen.

Chillicothe, like Dayton, had been projected a year earlier. A number of respectable people of the counties of Mason and Bourbon, in Kentucky, were disposed to remove, from their dislike of negro slavery. Among these were the Rev. Robert W. Finley, Captain Petty, and James Manary. While moving under an arrangement with General Massie (who afterwards acquired this title), a party of sixty, in crossing the country from Limestone to the Scioto, in the spring of 1795, encountered an Indian encampment on Paint Creek. The Indians were attacked, and fled. The whites fell back, but early the next morning were attacked in turn. They repulsed the Indians and returned to Kentucky.

Ordinarily this would have passed without notice. It happened, however, that General Wayne just at the time was anxiously drawing together the great assemblage at Greenville, and the Indians were startled by a suspicion of treachery. Wayne wrote in great indignation to Governor St. Clair, reflecting somewhat upon his government, and was very caustic upon "Parson Finley" and Massie. The worst of it was that this band, sixty

or seventy Shawanees under Pucksekaw, one of the chiefs, started on a raid to the Ohio and Western Virginia. Wayne succeeded in pacifying the Shawanees at Greenville, and they sent Blue Jacket in pursuit. Pucksekaw and the marauders were brought back, in great contrition. The chief's apology to Wayne was that he had been in the woods some months, and was wholly unacquainted with the good work going on at Greenville; but he insisted that his camp at the Scioto had been robbed when they were peaceably hunting.

1795
This was the last of the Indian war in Ohio. The last reported buffalo was killed on the Hockhocking in the same year. On the 24th of October, the first public sale of lands by the government was made at Pittsburgh. These were in the seven ranges, the surveys of the military lands, extending across the middle of Ohio from the seven ranges to the Scioto, not being yet completed. Notwithstanding the attractive offers of land now opened in the Miami purchase and Virginia district, the sales in the seven ranges at Pittsburgh and New York footed up 200,806 acres. This indicates the activity with which "movers" were setting towards the Ohio.

The important event of the year was the evacuation of the posts, and final surrender by England of Michigan and the Maumee and Sandusky valleys. By the Jay treaty, this should have occurred on the 1st of June, but the furious con-

test over the treaty in Congress delayed it, though the British authorities and officers were ready to comply. Colonel Hamtramck and the United States troops entered Detroit July 11th, 1795, and northwestern Ohio for the first time came under the flag. General Wayne transferred his headquarters there in the next month. Governor St. Clair being absent from the Territory, Colonel Sargent met General Wayne, as vice-governor. The county of Wayne, with appropriate courts and officers, was established, embracing Michigan and all northwestern Ohio, and all proper measures were taken for indoctrinating the French in their new institutions. For a while the effort had a serio-comic character, but gradually the *habitans* acquired all the style and arts of accomplished republicans.

Governor St. Clair, in 1795, had written to the secretary, "There is not a road in the country." It would seem that the numerous military expeditions must have left broad tracks between Cincinnati and Mad River on one route, and out to the Maumee on others. The earliest, perhaps, of "internal improvements" by the United States was the road for the mail route from Wheeling to Limestone. For this and the necessary ferries the President was authorized by Congress in May, 1796, to enter into contract with Ebenezer Zane, of Wheeling. His compensation was to be three sections of land on the route: one at the Muskingum, one at the "Standing Rock" on the Hock-

hocking, and one opposite Chillicothe on the Scioto. This road, known as "Zane's trace," was committed by him to his brother Jonathan and his son-in-law John McIntire, and consisted at first of a bridle path, cut through the woods and winding around the stumps. In a few years corduroy bridges (saplings laid crosswise) were put in at marshy places. The stately road wagon then followed, with its teams of four and six horses, tinkling bells mounted on their collars, the connecting link for inland commerce between the packhorse and railway car. After this came the mail stage; this road, for forty years, being the great mail route between Washington and Kentucky.

At the Muskingum, Zane and McIntire established Zanesville in 1799, and New Lancaster in 1800, at the Hockhocking. This town owed its name to the thrifty emigrants from the old Pennsylvania County, who first settled Fairfield. Many of the same stock founded the agricultural counties eastward of Fairfield. Their broad mark of well tilled farms is to be seen all across the middle of Ohio, reaching to the rich valley of the Miamis.

The government of the Territory received a new accession, in 1797, from the appointment of Captain William Henry Harrison as secretary, Colonel Sargent being appointed governor of Mississippi Territory. Captain Harrison had been left in command of Fort Washington by General

Wayne, and now resigned his commission in the army. During this year, also, the counties of Adams and Jefferson, and in the next year the county of Ross, were established by the governor.

A census of the Territory, taken in 1798, established the fact that there was a population of five thousand free white male inhabitants, of full age. It was entitled, therefore, to enter upon the second stage of government prescribed in the Ordinance. An election of representatives by counties was ordered by the governor's proclamation and writ, in the proportion of one for every five hundred of the population. This census is not accessible, but we may estimate what it was by the number of representatives allotted. Washington County (the Muskingum) had two; Hamilton (the Miamis), seven; Ross (the Scioto), four; Adams (Virginia military district), two; Jefferson (Upper Ohio), one; Wayne (Detroit), three; St. Clair and Randolph (Illinois), and Knox (Indiana), each of them one. New Connecticut, as the Western Reserve was styled by St. Clair, had no delegate, and at this time he knew but one man in the district.

A meeting of the representatives elect at Cincinnati, February 4, 1799, nominated ten persons, from whom five were appointed by the President to compose the legislative council. These were Jacob Burnet and James Findlay of Hamilton County, Robert Oliver of Washington, David Vance of Jefferson, and Henry Vanderburgh of

Knox. The assembly, consisting of the governor and the two bodies thus chosen, was convened at Cincinnati, September 23. This transfer of the seat of government to Cincinnati was made by the governor, without any formal law on the subject. He had also adopted a territorial seal, which subsequently aroused some controversy. The device was apparently a buckeye-tree, as the antiquarians contended; the foreground being another tree, felled and cut into logs. The motto, *Meliorē lapsa locavit*, signified literally he "planted one better than the fallen." The device, it was insisted, clearly explained why the appellation of Buckeyes and the Buckeye State had been given to Ohio and her people. Cynics, however, who despised the buckeye, regarded the motto as proof that it must be an apple-tree.

This first assembly of the Territory is an object of interest as the beginning of a great fruitage. Though an improvisation, and containing many men unacquainted with the forms or technical requirements of legislation, its members were the strongest and best men of the Territory, thoroughly awake to its condition and wants. What was singular in the political agitation then raging at the east, party division and influence here were scarcely perceptible. Several members were men of a high order of talent, and became eminent in the councils of the nation and state. Jacob Burnet of the council was a lawyer of learning and ability, the chief adviser and sup-

port of the territorial administration, and afterwards a judge of the supreme court of Ohio, and senator of the United States. His "Notes of the Northwest" is an invaluable historical legacy, without which St. Clair's administration and the early settlement of Ohio would hardly be intelligible. Among the representatives were McMillan and Fearing, able lawyers, who afterwards represented the Territory in Congress; Tiffin, Worthington, and Smith, who became senators in Congress, the two former governors of Ohio also; and Massie and Sibley, leaders in forming the states of Ohio and Michigan.

Governor St. Clair met the council and representatives in joint assembly on the 25th. The ceremonial equalled an opening of Parliament. His speech was a clear statement of the condition of the Territory, and of the objects which would demand their attention. Separate responses were made by the two bodies, couched in the most appropriate form and phrase. To each of these the governor replied with equal felicity. The assembly devoted themselves for three months to the matters brought before them, but as these were chiefly of temporary concern they need not be recalled. William Henry Harrison was sent as delegate to Congress. It is quite noteworthy, in reference to Mr. Jefferson's anti-slavery proposition, that on the fourth day of the session a committee, to which a petition of officers of the Virginia line for "toleration to bring their slaves

into the Virginia Military District," had been referred, brought in a report that it would be incompatible with the Ordinance, and it was unanimously adopted. Notwithstanding this decisive action, another petition was received from Thomas Posey, and other officers and soldiers of the Virginia line, urging that persons from states in which they require that species of property might be permitted to bring their slaves into the Territory with them, under certain restrictions. But the assembly was inexorable. Bills were passed, also, by which some of the counties were divided and new counties created.

At the conclusion of the session, December 19th, they were again met by the governor, and "prorogued" until the next year, with the same formality as at the opening. But he reserved until this occasion the announcement that he disapproved of eight or ten of their bills. Among them were those relating to new counties. As to these, besides other reasons for the veto, they were very plainly told that this was the proper business of the executive, and not theirs. The ambiguity in the Ordinance, upon which this turned, has been pointed out. These measures, therefore, were shelved for a year, and some of the members went home sorely aggrieved. So many persons, in and out of the assembly, were engaged in laying out towns for county seats, that the disappointment excited great rankling. General Massie was doubly defeated, as he had

previously attempted to steal a march on the governor by applying to the Court of Common Pleas to remove the county seat of Adams to his town of Manchester.

But all acrimony was hushed for a time in the universal grief at the death of Washington, which occurred at the close of the year and of the century. To no one was it more afflicting than Governor St. Clair. At Cincinnati the event was observed by most solemn funeral honors. The "Western Spy" of February 5th describes the scene as one never before witnessed by the people. A funeral procession of the military companies of the town and the garrison moved from the fort, followed by the officiating clergyman, pall-bearers supporting a bier and coffin; a horse, representing that of the deceased hero, with saddle, holsters, and boots reversed; Governor St. Clair and the attorney general as mourners; the Masonic brethren, militia officers in uniform, and citizens. The cortége moved through the streets to the burial-ground, where the coffin was formally interred with prayer, Masonic ceremonies, and musketry. This extraordinary memorial was finished with a short but most impressive address by the governor.

The contention which soon ensued went far deeper than the question as to new counties, or the arbitrary use of the veto. It resulted in a discord which was fatal to Governor St. Clair. The charges and counter-charges of the parties

to the quarrel are disclosed in part by Judge Burnet. The more closely the dispute is examined, the more nearly will the responsibility, if not the origin of it, be traced to St. Clair.

He was ardently devoted to General Washington, and to his administration and successor. So, in fact, were most of the leading men in the Territory. The old army influence was strong. St. Clair made no disguise of his attachment to the Federal party, as the one most identified with the Constitution and the Union. He gloried, therefore, in being a Federalist as contradistinguished from those who still pinned their political faith to the Articles of Confederation, and the new tenets and vocabulary of French democracy. Withal, he retained most friendly and social relations with the leading men of this opposition. But his confidence and chief correspondence were with those who supported the administration, and to this cause he regarded himself as in duty bound to guide the administration of the Northwest Territory. One with whom he constantly counseled was James Ross, the distinguished senator of his own state, by whom, it is just to say, the interests of the Northwest were always cherished.

In a letter to this gentleman, soon after the assembly had adjourned, St. Clair wrote that he had been "obliged to put a negative upon a good many of their acts, but that the session had passed off harmoniously, and their last act had been a very handsome address to the President"

(Adams). After alluding to matters which might come before Congress, he recalls a subject on which they had already conferred, of dividing the Territory into districts and erecting two governments. As to the expense, which Mr. Ross had suggested as an objection, St. Clair argued it was nothing compared with the inconveniences of its becoming a state, "and if it is not divided," he said, "it must become a state very soon." Taking Kentucky as an example, he pointed out the evils which would result. "All this might be prevented by the division of the Territory." To answer the purpose, however, the division must be such as to "keep them in a colonial state for a good many years." In a letter to the Secretary of State (Pickering), which he said he had just sent, he had indicated the proper boundaries, but now, on reflection, thought it would not answer. For while it would make the eastern state surely Federal, "its population was so thin that the design would be evident." He therefore suggested a line drawn north from the mouth of Eagle Creek (Brown County) as better, as the western district, if divided by the Big Miami, must return to the first stage. The people of Ross County desired the line of the Big Miami, and he believed that Colonel Worthington had gone to Philadelphia for that object. They looked to a new state, and as almost all were Democrats they expected to have the power and influence.

In a subsequent letter to Harrison, February

17, 1800, urging the division as "a thing on which I have thought a great deal, and have fervently wished," he asserted that "the most eligible division is by the Scioto, and a line drawn north from its forks. The eastern division would then have its seat of government at Marietta. Cincinnati would thus continue to be the seat of government of the middle district, and Vincennes become that of the western."

These are the earliest disclosures of a design to divide the Territory, and, as will be seen, were subversive of the plan fixed in the Ordinance. Why Colonel Worthington had gone to Philadelphia, and whether the people of Ross County were yet awake to the huge design thus imputed to them, might appear if Worthington's papers were not lost. The notion that he was applying to a Congress and President of Federalists to establish a democratic state, wears an air of idealism and romance of which he was not suspected. St. Clair's letter to Pickering had been seen by Harrison, and made known. This and the other causes of variance excited an intense animosity against the governor, particularly in Ross and Adams counties, in which the Virginia influence prevailed, and at which St. Clair's scheme was chiefly aimed.

Very soon, and in a manner almost accidental, the question as to a division was brought into Congress. After a stubborn conflict between Harrison and his supporters in the House, and

the friends of St. Clair in the Senate, an act was passed in May, 1800, dividing the Territory, by the Greenville treaty line, from the Ohio up to Fort Recovery, and thence directly north through Michigan. All eastward of this boundary continued to be the Northwest Territory. The country westward was established as the Indiana Territory, but in all other respects was governed by the Ordinance. The act emphasized, as though it were the point of conflict, that this should in no wise be construed to affect the original provision in the Ordinance that the line due north from the Big Miami River should remain permanently fixed as the western boundary of the eastern state, whenever erected. A further provision that Chillicothe and Vincennes should be the seats of government of the respective districts, until otherwise ordered by the legislature of each, aroused a vehement outcry of St. Clair's friends, especially at Cincinnati, as being an infringement upon the legislative authority vested by the Ordinance in the assembly. This was but one of the shifts to which the governor's party were driven. If Congress might divide the Territory, it was no great stretch of the law to change the seat of government; and the less so as it had never been fixed by law, nor otherwise than at the governor's pleasure.

At the opening of the next session of the assembly at Chillicothe, November 5, the embittered relations of the governor and the opposing

party were painfully exposed by the terms of his speech. His term of office, he said in concluding, was soon to expire, and it was uncertain if he should meet another assembly, as he well knew that the vilest calumnies and grossest falsehoods were assiduously circulated. Notwithstanding the baseness and malevolence of the authors, he could conscientiously declare that no man could labor for the good of the people of the Territory more assiduously than he had. No act of his administration had had any other motive than to promote their welfare and happiness. This was assuming the whole point, and did little to allay the malcontents. In answering the speech, the council mingled their compliments to the governor with strong indignation at his traducers. The representatives were not so effusive.

A joint committee was appointed by the two bodies to address a gentle remonstrance to his Excellency as to the exclusive authority which he asserted of establishing new counties. It was intimated that the assembly found no reason to change their views. It was also suggested that bills not approved might be returned before the session was closed, so that objections might be obviated. But the governor remained headstrong on the county question, and treated the other suggestion with some disdain. It seemed to regard his action, he said, somewhat in the light of a mere qualified dissent, whereas by the Ordinance

he was a third branch of the assembly, and his negative as absolute as theirs. But if they should see proper to apply to Congress for a change of the law, he would cheerfully unite in it. This was so much like cavilling as to add to the disaffection. To make matters worse, the governor suddenly put an end to the session on November 9, when the legislature was in the midst of its business. The ground ostensibly was, that, as his term of office expired that day, the assembly could not proceed, the law not authorizing the secretary, in this emergency, to act as vice-governor. The true reason, as alleged, was that the secretary (Charles W. Byrd) was suspected of being in sympathy with the opposition. A biographer of St. Clair describes this as "an evidence of political sagacity and courage." Judge Burnet, though a strong partisan, admits that "St. Clair's best friends were apprehensive that the motive of excluding the secretary had an improper influence on his mind." It was certainly unfortunate, as he was soon renominated by the President and confirmed by the Senate.

Under an important amendment, which Captain Harrison procured during his short service in Congress for the sale of the military bounty lands in half sections, the influx of population grew larger than ever. This law also admitted of sales upon credit, but in this respect was less fortunate. Harrison exerted himself also to secure the relief at this time granted to the people

who had lost their titles by the failure of his father-in-law, Judge Symmes. By another act of grace, in the same year, the holders of the Connecticut title for the Western Reserve lands were brought out of tribulation. The general want of confidence in the title was retarding the growth of the country. Though Congress had been tender with Connecticut, as with all the state pretensions of title to the western lands, it was felt that the United States might at any time assert a paramount right. At the time that Congress was dealing so liberally with the sufferers in the Miami purchase, a law to provide for "quieting the title of persons claiming as grantees or purchasers, under the State of Connecticut, the tract commonly called the Western Reserve," authorized the President to execute a patent to the governor of Connecticut for their use and benefit, provided that state should within eight months renounce forever all claims of territory and jurisdiction westward of the east line of the state of New York, saving the claim thus quieted. Connecticut, through Governor Trumbull, executed the renunciation May 30, 1800, and the President, by patent, conferred the title of the United States upon all lands in the Western Reserve. Thus the belt of one degree and five minutes in width, along the forty-first parallel clear to the "South Sea," forever had rest.

Governor St. Clair on the 10th of July very

appropriately established the entire Reserve as a county, under the name of Trumbull. In December he established the counties of Clermont and Fairfield, and in September, 1801, Belmont, thus completing the nine counties which formed the basis of the State of Ohio. The military bounty lands between the Reserve and the north line of the Seven Ranges and of the Ohio Company's purchase, stretching across from Pennsylvania to the Scioto, brought in a large immigration of Pennsylvania Germans. A strong element of the Scotch-Irish, from the same quarter, also entered this middle belt, and was gradually diffused through the state.

The third assembly, or properly the first session of the second assembly, met at Chillicothe November 25th, and with it came the turning point in the struggle of St. Clair and the Federalists to set aside the plan of the Ordinance for new states. The assembly was favorable to the governor, notwithstanding the partial disaffection. The council remained as it was, except that Solomon Sibley of Detroit had been appointed to succeed Vanderburgh, transferred to Indiana. A few changes had occurred among the representatives, chiefly among the members from new counties. Jeremiah Morrow and Francis Dunlevy, from Hamilton County, were the most conspicuous. But notwithstanding the total overthrow of the Federalists in the late elections of President and Congress, the people of the North-

west Territory seem in the main to have been unmoved. A considerable majority of the representatives in the new assembly were either of that party, or so well inclined to the governor as to be practically the same.

The assembly met just as the first session of Congress, under Mr. Jefferson's administration, was commencing its session, and in view of its composition, as all was quiet in the Territory, the policy of Governor St. Clair and his friends should have been to keep it so. An unusual amount of interesting business was in hand. Cincinnati, Chillicothe, and Detroit were incorporated. The "American Western University" at Athens was established. Important instructions to Mr. Fearing, the delegate in Congress, were on foot. All at once the affairs of the Territory were brought to a crisis by two measures. One was a bill declaring the assent of the Territory to a change in the boundaries of the states to be formed under the Ordinance of 1787; the other, to remove the seat of government and fix it at Cincinnati. In the first of these bills the division established by the Ordinance was declared to be "inconvenient and injurious, as the eastern state (Ohio) in particular would be too extensive for the purposes of internal government." It was proposed, therefore, that the eastern state should be bounded east by Pennsylvania, and west by the Scioto River up to the Indian boundary, and thence by a line drawn to the west

corner of the Connecticut Reserve, and with it to the lake; the middle state to extend along the Ohio from the Scioto to the falls of the Ohio, and its western boundary to be a line from there to the Chicago River; the western state to occupy the country between that line and the Mississippi.

This bill was introduced into the council by Mr. Burnet on the 3d of December, and passed unanimously the same day. In the other chamber it met a determined resistance, but was passed by a vote of twelve representatives against eight. The bill transferring the seat of government to Cincinnati was passed with some change of votes, but by the same majority. Both were approved by the governor, and a transcript of the former was immediately transmitted by him to Mr. Fear-
ing, to be presented to Congress.

The indignation at Chillicothe resulted in a disgraceful mob, which under the leadership of Baldwin, a popular demagogue and most intemperate enemy of the governor, attempted to force their way into his lodgings, but were driven off by the bravery of Major Scheiffelein, a member from Detroit, and others who came to the rescue. That the insult had no countenance from the opponents of the governor in the assembly is made plain by his own statement, twice repeated, that "Baldwin was not prevented from it but by the splendid exertion of Mr. Worthington, who was obliged to go so far as to threaten him with

death." Worthington was the most earnest and strenuous, perhaps, of the governor's opponents.

This movement to disturb the plan of the Ordinance and restrict the eastern state to the narrow limits between the Scioto and the Pennsylvania line, was so manifestly a blunder as well as wrong, that it produced a revulsion of feeling fatal to Governor St. Clair. He denied any cognizance of the bill prior to its introduction, but unquestionably it bears the marks of his letters two years before. Among the charges presented to the President, when his removal was sought, it was alleged that "the late effort to alter the bounds of the states in the Territory originated with the governor, and has been supported by his influence in all stages." Justly or unjustly, he was held responsible for it, and never recovered from the storm of obloquy which now fell upon him. The minority in the House of Assembly entered a protest on the journal. Meetings to remonstrate were held. A committee of correspondence was established. Printed petitions and remonstrances to Congress against the change were sent broadcast through the Territory for signatures. Worthington was dispatched to Washington with credentials from his colleagues, and Baldwin sent with him by the citizens' committee, to oppose the act passed by the assembly, which Mr. Fearing on the 20th of January, 1802, had presented to Congress.

Judge Burnet's comments on this rupture are

the shortest and least communicative in his "Notes." "The friends of the change admitted," he said, "that it would retard the establishment of a new state, an object of great weight with Mr. Jefferson's party. His close election, in the late contest with Burr, made the vote of another state desirable. But the assembly argued that the delay would have beneficial tendencies." What these were to be, may in part be inferred from St. Clair's letters to Ross and Pickering. But the opposition had not been slow in detecting that the object was to continue the colonial period, for party purposes, to the general detriment. Those in Ross and Adams counties also saw that, while the new plan might be very well for Marietta and Cincinnati, it placed the Scioto and Chillicothe on the outer edge of both districts. Both parties were alike, perhaps, in their motives, but at this day no one doubts which was right, on the merits. It is manifest that the state bounded by the Scioto would have been a stupendous blunder. The opponents of such a measure had little difficulty in scoring a double victory, first with Congress and then with the popular vote.

Worthington quickly discovered at Washington that the assembly would not only be overruled, but that the majority in Congress would go further, if the Territory was ready. His coadjutors and the committee at Chillicothe were "pleased to hear of our assuming an independent form of government, and requested and instructed him to exert his

influence with Congress to effect so desirable an event ; an event which, terminating the influence of tyranny, will meliorate the circumstances of thousands by freeing them from the domination of a despotic chief." Worthington was instructed to effect the calling of a convention, and submit it entirely to Congress to direct the time, place, and purposes. This was the sort of spirit which St. Clair, unhappily for himself, had raised in the Territory.

The House of Representatives in Congress, by a vote of eighty-one against five, rejected the act of the assembly, evidence enough how offensive it was. Dr. Cutler, singularly, was one of the five for marring the Ordinance. Under the lead of Mr. Jefferson's next friends, Messrs. Breckenridge in the Senate and Giles in the House, an Act of Congress, April 30, 1802, authorized a convention of delegates to be elected in September by the votes of that part of the Northwest Territory bounded east by Pennsylvania, south by the Ohio River, west by a line drawn from the mouth of the Big Miami River due north to an east and west line passing through the south extremity of Lake Michigan, and by this line and the Canada line through Lake Erie to the west line of Pennsylvania. This, it will be seen, omitted Michigan ; and as the Federalists were the majority in Michigan, it was denounced as a political fraud. But the Ordinance plainly contemplated it.

The convention was required to meet Novem-

ber 1st at Chillicothe, and thereupon determine, first, whether it was expedient to establish a state government. If decided by a majority to be expedient, the convention was authorized to proceed in adopting a constitution and forming a state government, or it might call another convention for that purpose. This constitution and form of government were to be republican, and in conformity with the compact of 1787, and the state, until the next census, was to have one representative in Congress.

A condition of peculiar form was annexed. If the convention would provide, in a manner irrevocable except by the consent of Congress, that all public lands in the new state should be exempt from all tax for five years after they should be sold, Congress offered to give it section sixteen in every township for schools; also all the reservations of salt springs; and, besides all this, one twentieth of the net proceeds of all sales of public lands in the state, to be applied by Congress in making roads between tide-water and the Ohio River and in the state.

There was a vigorous contest, and some bitterness, between the parties in the Territory, at the election of delegates; the issue being state or no state. The enabling act was denounced as a violation of the Ordinance. The exclusion of Michigan was assailed, especially, as unconstitutional and oppressive. The exemption of the public lands from tax was derided as a humiliating condition,

and an insult to the equality professed to be held out. These were the points made by the opposition. How idle they were appears by the Ordinance, which provided against every one of the objections.

The result of the election was that St. Clair's policy was strongly resented by the people of the Territory. When the convention assembled and the question was put, thirty-four out of the thirty-five members voted to proceed at once to form a constitution and state government; the sole vote in the negative being that of Ephraim Cutler of Marietta. Fourteen, however, opposed a motion that "Arthur St. Clair, Esq., be permitted to address the convention on those points he deems proper." The speech was another unhappy mistake, for it inveighed against the Act of Congress before men who had been moving heaven and earth to bring it about. It was denounced as "an interference by Congress in the internal affairs of the country, such as they had neither the power nor the right to make, not binding on the people, and in truth a nullity." With much more of this contemptuous language, the convention was called upon to set Congress at defiance.

The address was deemed "sensible and conciliating" by Judge Burnet. The President, to St. Clair's misfortune, took a different view of it, and on the 22d dismissed him from office "for the disorganizing spirit, and tendency of very evil example, grossly violating the rules of conduct enjoined

by his public station, as displayed in his address to the convention."

So ended the public career of Arthur St. Clair. The rest of his life was embittered by an unrelenting persecution, which, not satisfied with his humiliation, reduced him to stark poverty by denying him any compensation for money which he had advanced for the public service in its utmost need.

The ingratitude shown by the country was most unjust. Granting St. Clair's faults, granting that he erred grievously as to his powers, and in the attempt which he made to break the arrangement for new states so wisely drawn in the Ordinance, and that on some occasions he was obstinate in withstanding reason and argument, all this was, as he himself confessed, due to error of temper and judgment, and never to a corrupt or dishonorable purpose. He sinned like thousands of men to-day, who take office without being equal to the duties involved, but he was not an unprincipled tyrant, as his enemies habitually represented. He believed conscientiously that he was serving the interests of the country. By his military training he had acquired the high spirit which British officers at that period carried to a fault, so that in civil affairs in the backwoods his manner seemed imperious and arrogant. Underneath he bore a gentle, generous, and brave heart. His fidelity and devotion to Washington in all the dark intrigues and perils of the Revolution proved it.

But with the pertinacity of his race, which clings to its opinions, he unfortunately cherished a conceit that he was learned in the law. Before committing the mistake which lost him his office, he had on one occasion withstood an opinion of the attorney-general. There was a misconception on the part of St. Clair and his friends as to the authority of Congress. It was not so well settled then as now, that its jurisdiction over the territories is supreme, as supreme as that of a state over its counties, if not more so.

On the 29th of November the constitution was adopted by the unanimous vote of the convention, and this by the enabling act was final, and did not require a reference to the popular vote. In presence of the popular manifestations, both before and after this vote, it is idle to contend that the people of the Territory were averse to it. Worthington was appointed an agent of the state, with instructions to return to Washington and secure the measures necessary for consummating the work which he and his colleagues had so successfully begun.

The instrument so adopted, it would be respectful to pass in silence. It was framed by men of little experience in matters of state, and under circumstances unfavorable to much forecast. With such a model of simplicity and strength before them as the national constitution, which had just been formed, the wonder is that some of its ideas were not borrowed. It seems to have been

studiously disregarded ; and Ohio, as well as some states further westward, which her emigrant sons with filial regard induced to adopt her example, has suffered ever since from a weak form of government made up in haste, and apparently in mortal dread of Governor St. Clair. He declined to be a candidate for the office of governor, but unluckily not until the convention had adjourned. In after-years Ohio's greatest and wittiest governor was wont to say, that, after passing the first week of his administration with nothing to do, he had taken an inquest of the office, and found that relieving criminals and appointing notaries were the sole "flowers of the prerogative."

Briefly stated, it was a government which had no executive, a half-starved, short-lived judiciary, and a lop-sided legislature. This department, overloaded with the appointing power which had been taken away from the executive, became so much depraved in the traffic of offices, that, in an assembly where there was a tie vote between the Democrats and the Whigs, two "Free Soilers" held the balance of power, and were permitted to choose a United States senator, in consideration of giving their votes, for every other appointment, to the party which aided them in this supreme exploit of jobbery. A new constitution put an end to this, but the shadow of St. Clair still predominates.

One occurrence in the convention deserves notice. In the terms for the qualification of voters,

as at first adopted, the right of suffrage had been conferred upon negroes and mulattoes. But on a revision, a motion to strike this out was carried only by the casting vote of the president, — a strange prelude to the rigorous “black laws” soon afterwards adopted by the legislature.

The effect of the enabling act was that the people of Ohio, by the adoption of the constitution, became a body politic. But being without a government they were not yet a state, nor were they yet accepted or admitted into the Union. This the new constitution itself recognized. It acknowledged expressly that the territorial government should continue until the new government should be formed. For this purpose it was ordained that an election of the governor, members of the legislature, sheriffs and coroners, under the constitution, should be held January 11, 1803, and that the legislature should commence its first session on the 1st of March at Chillicothe, as the capital.

At Washington, the speaker, on December 23, laid before the House of Representatives a letter of Thomas Worthington, as “agent of the convention of the State of Ohio,” communicating for the approval of Congress the constitution, and the consent of the convention, with certain amendments, to the condition which Congress had proposed, which papers were referred to a special committee. Before they reported, a question was raised whether Mr. Fearing was any longer entitled to his seat as delegate for the

Territory. On the 31st of January the House decided that he still held his place. Two days afterwards resolutions were reported by the special committee, consenting to certain additional donations proposed by the convention. This was formulated in a bill, and passed by an Act of Congress, March 3, 1803.

The Senate also had taken up the subject by a bill introduced January 5, to "provide for giving effect to the laws of the United States within the State of Ohio." A communication was presented from Worthington on the 7th, as agent, enclosing a copy of the state constitution. A committee was directed to report what legislative measures, if any, were necessary for admitting the State of Ohio into the Union, and extending the laws of the United States over the state. The bill reported by this committee, after reciting that a constitution and state government had been formed by the people pursuant to the enabling act passed by Congress, and that they had given it the name of the State of Ohio, ordained that it be established as a judicial district of the United States; that a district court be organized, and hold its term on the first Monday in June, at Chillicothe; and that the laws of the United States should be of the same force and effect in the said state as elsewhere in the United States. This bill was passed by Congress February 19.

Here, then, were two acts of Congress recognizing the State of Ohio, but no state yet estab-

lished which could accept or act upon them ; and the constitution expressly recognizing the territorial government as in force until the state government should be established. The elections were held January 11th. The first general assembly met at Chillicothe on the 1st of March. Upon organizing and canvassing the votes for governor, Edward Tiffin was declared to be elected. In the course of the session Return Jonathan Meigs, Jr., Samuel Huntington, and William Sprigg were appointed judges of the Supreme Court. Thomas Worthington and John Smith were chosen as senators to Congress, and an act passed for holding an election of a representative to Congress, on June 11th. Jeremiah Morrow was elected. But Congress had adjourned on the 3d of March, and the senators and representatives of Ohio were not actually admitted until the next session.

As there was no formal act of admission by Congress, much dispute has arisen as to the time when Ohio was admitted as one of the United States, the various hypotheses ranging all along from the date of the enabling act, April 30, 1802, to the actual seating of her senators and representatives in Congress, October 17, 1803. It is quite clear that the enabling act did not form the state. It is also certain that the inchoate state which was framed by the convention was postponed, by its express submission to the territorial government, until the state government could be formed and set in operation. The earliest day at

which this can be said to have occurred was at the meeting of the legislature on the first day of March. The law-making power being the repository and paramount representative of the power and sovereignty of the state, the territorial government on that day ceased, and Ohio became a state in the Union.

This was the view of the question subsequently adopted by Congress. In March, 1804, Judge Meigs, for himself and his associates of the territorial court, presented a petition stating that they had continued to exercise their duties until April 15, 1803, and had applied at the Treasury for payment of their salaries accordingly. The accounting officers, on the advice of the attorney-general, had refused to allow it beyond November 29, 1802, the day on which the state constitution and form of government had been adopted. The judges had thereupon applied to the legislature of Ohio, and they likewise refused, holding it to be an obligation of the United States.

After reports by two committees, and a warm debate and close division in committee of the whole, an act was passed February 21, 1806, directing the salaries of the Territorial officers to be allowed and paid at the Treasury until March 1, 1803. This therefore may be deemed an authoritative decision of the subject.

CHAPTER XI.

THE PIONEERS.

THE next thirty years of Ohio life may be summarized as the long struggle of the pioneers with the forest and bad roads; they were literally getting out of the woods. The first migration of the traders and hunters was past. The murderous foes of Logan, Cornstalk, and the Moravians had disappeared. The early settlers who followed them had, by a sudden revolution, set up a state and begun a new order of things. Then came an immigration, attracted not only by rich land and love of adventure, but by the strong prestige which the free state, built upon the Ordinance of 1787, had at once acquired. The immigrants were not merely admirers of free commonwealths in the abstract, but numbers of them were men from Kentucky, Virginia, and states further south, who brought their slaves with them for emancipation. A reaction followed upon this movement. The masters, with the best intention, had unwisely set the freedmen adrift in a wild, uncultivated country, without fitness or capacity to provide for themselves. Bad results followed, and harsh legislation was resorted to as a check.

Laws were passed, not only to restrain the settlement of negroes, but to expel them. Among other measures, they were made incompetent as witnesses in any suit, criminal or civil, where a white person was a party. Violent outbreaks occurred in which expulsion, under these laws, was cruelly enforced.

The times were every way hard. The straits to which the forefathers of the state were reduced, in public as well as in private life, are to be seen in the pictures of their first capitol at Chillicothe, of hewn logs, two stories in height, with an imposing front of thirty-six feet on Second Street, and twenty-four feet on Walnut. Its grand feature was fifteen glass windows, each of twelve panes, eight by ten inches in size, a degree of splendor thought to be unequalled in the territory until eclipsed by the Blennerhassets. Here sat the territorial assemblies in St. Clair's time. Its successor, erected by Ross County in 1801 to accommodate the assembly and the courts, far surpassed it. This probably was the first public edifice built of stone northwest of the Ohio. It was about sixty feet square, surmounted by a belfry and lightning-rod, upon which the American eagle, with widespread wings, long did duty as a weathercock. Here the convention which formed the Constitution of 1802, and the state legislature, for many years held their sessions.

The millions who are dwelling in peace and plenty in the broad farms and busy towns of

Ohio to-day, can get no realizing sense, from mere words, of the hardships by which their prosperity was earned. The toilsome journey, the steep mountain ways, the camping-out where there were no inns and hardly a road to guide them, were as nothing to the dreariness which, at the journey's end, confronted the immigrant and his devoted wife and tender children. The unbroken forest was all that welcomed them, and the awful stillness of night had no refrain but the howl of the wolf or wailing of the whippoorwill. The nearest neighbor often was miles away.

Their first necessity was to girdle the trees and grub a few acres for a corn crop and truck patch, sufficient for a season. As soon as the logs were cut a cabin was built, with the aid of neighbors. Necessity invented the "house-raising," as it did the log-rolling and corn-shucking. This habitation, with its clapboard roof, its single room, and door, if any, swinging upon wooden hinges, with no window but a patch of greased newspaper between the logs, and no floor but the ground, was often finished at nightfall on the spot where the trees had stood in the morning. The daubing of the chinks and wooden chimney with clay, and a few pegs in the interior for the housewife's draperies, were all that the Eastlake of those days could add to the primitive log cabin.

But food, rather than shelter, was the severest want of the pioneers. True, the woods were full of game, but venison, turkey, and bear-meat all

the time became tiresome enough. There was no bread nor salt. The scanty salt-springs were therefore precious. The Indian corn, when once started, was the chief reliance for man and beast. The modern Ohioan may know of hominy, but the art of making hoe-cake, ash-cake, johnny-cake, the dodger, or a pone, is lost. This crop, convertible also into bacon, pork, and whiskey, soon became the staple of the country. The want of mills at first led to singular devices. Corn was parched and ground by hand or by horse-power. At Marietta an ingenious application of power was obtained by bracing a mill-wheel between two boats anchored in the current of the Muskingum, — a powerful mill-race without a dam.

The furniture of the cabins and the dress of the people necessarily partook of the same absolutely rustic simplicity. Excellent tables, cupboards, and benches were made of the poplar and beech woods. The buckeye furnished not only bowls and platters for all who had no tin or queensware, but also the split-bottom chair still in popular use. Bearskins were bed and bedding. The deerskin, dressed and undressed, was very much used for clothing, and the skins of the raccoon and rabbit formed a favorite head-gear. But wool and flax soon abounded, and spinning-wheels and looms became standard articles in every house. The home-made tow-linen and woolens, or mixed flannels, linseys and jeans, constituted the chief materials for clothing. For

dyestuffs the hulls of the walnut and butternut and a root of bright yellow first answered, but were superseded by indigo and madder, which became almost uniformly the colors of the hunting-shirt and the warmus. These primitive fashions gradually yielded as store goods, together with iron and Onondaga salt, began to be introduced, by the great Pennsylvania wagons, from Pittsburgh and the ports along the Ohio River. After the purchase of Louisiana considerable imports came from New Orleans by keel-boats.

The pioneers had pastimes and festivities also in their own way. Besides such gatherings as those already mentioned, there were the sugar-camp, the militia musters, the bear hunts, the shooting matches, and the quarter race. At these the neighborhood for miles around was wont to gather. The quilting party also was a thing of joy in feminine circles. Here the housewife made a gala day for her friends by collecting them round her frame to put together one of those decorative works, a pile of which, to the pioneer mother, was esteemed of more honor than all the shawls of her modern granddaughter. A wedding, among people of the better sort, was a three days' festivity. The gathering on the first day included a variety of the sports above mentioned, according to taste and circumstances. Next came the nuptials, the invariable dance, and the feast. The infare closed the third day with an escort of the bride to her new home, and the

ride was not unlike that to Canterbury in style. The house-warming ended with another dance, in which there was no modern stiffness or dawdle.

Camp-meetings were another early custom, originally adopted to supply the want of Sunday worship. The country store, also, was an important centre, especially when the county seats were distant. There was little money, and business was chiefly in barter for peltries, ginseng, beeswax, and such products as could be transported by packhorses. Cut money, or "sharp shins," was a curious necessity of the times. For want of small change, the coins, chiefly Spanish, were cut into quarters, and so circulated. By a law of the governor and judges, in 1792, it was enacted that, as the dollar varied in the several counties of the Territory, all officers might demand and take their fees in Indian corn, at the rate of one cent per quart, instead of specie, at their option. In trading, the deerskin passed readily for a dollar. The bearskin brought more, and the peltries variously less. Beaver were rare, and soon became extinct.

A curiosity of later date, when roads and wheeled vehicles became practicable, was the traveling museum. It consisted of three, four, or more box-cars, mounted on low wheels, and lighted by windows in the top. These, on arriving at the show-places, were united, end to end, so as to form an interior gallery, through which the admiring spectators passed to enjoy the sights. Shelves

and glass cases were filled with objects of every description, from the bones of the mastodon down to Dr. Franklin's veritable penny whistle. Panoramas of colored engravings were exhibited through magnifying-glasses, and the whole world was brought before the eye by the pulling of a string. The grand attraction was the gallery of wax figures, among which the most captivating were the Sleeping Beauty, Daniel Lambert, Washington on his deathbed, and perhaps the actors in the latest atrocious murder, all in one mingled scene.

Schools were an object of the very earliest interest to the settlers of Ohio. The first school was not the free school, however, for which Congress had set apart the munificent foundation of one thirty-sixth part of all the lands in the state. This was to wait until the gift should be ripe for the purpose. Pride and ignorance, moreover, were bitterly opposed to the free system. Schools were sustained for twenty-five years by the parents of the pupils, and though of divers sorts, were by no means inefficient. Hardly a township or village was without one. Generally they were of humble architecture, but had good teachers. The mixture of studies would be regarded now as heterogeneous. Discipline was of the most rigorous type. "Toeing the mark" was the test of decorum. At the teacher's desk there was commonly a straight line drawn or cut on the floor, to which every one of the class reciting was bound to stand

erect under direful penalties if neglectful. The pupils were trained also to "make their manners," and in those days always gave a bow or curtsy to the passing traveler on the road. Many of the men who taught these schools were of superior education, and the names of some are kept in grateful memory. One of them deserves more than a passing mention. This was Francis Glass, who about the year 1820 kept a school for the farmers' children in a remote part of Warren County. In the midst of this drudgery he conceived and wrote the life of General Washington in Latin, a volume of two hundred and twenty-three pages. After his death it was published by his friend, Prof. J. N. Reynolds, with the approval of Charles Anthon, Drs. S. B. Wylie, Wilbur Fiske, and other classical scholars, as not only a literary curiosity, but, to use Dr. Anthon's words, for its easy flow of style, and the graceful turn of very many of its periods.

Another phase of the times is given by Judge Burnet in his *Reminiscences*, where he speaks of the long journeys made by the judges and lawyers on horseback through wilderness and swamps across the Indian country, in the annual rounds of the courts. They traversed distances of sixty or eighty miles in these circuits without seeing the habitation of a white man, carrying blankets and supplies for their bivouacs, often made in swamps where the roots of the trees afforded the only bed. The Indians entertained them always

with hospitality. Old Buckongehelas on one occasion made up a grand ball game on the St. Mary's for their diversion. Riding the circuit in company long continued to be the custom of the judges and the bar, the lawyers residing in only a few of the larger towns. If the traditions be credited, the old court-houses and the wayside must have echoed with a wonderful mingling of law and hilarity. Hammond, Ewing, Corwin, and Hamer all began their practice in this school.

It was not many years before these primeval conditions began to wear away. In the more fertile and accessible counties the farms and houses, with their grounds and blooming orchards, their well-filled barns and herds of cattle, horse, and swine, gave a new aspect to the country. Mansions of greater proportions and elegance were to be seen here and there, with interiors furnished with mahogany, mirrors, and all the fittings of life in the older states. The advance in the ways of polished society was a grief to McDonald, the biographer of the pioneers, who "well remembers it was in Mrs. Massie's parlor he first saw tea handed around for supper, which he then thought foolish business, and remained of that opinion still." The earliest of these stylish mansions was that of the Blennerhassets, built with a broad Italian front, at the head of a large island in the Ohio, near Parkersburg. Dr. Hildreth, in his "Lives of the Early Settlers," has preserved a full description of this superb establishment, a para-

dise in the wilderness, and its accomplished builders, and shows that Mr. Wirt's picture was not so extravagant as has been supposed.

In state affairs the legislature had given evidence of its disenthralment by establishing eight new counties at its first session. By the year 1810 the number had been increased to forty-one, the population of the state, at that time, having risen to 230,760 in number. More than a third of the state had been cast into the Indian Territory. In 1804 the Firelands and all the Reserve west of the Cuyahoga, together with the military lands lying between the Reserve and the treaty line, were purchased from the Indians, and the proprietors of the Firelands incorporated by the legislature. Their names fill more than eighteen pages of the Land Laws of Ohio, where the towns, and the precise loss of each sufferer, in the raids of Tryon and Arnold, are recorded for history. The Connecticut Land Company caused their purchase to be surveyed into townships five miles square. Six of these, including Cleveland and Youngstown, were sold. All the rest were subdivided among the proprietors by the close of the year 1809. Still the Western Reserve did not move.

In 1805 the directors of the Firelands put them in charge of Taylor Sherman, of Connecticut, as their general agent. His mission was accomplished by a full survey, allotment, and partition among the numerous owners, completed in 1811. Mr. Sherman, however, contributed

more than this to the history of Ohio. In 1810 he was followed by his son, Charles R. Sherman, who had been educated and admitted to the bar in Connecticut, and was now settled in Lancaster. In that distinguished home of lawyers he took a prominent position, and was appointed one of the judges of the supreme court of the state. He died in 1827, while on the circuit. In the earlier volumes of the decisions of that court he has left an enduring monument of his rank as one of the ablest lawyers and judges of the state. Among his children are General William T. Sherman and Senator John Sherman. Ohio, therefore, may attribute to the Firelands, and the misfortunes by which they were founded, no small share in her promotion.

Another treaty with the Indians, in 1808, secured a roadway between the Firelands and the rapids of the Maumee, with land a mile in width on both sides for settlement ; also a roadway from Sandusky up to the treaty line. But how little it was worth is related by Daniel Sherman, who, in escaping from Huron County to Mansfield at the Indian outbreak in 1812, did not find a cabin or clearing in forty miles. The statutes were prolific of new roads, new counties, and schemes for developing salt-springs and navigable rivers. But there was no money to make them.

A far more important measure was the movement by the Ohio senators in Congress for utilizing the two per cent. fund which had been pledged to the state for making a road between

the Ohio River and tide-water. The special committee to which, on Mr. Worthington's motion, the subject was referred in 1805, recommended the route by way of Cumberland, which became the national road. Under an Act of Congress, March 29, 1806, commissioners were appointed to lay it out. Wheeling was adopted as the crossing place on the Ohio, because it was not only on the direct line to the centres of Ohio and Indiana, but was safer for connection with the navigation of the river. Maryland, Pennsylvania, and Virginia ceded the right of way, and contracts were made in 1808 for constructing a turnpike road, metaled with broken stone one foot in depth, and nowhere to exceed a gradient of five degrees. This, it was promised by Mr. Gallatin, the Secretary of the Treasury, would effect a reduction in freight of one dollar per hundred on all the produce of the West, and its returns from the East. As this would be a gain of two dollars upon every barrel of flour and pork, it will be seen how vitally interesting it was to the people of Ohio. Their crops were profitless. Except on the Ohio and the rivers running to it, there was no outlet for the immense production of which the state was becoming capable. Every year, at the spring freshets, quantities of flour, bacon, pork, whiskey, and the fruits of the country adjacent to the streams were taken in flatboats to New Orleans and the intermediate markets. This would have

been a most profitable commerce but for the extreme hazards to which these frail and unmanageable craft were subject. The starting of these fleets annually was a spectacle of great interest at the towns on the Muskingum, Scioto, and the Miami. Keel-boats, built in the fashion of canal-boats, but lighter and sharper, were also used with profit, as by great labor they could stem the current of the Mississippi, and the cargoes which they brought back were the earliest considerable imports of foreign goods. Numbers of sea-going vessels were built on the Ohio River, and freighted with produce to the West Indies or Europe. Marietta alone is reported to have sent to sea, before the war of 1812, seven ships, eleven brigs, six schooners, and two gunboats. The entire commerce of Lake Erie, prior to this time, was carried on by half a dozen little schooners.

Besides their land-locked isolation, the pioneers, in clearing the forest and turning up the rich mould of their cornfields, encountered a far more desolating adversity in the ague, and violent biliary diseases, with which the soil was infected. Another strange pestilence, known as the milk sickness, was rife in certain parts of the state, supposed to be caused by some mysterious vegetable eaten by the cows in the natural meadows or prairie. But with all their drawbacks and early disappointments, the settlers manfully worked, and waited for the good time coming, and enjoyed freedom, peace, and plenty.

The earliest events which disturbed this life of Arcadian placidity were the Burr Conspiracy, and the war in 1812 between the United States and Great Britain. The former was but a bug-bear, sprung upon the Western people by Mr. Jefferson's proclamation, November 27, 1806.

The terror excited by this hazy enterprise became ludicrous when its actual proportions were known. Mr. Jefferson was probably misled by General Wilkinson, the Belial and arch mischief-maker of his time, and somewhat also by Colonel Joseph Hamilton Daviess, who seems to have beheld the ghost of the old Spanish conspiracy stalking abroad. Meade, the acting governor of Mississippi, had been somewhat terrified, but he pricked the bubble by arresting Burr, January 17, 1807, and reporting to Mr. Jefferson, "This mighty alarm, with all its exaggerations, has eventuated in nine boats and one hundred men, and the majority of these boys or young men just from school." The trial, however, ran through six months, preponderating, as Chief Justice Marshall thought, in favor of the opinion that Burr's design was really against Mexico. He was therefore acquitted of the charge of treason, though Mr. John Quincy Adams, in reporting upon the expulsion of the Ohio senator, John Smith, as an accomplice, persuaded the Senate that it was a "crime before which ordinary treason whitens, and of which war was the mildest feature."

Since Blennerhasset's Island, where the scheme of this frightful crime was unmasked, was in Virginia, it may be wondered how Ohio became involved. Burr had but touched at Blennerhasset's, when he went out and returned, in his first sweeping tour in 1805, but as Blennerhasset was absent on both occasions, he made no stay. At Cincinnati he received an ovation. About the 1st of September in the following year he spent two days at Blennerhasset's. Then, in crossing Ohio to Kentucky, he stopped at Chillicothe. As was the custom in the hospitality of those days, he went uninvited to the residence of a gentleman near there, with whom he had been associated in public life at Washington. The host was absent, but Burr was politely entertained by his wife and family, and amused himself with the garden and flowers. He alluded also to his brilliant scheme at the South. The hostess was a most skillful florist, and in after-days was wont to say she had derived much of it from his instructions. After waiting two days, Burr took his departure for Kentucky. To a playful remark of his hostess as to seeing more of Ohio, he replied, "No, madam, no; the Ohio people are too plodding for my purpose."

This seems to have been all of his campaign in Ohio. But Blennerhasset had been busy at Marietta, building boats, recruiting volunteers, and engaging supplies for an expedition or colony on the Wachita River in Louisiana. In all this,

nothing amiss was suspected by the authorities or the people. But unluckily for Blennerhasset, he dined about this time with the Hendersons on the Virginia shore, and after dinner indulged in some bombast concerning Colonel Burr's brilliant talents and prospects, which alarmed those gentlemen excessively. They reported it to a Mr. John Graham, who was looking about, as a "confidential agent," for the President. He had several interviews with Blennerhasset at Marietta, in which the latter explicitly avowed that colonizing the Bastrop or Wachita lands was the object, and that the expedition was to be a strong one, and well armed, whether for Indians, Spanish, or game. Graham informed Blennerhasset of his mission and instructions. He objected to the force, and to the armed character of the plan. Blennerhasset insisted that he had a right to carry out his plans, and that the government had no authority to interfere. This intercourse continued in a friendly way for some days, but suddenly, after an interview of Graham with the Hendersons, it was dropped. The confidential agent hastened to Chillicothe, where the legislature had just assembled. Upon information and affidavits presented by him to the governor, the legislature hastily passed a law, December 6th, to prevent acts "hostile to the peace and tranquility of the United States within the jurisdiction of Ohio," and appropriating one thousand dollars to enforce the provisions of the act.

Governor Tiffin issued a proclamation of warning, and called out the sheriffs and militia along the Ohio. Under warrants issued to the sheriff at Marietta, General Buel forthwith seized Blennerhasset's ten boats laden with a hundred barrels of corn-meal. Blennerhasset himself would have been arrested but for the opportune arrival of Tyler and Smith, two of his adjutants, with thirty men from the Beaver. Graham's remonstrance, and this sudden expression of public feeling, half determined him to abandon the expedition. Mrs. Blennerhasset appears to have rallied his courage, and at midnight, December 10th, hastily packing up a few necessaries, he fled, in the boats of Tyler and Smith, with a force of thirty-one men, armed with five rifles, three or four pairs of pistols, one blunderbus, one fusee, and a keg of powder. At the moment of embarking there was a question how he should avoid arrest at Gallipolis, and a plan was formed for sending horses to enable him to pass around that place. Mrs. Blennerhasset, who had accompanied him to the boats, again interfered, and sent a canoe to take her husband ahead of the fleet. He and his party eluded the officers at all points and escaped. He never again saw his beautiful home. In the winter of 1811-12 the mansion was totally destroyed by fire.

A little episode followed, which must conclude the story of Blennerhasset's folly and misfortune. Mrs. Blennerhasset, as has been seen, had been left

behind with her children. His flight was taken as a clear proof of guilt. The militia of Wood County, Virginia, took possession of the house and island, purveying for themselves by shooting the cattle, consuming the supplies, and burning the fences for firewood, regardless of the woman or her wants. Their colonel, it should be said, stopped this vandalism as soon as informed of it. In the midst of the ravages, Messrs. William Robinson and Morgan Neville, young travelers from Pittsburgh who were descending the Ohio in a comfortably fitted flatboat, stopped at the island. They found Mrs. Blennerhasset bewildered, and the militia insolent. The travelers, suspected of having a part in the conspiracy, were arrested by the militia and brought before two magistrates at Marietta for examination. They were so frank and manly, however, in their explanations and professions of mere regard for the unhappy lady, that they were discharged. A night or two afterwards their boat quietly dropped down to a garden gate, where Mrs. Blennerhasset and her children, by a private arrangement, were in waiting. They were found by the gallant young deliverers, and safely transferred to the cabin of the boat. Thus she parted from the fairy isle.

A violent commotion in the state politics was excited for three or four years by a wrangle of the legislature with the courts. Justices of the peace had been granted jurisdiction to try suits, for any amount not exceeding fifty dollars, with-

out a jury. This the judges of the Common Pleas decided, much to the indignation of the law-makers, was a violation of the right of trial by jury, secured by the Constitution of the United States, in any controversy exceeding twenty dollars in value. The decision was sustained by the Supreme Court. The judges were, however, impeached, and some who were arraigned narrowly escaped conviction. But a new assembly was elected in 1809, and though the majority were of the indignant party, they could not count upon the requisite two thirds in the Senate. Resort was had, therefore, to a more efficacious course. The term of office was seven years, and the term of seven years since the state constitution went into operation was just expiring. Most of the judges had been chosen much later, either as new appointments or to fill vacancies. It was resolved by the majority in both branches of the assembly that their terms of office must all be limited by the original term of those who had been first appointed. The three supreme judges, three president judges of the Common Pleas, all the associate judges of that court, more than a hundred in number, and all the justices of the peace, were discharged at a swoop. This radical measure was well named the "Sweeping Resolution."

As part of the contention, the seat of government was transferred at the same session from Chillicothe to Zanesville. Commissioners were appointed to report, at the next session, the "most

eligible and central spot for permanently establishing it." Their selection was Dublin, a village on the Scioto, some fourteen miles above Columbus, but this was overruled by the assembly. By an act passed February 14, 1812, a proposal was accepted by which the owners of the "high bank on the east side of the Scioto River, opposite the town of Franklinton," then a dense forest, bound themselves to lay off a town; present a square of ten acres to the state, upon which they were to erect a state-house, and public offices such as the assembly should require; and furthermore, give twenty acres of land to the state for a penitentiary, and erect a suitable building. By another act the name of Columbus was conferred upon the town, and it was ordained to become the seat of government of the state on the first Monday of December in the year 1817, but subsequently made a year earlier. The seat of government meanwhile was restored to Chillicothe.

The proximity of the new capital to the Indian boundary indicates the confidence reposed in the Wyandots, who were dwelling just above on the Sandusky Plains. The right of free hunting and passage, which General Wayne gave to the Indians in the lands they ceded, so long as they were peaceable and orderly, had not been abused. They wandered where they pleased, and committed no disorder when not betrayed by white men with whiskey. The chiefs in their visits were always entertained socially with much dis-

tion. Tecumseh, though not yet celebrated, was acquiring importance by the wide-extended, covert movements which it was observed he was making. He visited Chillicothe in 1807 on business not generally known. In company with Blue Jacket and a party of warriors he was invited to supper by a gentleman concerned in it. They took their places at the table with perfect propriety, the mistress of the house presiding, and dispensing her luxuries among them. Suddenly, however, there was a disturbance, and two or three of the younger braves leaped up with angry mutterings, as though bent on mischief. Tecumseh at the moment was in close conversation with his entertainer, but quickly observing the alarm of the ladies, he arose, drew himself up, and with an expressive glance and a stamp of the foot brought things to order. It was discovered that one of the young bucks, accidentally, had not been served with coffee, and felt himself insulted.

It soon became manifest that mischief was brewing among the Indians on the border of Indiana, and that Tecumseh was in it. He was not a chief and had no place in the Shawanees council. The object which he and his wily brother Elsquatawa the Prophet had in view was, to break the power of the chiefs, in their own and all the tribes, whom they suspected of sacrificing the Indian territory and hunting-grounds, in treaties with Governor Harrison, for their own benefit. They withdrew to Greenville, and gathered into

this Adullam the discontented and disorderly warriors of all the tribes. Here the Prophet, around whom this part of the plot centered, set up a religious order for the reform of the Indians as he professed, by mysterious meetings and ceremonies, to which none were admitted but the initiated. Tecumseh was moving in every direction, urging the hostile elements to combine, in another grand struggle like that of Pontiac and the Northwestern confederates, to drive the whites across the Ohio. Atwater met him among the Onondagas in 1809, and, as interpreter of his speech, told them he had "visited the Florida Indians, and Indians so far north that snow covered the ground at midsummer."

The scheme, as usual, was attributed to British intrigues and influence, though it is well known that the governor of Canada, and the British minister at Washington, gave early warning to the United States in 1810 that the Northwestern Indians were meditating war. Governor Harrison, unfortunately, entertained this prejudice, without being conscious that he was himself the perficient cause of the hatred which drove Tecumseh and his forces in 1812 into the British alliance.

At this moment when the state, with a quarter million of people, an exuberant soil, a dozen considerable towns, and the prospect of another British and Indian war overhanging it, lay, like a young giant, bound hand and foot, occurred the

signal event which was to give the Mississippi valley an impetus to an illimitable growth. This was the launching and departure from Pittsburgh, in October, 1811, of the steamboat Orleans, first of the mighty fleet which put the currents of the great river to naught. On this voyage Mr. Roosevelt, who had superintended the construction for Messrs. Fulton and Livingston, with his young wife and children, Andrew, Jack, the pilot, Baker, the engineer, and six hands, besides domestics, constituted the sole freight. The novel appearance of the craft, and the speed with which it passed through the long reaches of the Ohio, excited wonder and terror among the riparians. Few of them had heard of steamboats. Some supposed the comet, then near, had fallen into the river. War with England being expected, one little town was alarmed with the cry, "British are coming!" and took to the hills. The Orleans being prevented by low water from passing the falls at Louisville, was employed between that place and Cincinnati during this detention. On the Mississippi she incurred much peril from the effect of the extraordinary earthquakes which continued from December until February. She reached her destination December 24th, but neither the Orleans, nor the two steamers from Pittsburgh which followed her in 1813 and 1814, returned to the Ohio. The first which accomplished this was the Enterprise, of Brownsville, Pennsylvania, under

the command of Henry M. Shreve. In December, 1814, he took a cargo of ordnance stores to General Jackson in fourteen days from Pittsburgh. After serving that officer until May, Captain Shreve set out for Pittsburgh, and in twenty-five days arrived at Louisville. For this wonderful feat the people of the town honored him with a public dinner.

Commerce, though still suffering a check eastwardly, now shed some of its genial influence over the valley of the Ohio. The lake shore, and the northwest portion of the state, remained inaccessible. It was not until August, in the year 1818, that the first steamer on Lake Erie, the *Walk-in-the-Water*, made her appearance, having been built at Black Rock, within a few miles of the spot where the Griffin was launched in 1679. New York as early as 1811 had been agitated with the grand design of connecting Lake Erie with the Hudson. In response to her call, the legislature of Ohio, in January, 1812, had heartily resolved that the cost of such a work should be assumed by the United States. Poverty, and not her will, was at fault.

CHAPTER XII.

WAR AND DEBT.

IN the year 1812 Ohio was called to her first essay in war, which, though disastrous and bloody, was without dishonor to the state. It is unnecessary to enter into the causes for which the war against Great Britain was declared by the United States. It was a total surprise to the British Cabinet and to the authorities in Canada. Ohio, for her part, was ready, but terribly handicapped. Mr. Madison's feeble administration had for its war minister Dr. Eustis of Massachusetts, and for its territorial governor at the Northwest, William Hull, of the same state. This superannuated relic of the Revolutionary army unhappily found favor in the eyes of the Secretary, and, without a single qualification for the command of an army, was appointed a brigadier-general and commander of the Western department. The nomination was resisted in the Senate as unfit, but sentiment prevailed. The Ohio senators, unpatriotically it was thought, had voted against the war; professedly for want of preparation, but more, perhaps, under apprehension of danger from the mistake.

Governor Meigs, under precautionary instructions from Washington, had in April called for twelve hundred volunteers. In May, a larger number assembled at Dayton, and were organized into three regiments: the first, from the Scioto valley, under Duncan McArthur as colonel, and James Denny and William Trimble as majors; the second, from the Miami valleys, under James Findlay as colonel, and Thomas Moore and Thomas Van Horne as majors; the third, from the Muskingum and eastern Ohio, supplemented by companies from the Miami and Scioto, commanded by Lewis Cass as colonel, and Robert Morrison and Jeremiah Monson as majors.

They were mustered into the United States service under General Hull, in the latter part of May, and marched to Urbana. Here they were joined by the 4th U. S. Infantry, under Lieutenant-Colonel James Miller, — veterans who had fought at Tippecanoe, and who afterwards, under this gallant commander, charged the British batteries at Lundy's Lane. This gave General Hull a force of nineteen hundred and fifty troops.

War was not declared until June 18, at which time General Hull was supposed at Washington to have arrived at Detroit. He had, in fact, moved but a few days before from Urbana, and arrived at the rapids of the Maumee on the last of the month. The march of ninety-two miles, undertaken by raw troops and with wagon trains that were forced to make their own road through

the worst swamps in the state, was effective work, though Hull, in his subsequent defense, reproached his men as undisciplined and insubordinate. Besides this work, two stockades had been erected at the crossing of the Scioto and of Blanchard's Fork; the former known as Fort McArthur (Kenton), and the latter Fort Findlay.

At the Maumee, Hull's military incapacity began to show itself. Finding a small schooner, just arrived from Detroit, he transferred to it the sick, and stores and baggage of the army, sending with his own baggage all his military papers; this, too, although warned by letters received at Fort Findlay that the declaration of war was imminent. The vessel was captured the next day opposite Malden by a British gun-brig, the *Hunter*, and Hull's papers were forwarded immediately to General Brock, the governor and military commander of Upper Canada, then on the Niagara. All his instructions, plans, and army rolls were thus betrayed to the enemy by an inconceivable stupidity which in popular opinion argued nothing less than treason. The proceeding was attributed by General Hull, at his trial, wholly to the neglect of the Secretary of War to give him warning. This brought out the fact that on the morning of June 18, in anticipation of the vote by Congress that day, the secretary had written to General Hull to put him on his guard, and in the evening had dispatched an

express with official notice of their act. The letter failed to reach him, and the despatch was not received until July 3, two days after he had passed the Maumee.

This loss of a week contrasted most unfavorably with the vigilance and alertness of the enemy. Intelligence of the declaration of war by Congress reached New York on the 20th. The agents there of the Northwest Fur Company sent expresses immediately to their heads at Montreal and Fort George (mouth of the Niagara). Thus on the 25th the news was known to General Prevost, commander-in-chief at Montreal, and to General Brock at Fort George. By the same vigorous agency Brock transmitted the intelligence to Lieutenant-Colonel St. George, commanding the fort at Malden, and sent orders at once to Roberts, the captain of his little garrison at Sault Ste. Marie, to gather all possible forces, and capture the United States post at Mackinac. All Canada had been aroused before Hull had passed the Maumee.

The army arrived in Detroit July 5, and General Hull could have passed the river that day. Lieutenant-Colonel St. George seemed equally inefficient, but his force was only two hundred men. General Hull was urged by his colonels to cross immediately, but affected to have no authority, and felt much more at ease in his fort, fully armed with heavy guns, and having complete command of the river and opposite shore. A

further despatch from the Secretary arrived on the 9th, authorizing him to commence offensive operations, take Malden, and extend his conquests, "should his force be equal to the enterprise." He could no longer resist the urgency of the colonels, and with most of his force crossed the river July 12; but seizing upon the concluding words of the despatch as a pretext, he encamped at Sandwich, two miles below, and there sat for four weeks without striking a blow. The excuse for stopping was that siege-guns must be remounted and floating batteries constructed before Malden could be assaulted.

McArthur and Cass being the most impatient, the former, with Denny's battalion of his regiment, was detached about the 15th to capture a depot of military supplies at McGregor's Mills, on the river Thames. This march of sixty miles and back, through the most thickly populated district in Upper Canada, was accomplished in three days and nights, without the loss of a man, and with the capture of a stock of provisions which would have taken the army through to the Niagara River. Cass and his regiment, Colonel Miller accompanying as a volunteer, marched on the 16th to the river Aux Canards, three miles from Malden, but was instructed by Hull, as he persistently claimed, merely to reconnoitre. Finding the bridge guarded, Cass crossed at a ford further up, and came upon the outpost at the bridge so suddenly that they fled, and he pursued them to

within gunshot of Malden. Cass wrote to Hull for authority to follow up his advantage. Hull was indignant, but upon receiving a further message, probably indorsed by Miller, he left the advance guard to their own discretion, but sent no reinforcement.

These circumstances show the impotency of an army without a general. It is mortifying to reverse the picture and witness the triumph of a general who was without an army. Hull's large force and early advance had taken the British generals by surprise. Still greater was their chagrin that St. George had suffered the invasion at Sandwich without firing a shot. But General Brock, though young, proved to be as herculean in courage and character as he was in person. His small force of regular troops was already confronting a threatened invasion on the Niagara and Lake Ontario. He sent orders instantly to Captain Roberts, at Sault Ste. Marie, to attack Mackinac, and dispatched Colonel Proctor with a hundred of the 49th Regiment to Malden. He feared it was too late, supposing that Hull would at once advance and sweep Upper Canada. But he did not pause or hesitate an instant in summoning every means of resistance. He called a meeting of the provincial assembly. He appealed to Prevost for a few companies of regulars, but they were not to be had. He called out the militia of his province. He was alarmed at finding that numbers were disaffected, and more inclined

to join Hull than himself. He summoned the Mohawks on Grand River to send him their warriors. To his amazement they sent back a message that they were neutral. This unexpected intelligence, he wrote to Prevost, "has ruined the whole of my plans, as the militia will now be alarmed and unwilling to leave their families." He met his provincial assembly July 27th at York (Toronto), and called upon them to vote supplies and martial law. But the majority were disinclined to hostile measures. For ten days General Brock was alternating between them and his troops protecting the Niagara line, inciting the courage of both.

He brought his indefatigable exertions to a crisis, August 6th, by adjourning the assembly, proclaiming martial law upon his own responsibility, and setting out for Long Point, where he had ordered his little force to concentrate. This force consisted of a few regular troops and three hundred Canadian militia. With these he embarked on the 8th in farmers' boats collected from the neighborhood, and coasting two hundred miles along the lake shore, through rain and stormy weather, arrived at Malden at midnight on the 13th, and on Sunday the 16th he had Hull and his army, Detroit and its fort with thirty heavy guns, and the whole frontier of Ohio and Indiana, captive and prostrate before him. Mackinac and Chicago also had fallen, and the savages of the Northwest, now set loose, came trooping to his standard.

To take such risks with such disparity of forces would have been simply reckless but for the quick and daring inspiration which prompted the action. Brock's decision to cross the river was made on discovering that Tecumseh and his Indians already held the opposite shore, and had had three desperate conflicts with detachments sent out by Hull to restore his communications with the Maumee.

At sunrise on the 16th he had taken a strong position five miles below Detroit, with three hundred and thirty regulars and four hundred militia, filling the woods on his left and rear with some hundreds of Indians. His bold and sudden advance upon the fort, the critical stroke in this achievement, was conceived only at the moment of landing, when he heard that McArthur, of whom he had a high opinion, was absent, having been detached with five hundred men by a back road to the Maumee. He decided at once to attack, and when within a mile of the fort his inspiration was crowned by the appearance of the white flag of surrender. Hull's four regiments, under such a general, would have swept the Niagara frontier. His pretext that the enemy controlled the lake was simply futile. It was enough for him that with the fort at Detroit he held complete command of the river, and thus had an open door to Canada.

But General Hull was prostrated by terror of the savages. For cowardice, and not for treason,

as sometimes insisted, he was sentenced by a court-martial to be shot, but on the recommendation of the court was pardoned, in mercy for his age and his good conduct in the old war. His main defense was that he had been victimized by an armistice arranged by Generals Prevost and Dearborn on the Niagara and St. Lawrence, but not extending to the Western army. He therefore had been sacrificed in the interest of the Eastern generals by a measure which enabled the enemy to concentrate their strength upon Detroit.

This ingenious fiction was so plausibly urged, that, although it was rejected by the court, it is adhered to by many writers. But the judgment of the court has been fully sustained by the disclosures in the "Life and Letters of General Brock," published in 1846. It appears that the armistice was arranged after General Hull's capitulation, and that General Brock was not aware of it until his return to the Niagara. Flushed with success, he had hastened back for the purpose of striking a similar blow at Sackett's Harbor. Well for Ohio that it was so. Had General Brock descended upon the Maumee and the Wabash with such a horde of savages as would have attended him, it would be difficult to reckon the consequences.

As it was, the state was panic-stricken. Brave men trembled for the tearful women and children who now clung around them. Even the sick staggered from their beds to escape the appre-

hended carnage. The Ohio regiments, sent home by Brock on parole, landed their boats near the Huron River, and being taken for the enemy the inhabitants of the Reserve fled *en masse*. The suspense for a time was dreadful. Governor Meigs called out several brigades of the militia, and fields and crops had to be abandoned. An eye-witness described the country as "depopulated of men, and the farmer women, weak and sickly as they often were, and surrounded by their helpless little children, were obliged, for want of bread, to till their fields, until frequently they fell exhausted and dying under the toil to which they were unequal. The horrors and fearful sufferings of the first year of the war can never be forgotten by the people of that generation."

Most fortunately, Governor Scott of Kentucky had raised three regiments of volunteers on the first report of Hull's dereliction, and with equal sagacity had appointed Harrison as a major-general to command them. Fort Wayne was already assailed by the British and Indians, and with this force Harrison marched on the 29th of August to its relief. At Piqua he was overtaken by an express from Washington bringing his appointment as a brigadier-general. He declined it, however, as it would subject him to the command of Winchester, another relic of the Revolutionary army upon whom Mr. Madison had conferred a brigadiership. Pushing through, Harrison broke up the siege of Fort Wayne September 12th, and then surrendered his command to Winchester.

This was the first harbinger of safety to the people of Ohio. At Piqua, on his return, he met another express from the President, bearing his commission as a major-general, and appointing him commander-in-chief of the Northwest. This placed him at the head of the regular troops in that department, as well as the Kentucky volunteers, the militia of Ohio, and of two brigades of militia then on their march from Pennsylvania and Virginia.

Gathering these forces, General Harrison first established a defensive line across the state from Wooster through Upper Sandusky to the St. Mary's, and thence down to Fort Wayne. He then attempted to form three columns for a converging advance to the rapids of the Maumee, intending thence to move upon Detroit. The left was under Winchester at Fort Wayne; the centre was of Ohio mounted men under Brigadier-General Tupper, on Hull's road to the Maumee; and the right, under his own command, was to have moved from Sandusky. Winter closed the campaign before this vexatious combination could be effected, and the people of Ohio had rest.

The campaign of 1813 was preceded by the horrid butchery, at the river Raisin, of a detachment of Winchester's troops, who had rashly been lured there. General Harrison hurried to the Maumee, and at the foot of the rapids erected Fort Meigs. In this strong position he defeated two attempts of General Proctor to carry it by

siege and bombardment. Proctor's second failure, in July, was concluded by an attack upon Fort Stephenson, on the Sandusky River (Fremont), a stockade in command of Major George Croghan, with a garrison of a hundred and fifty men, and an armament of one iron six-pounder gun. The desperate and bloody repulse, August 2d, finished the last invasion of Ohio by the British and savages.

Two days afterwards the event occurred upon which the campaign, offensively, was waiting. Commodore Perry's fleet, constructed at Erie, was, on the 4th, floated across the bar into deep water. He sailed to the head of the lake, to be seen of the enemy, and spent the last ten or twelve days of the month in Sandusky Bay, preparing for the impending conflict. General Harrison contributed a number of able seamen who were found in his army, and riflemen also, to act as marines. Perry took his position at Put-in Bay, to await the enemy; the British fleet stood out from Malden early in the morning of September 10th, and at 4 o'clock P. M., Perry sent to General Harrison the famous despatch: "We have met the enemy and they are ours."

With this powerful auxiliary, Detroit and its fort were flanked, the way across the lake was clear, the war was transferred to Canada, and soon completed. The troops, artillery, and supplies were collected at the mouth of the Portage River, and transferred by boats to the Eastern

Sister, the island nearest to Malden, and there concentrated, September 25th.

The next day Commodore Perry took General Harrison and Governor Shelby, who volunteered to serve under him, to reconnoitre Malden and the neighboring shore. The landing-place was selected; Governor Shelby sent orders to Colonel Richard M. Johnson, waiting with his mounted brigade at the river Raisin, to advance upon Detroit. The orders for debarkation, march, and the expected battle were issued that evening. On the morning of the 27th the whole army effected a landing, under cover of Perry's guns, at a point three miles below Malden, eager to redeem the American arms. But Proctor had withdrawn, and the fort and town were surrendered without resistance. Detroit, also, surrendered on the 29th, and was occupied by McArthur's brigade. On the 30th Johnson's brigade of eleven hundred mounted Kentuckians came in at a gallop, and on the next day joined the army in Canada.

This force was awaited before the pursuit of General Proctor should be commenced. He was ascertained to have posted his forces in a strong position at the Moravian towns on the right bank of the Thames, about sixty miles from Detroit. Here he was overtaken October 5th. There was an open beech woods stretching from the river to a morass miles in extent. Midway between the river and the morass was a narrow

swamp, by which the two wings of Proctor's forces were divided. Between this swamp and the river his regular troops were drawn up in two lines, supported by artillery on both flanks. The woods between the swamp and the morass were filled with his large force of Indians, said to be two thousand, under command of Tecumseh.

The position and array of forces was dangerous to attack, but by another military inspiration, quick as that of General Brock at Detroit, a blunder of Proctor was swiftly turned to advantage, and the result determined in fifteen minutes. As the Americans approached, General Harrison learned from the keen military eye of his chief engineer, Major E. D. Wood,¹ that the British regulars were formed in open order, leaving intervals between the files. His order of battle was immediately changed. A battalion of the mounted men, who were to have operated against the Indians, riders and horses equally trained to dash through woods and thickets, was ordered up; they charged in line upon the British regulars, received their fire without breaking, and galloped through. Wheeling about, they delivered their fire upon the rear of the disordered British, who were at once routed, and fled with their general pell-mell. Proctor's carriage and papers, and six brass fieldpieces, trophies of Saratoga, which had been captured at Detroit, were taken. The

¹ See Appendix, No. 4.

battle of Colonel Johnson and the left wing with the Indians was obstinately contested. But Tecumseh fell at the first fire, and when this and Proctor's flight became known the enemy gave way and scattered.

This victory was so complete that, as to Ohio, the war of 1812 was terminated. Her soldiers continued in the field under various commanders. Large numbers were in the hot campaign of 1814 on the Niagara. But it is an unpleasant fact, in this as in other matters deeply interesting in the history of Ohio, that the public offices contain no record or trace by which we can determine what soldiers Ohio had in the war of 1812, or what they did.

Peace returned in 1815, but without prosperity or healing in its wings. There was a general state of insolvency which became oppressive when the stimulus of the war was withdrawn and the business created by it ceased. A huge debt to the government had been long accumulating, from the unwise expedient, begun in 1800, of selling the public lands on credits of one, two, three, and four years, with interest. Thousands of poor settlers, deluded by this privilege, expended all they had in making the first payment, trusting to their crops, and the rise in value confidently expected, to carry them through. But they were unable to meet further payments.

Another heavy debt had been run up at the local

banks for accommodation loans, by persons who were eager to build, improve or speculate in lands. In the general stagnation these obligations could not be met, and many of the institutions which had embarked their means chiefly in such loans were as insolvent as their customers. All the banks, before and during the war, had been issuing paper currency without limit or control, and as specie payments had been suspended in most of the states they were in no condition to meet the resumption in February, 1817, which was required by Congress. In Ohio and other Western states the circulating notes of all banks were below par; notes of the best Ohio banks were at a discount, in New York, of eight to fifteen per cent.; others, twenty to twenty-five per cent. Merchandise and agricultural products had two prices, one in specie and another in paper.

The ignorance and perverseness of legislators made these complicated evils worse. Congress had been warned, at an early period, of the mischief certain to result from selling the lands on credit, but politicians kept up an outcry that it was "the people's security against the monopolists." The people suffered to such a degree that, according to Judge Burnet, a debt of \$22,000,000 was due to the government in 1820 at the land offices in the West. Congress, in January, 1821, cut the knot by a law permitting the debtors to relinquish the lands not paid for,

retaining so much as their payments would cover, without interest.

The legislature of Ohio, to cure the ills of the banks, adopted Dr. Sangrado's treatment, and chartered more of the same sort. A brood of twelve was hatched by a general law passed February 23, 1816. In this job all the banks, old and new, entered into a bargain with the state by which, in lieu of taxes, each of them was to set apart one share in twenty-five of its stock to the state, and accumulate the dividends upon it until the state should own one sixth of the capital. This, however, was to be subject to future legislation, and we may infer how it operated from the fact that in 1825 the legislature relinquished its claim on stock by accepting a tax of two per cent. upon all previous dividends, and four per cent. upon all made thereafter.

This juggling with the banks and the currency led to a heated strife between the Whig and Democratic parties, until the adoption, in February, 1845, of a new system, based upon sound and secure principles.

Early in this bank imbroglio there was a bold attempt by the legislature to exclude the Bank of the United States from carrying on business in Ohio. Two branches had been established in 1817 at Cincinnati and Chillicothe. A conflict with the local banks immediately ensued, as the United States Bank had agreed to receive and remit the funds of the land offices for the gov-

ernment. The Commercial Bank of Lake Erie (Cleveland) in May, 1818, refused to redeem its notes in specie because presented by a United States branch bank. In a card issued by Mr. Alfred Kelly and the directors, this action was upheld on the ground that the avowed object of the United States Bank was to destroy the country banks, drain the country of specie, oppress the public, and endanger the liberties of the people. In February, 1819, a tax of \$50,000 upon each of the branches was assessed, if they should continue to carry on business after September 1st. Ralph Osborn, the auditor of state, summarily took from the Chillicothe branch moneys sufficient to cover the tax upon both. In a celebrated suit by the bank against the auditor, the Supreme Court of the United States reiterated its previous judgment, that banks established by the United States as government agencies cannot be taxed by a state, and decided a still more subtle point, that, as the auditor was a mere trespasser, he could not escape on the ground that the suit, though nominally against him, was really against the State. It was upon this that the legislature, under the advice of their eminent leader and counsel, Charles Hammond, had principally relied. The manifesto, composed by Mr. Hammond, which they put forth in the heat of the contest, was regarded as a matchless exposition of state rights. The rage against the bank was such that General McArthur, one of its chief

supporters in the legislature, with all his popularity, lost his election in Ross County. But the storm and the manifesto alike were dispelled by the majestic logic of the Chief Justice.

The establishment of the state capital at Columbus was celebrated December 3, 1816, by the first meeting there of the legislature and governor. Governor Worthington's speech forcibly presented the financial disadvantages from which the state was suffering. As objects also claiming particular attention of the assembly, he pointed to the necessity of having public schools and better roads. In his speech to the next assembly he brought before them again the importance to the state of organizing a system of free schools, and putting it into operation. The great difficulty of procuring teachers led him to suggest a normal school at the seat of government as the solid foundation for such a superstructure.

Nothing now intervened between the pioneer stage and the completion of the state in its full territorial sway but an adjustment with the Indians. This was quickly and satisfactorily accomplished by treaties with the various tribes, at conventions held in 1817 and 1818, by Generals Cass, McArthur, and others, as commissioners of the United States. All that part of the state north of the Greenville treaty line and west of the Firelands was ceded for annuities perpetually secured to each tribe, but large tracts reserved by each for their homes. Subsequently

these reservations on the Sandusky, the Auglaize, and at Wapakoneta were exchanged by the tribes, one after another, for larger tracts west of the Mississippi, until all were removed. The last of them, the Wyandots, filed through the streets of Cincinnati in the summer of 1841, a motley train in this migration.

The northwest quarter of the state was divided in February, 1820, nominally, into fourteen counties, unorganized, of course, as there were not citizens enough in half of them to form a grand jury. Ohio thus, after many mutations of sovereignty and ownership, became at length a state in her own right.

What appearance this new country and people wore, in those days, is briefly told in the diary of Dr. John Cotton, a young physician from Plymouth, Massachusetts, who settled himself soon after the war at Marietta. He was of the impression that the Ohio Company had not been entirely judicious in their choice, and in November, 1815, went upon a short tour of observation.

At Zanesville he found an active, enterprising population of two or three hundred, busy in digging a short canal through rock, for a water-power and factories. To pay the expense a private bank was issuing bills, which were in good credit. Coal already was used exclusively for fuel. Lancaster was a flourishing town of eight hundred or a thousand people, mostly Germans, and was surrounded by beautiful farms. On

Zane's Road numerous wagons of "movers" were going west, camping at nights like Indians around their fires. Chillicothe, still the capital, was reported to be very sickly, from its low position, but no town which Dr. Cotton visited "disappointed him more agreeably." It was then the second town in the state in population, having three or four thousand inhabitants, and "in point of appearance the finest in the state." Turning thence up the rich valley of the Scioto, he found a curiosity in the dry prairie of the Pickaway Plains, and still more in the circle and mound of the aborigines upon which Circleville had five years before been built. He was also struck by the patriotism displayed in the signs at the taverns, which most commonly bore the names of Washington, Lafayette, Jackson, and other American heroes. Of Columbus, which had been selected as the future seat of government, we give Dr. Cotton's account in his own words : —

"It is of only three years' growth, and yet, strange to tell, it contains two hundred houses and seven hundred inhabitants. The streets are filled with stumps of trees and environed with woods, which give the town the appearance of having just emerged from the forest. The houses, generally, are small and indifferent, and, as the town was laid out on a large scale, considerably scattered. The people have been collected from every quarter, and having great diversity of habits and manners, of course, do not make the most agreeable company. An elegant state-house is here being erected,

about eighty feet square, constructed of brick, and finished with elegant white marble. One thing seems truly ridiculous. Inscriptions are set up over the doors on beautiful slabs of marble, taken from Joel Barlow's Columbiad, holding forth the detestable principles of the French Revolution. Another large building is likewise going up for the purpose of state offices. There is a state prison also, or, as it is here called, a penitentiary for convicts, though quite too small, one would be apt to judge, for that purpose."

From Columbus, Dr. Cotton returned by way of Athens, much disappointed at not finding the expected university, though it had been chartered fifteen years before. It was only an academy. The trustees were about to employ a professor of mathematics, and were talking of building a college one hundred and sixty-six feet in length, but when it would actually be erected was problematical. The president, an excellent man, was officiating as the parish minister.

As to schools, Dr. Cotton rated the state as deficient. There were academies in the principal towns, but schoolmasters in general met with little encouragement. The state of religion, like that of schools, was less favorable than he could have wished. But Dr. Cotton, it is to be observed, had come from the very centre of schools and churches. There were Presbyterian ministers in all the principal towns, and a few of the Congregationalists. The famous Lorenzo Dow, of no sect, was preaching through Ohio to crowded au-

diences. At Marietta he preached three times in the forenoon and twice in the afternoon, without hymn or prayer. The Methodists were numerous and widespread; they afforded a great privilege, the doctor thought, where no other worship was to be had, but often "productive of enthusiasm and delusion." Camp-meetings were held, usually for three or four days; the ministers, sometimes to the number of fifteen or twenty, holding forth in rotation. Bible societies also were forming. Of the north part of Ohio, Dr. Cotton says only that it was flat and marshy, and still called New Connecticut.

Three years later, in August, 1818, William Darby, the gazetteer, sailed up Lake Erie from Buffalo to Detroit, just too soon to witness the first trip of the Walk-in-the-Water, in that month. Approaching Ohio he found the settlements more rare, and the borders of the lake covered by a vast forest. Fairport, Painesville, and Cleveland are described as the only flourishing places he saw, but they made a fair show of stores, mills and machinery, besides wearing an airy and healthy appearance. Cleveland had also a bank and a printing-office, and from its direct line of communication with Pittsburgh and Detroit, was a place of consequence. Sandusky, then called Portland, and the now beautiful little city of Norwalk, had just been established. But in Huron County Judge Todd had opened the courts in 1815. At the east end of the Reserve, Warren

and Youngstown, from their proximity to Pittsburgh and the channels of commerce, had both acquired importance and were engaged in a contest for the county seat, which far outlasted the Trojan war in duration. Except these points, northern Ohio was wrapped in a commercial and political seclusion which really was not terminated until the opening of the great Hudson and Erie Canal. The most populous and flourishing part of the state at this time, it need hardly be added, was at the southwest, in the broad and fertile expanse of the Miami valley. Besides this immense agricultural back country, Cincinnati had great commercial advantages, from its position on the Ohio River, and the military and political influences in its favor. It was not until 1817, however, that Captain Shreve, with the steamer *Washington*, had effected such regular and stated passages between New Orleans and the Ohio as to overcome the terrible obstacles of the Mississippi, and "convince the despairing public that steamboat navigation would succeed on the Western rivers."

In 1820 Cincinnati had grown to an incorporated city, with a population between ten and eleven thousand in numbers. It was not only considerable in its commerce and manufactures, but also in numerous religious, literary, and benevolent institutions and enterprises, admirably described in the "Picture of Cincinnati," by Dr. Daniel Drake, published in 1815, a book which

gave a great impulse to the growth and fame of the city. What metropolitan airs it had now acquired may be inferred from the existence, among its establishments in 1820, of water-works, which supplied the city from the Ohio River, of four newspapers, a theatre, two museums, and a piano factory.

At the end of this second decade of the century Ohio numbered in the census 581,295 inhabitants. The name of "The Yankee State," which it had obtained at the West, sent abroad a general impression that the emigration from New England was large, but it was not so. The appellation was given by the Kentuckians and Virginians; it bore a hostile sense, and signified the deep-seated jealousy already felt by the Southern neighbors toward the free institutions on the north side of the Ohio. Nine tenths of the people were agricultural or pastoral, lands and cattle still being the chief wealth. But besides the diversity of origin, already explained, which has had a marked influence upon the character and history of the state, the position of Ohio had enabled her to receive and retain the flower of the emigration which was proceeding from all quarters to the Northwest, and thus she was favored with a larger proportion of intelligent and cultivated society than was drawn in later years to the frontier. There was not only the spontaneous hospitality and friendliness so common to the pioneers, but tourists at this early period were

charmed to find, at various points in Ohio, circles of polite and refined people living in plain houses and with but little expense or show. There were such incongruities as silver spoons, and even forks, not only in use, but manufactured in Ohio, in those days, as divers treasured relics prove. General Lafayette, DeWitt Clinton, and Bernhardt, the Duke of Saxe Weimar, visited Ohio in the years 1825-6, and all observed this early influence. Levasseur, the secretary of Lafayette, and writer of his tour, states that the general, in his astonishment at this new creation and the delicate attentions he received, exclaimed that Ohio was the eighth wonder of the world.

CHAPTER XIII.

PROGRESS.

FROM these beginnings to the present condition there is a long stride, in which but a few results or leading events can be taken into view as way-marks in the progress of the state.

The problem of development had become critical and interesting. Here was half a million people, with a superabundance of fertile lands and products absolutely free, dependent on their own labor, having but little money, and in a measure shut up. Thousands were pouring in, but the question was how to get their products out. A prodigious trade in driving cattle, horses, and hogs to the eastern market seemed possible after the war of 1812, but the bad roads and want of forage made it hazardous. The Rev. Timothy Flint, journeying to the West in November, 1815, encountered a drove of a thousand cattle and hogs in the Alleghany Mountains, "of an unnatural shagginess and roughness like wolves, and the drovers from Mad River were as untamed and wild in their looks as Crusoe's Man Friday." Commerce in the other direction, down the Mississippi, was subject to even greater perils. Steam

navigation was for years almost hopeless against the disasters of snags, bursting boilers, and inexperienced engineers and pilots.

But the difficulty of the situation brought forth measures which created the era of Ohio's great growth and prosperity. New York, as we have seen, had invited Ohio in 1815, to join her in the scheme of connecting the Hudson with Lake Erie. In December, 1816, another communication came from DeWitt Clinton, the president of the New York Canal Commission, urging the vital importance of the work to Ohio. Governor Brown, in a special message in 1819, argued forcibly in favor of a canal project by which Ohio might profit directly in the great work already commenced in New York. The assembly were so far aroused that they appointed commissioners to report whether a canal was practicable, but made it dependent upon the aid of Congress, and this caused another delay.

The subject of common schools was brought before the legislature about the same time by an exposure of the shameless squandering of the school lands, which, under cover of legislative proceedings, had been going on for seventeen years. Atwater, who was in the legislature in 1821 and one of the investigators, is authority for the statement that by this legislative trickery one senator contrived to get seven sections of the school lands into the clutches of himself and his family, and that the state lost, at a low estimate, a million

dollars. The assembly had treated the abuses with much the same indifference as it had shown upon the subject of roads and canals. The only attempt they had made at a school law was an act passed in January, 1821, permitting the profits from the lands to be applied to the erection of schoolhouses, but requiring the tuition to be paid by the people of the district.

At the session of 1821-22 a combination was formed in the assembly between the friends of canals and schools, and on the same day, January 31, 1822, two measures were adopted. One was an act appointing commissioners to report a route for a canal to connect Lake Erie with the Ohio River. The other was a resolution authorizing the governor to appoint commissioners to report a common-school system for the state. This canal commission, aided by engineers who had had experience in planning the New York and Erie work, were engaged three years in investigating and comparing four possible lines: one by way of the Maumee and Big Miami valleys; another through the valleys of the Sandusky and Scioto rivers; the third by the way of the Cuyahoga and Muskingum; and the fourth by Grand River and the Mahoning. In January, 1825, after every possible test, they recommended the two lines now known as the Ohio Canal and the Miami and Erie. Their report was adopted, and an act was passed by the assembly February 4, 1825, appointing a board of canal commissioners

to construct the Ohio Canal complete from Portsmouth to Cleveland, and that part of the Miami Canal located between Cincinnati and Dayton. Another board, styled commissioners of the canal fund, was established by the same act, to raise such loans as the canal commissioners might require. As an indication of the character and credit which the state by this energetic policy had acquired, the first sale of Ohio bonds, in 1825, was \$400,000, at the rate of $97\frac{1}{2}$ per cent., but all subsequent sales were at a premium.

The shout of joy and the blaze of illumination which went up from the hills and valleys of Ohio, as the news of this prompt action of the assembly traversed the state, was a jubilation such as never before had happened northwest of the Beautiful River. The 4th of July was selected as the day for the commencement of work on the Ohio Canal, and DeWitt Clinton, now governor of New York, was invited to strike the first shovel into its excavation. The Licking Summit, near Newark, was the place selected for the ceremony. Governor Clinton was greeted by Governor Morrow with a most happy allusion to his former exertions for the admission of Ohio into the Union, "in no small degree owing to his espousal of her cause" as a senator in Congress. Thomas Ewing, then growing to the prime of his strong intellect and fame, was the orator of the day. After this grand gala, Governor Clinton made a tour through southern Ohio, encouraging and confirming the

spirit of the people in the great work they had begun, and adding immensely to the success with which it was prosecuted.

The Miami Canal to Dayton was commenced in 1826. This and the Ohio Canal were completed in 1833, and the entire system finished in 1842, at a total cost of \$14,688,666.97. This comprehended 658 miles of canals proper, or 796 miles, if navigable slack water, feeders, side cuts, and reservoirs be reckoned.

The effect of these improvements upon the growth and prosperity of the state can hardly be exaggerated. They lifted Ohio as it were into a new sphere. They opened to her farmers and merchants the markets of the Ohio, the lakes, and New York. They enhanced the value of the lands as well as of the products. They opened intercourse with the northern and northwestern parts of the state, built up Cleveland, Toledo, Akron, Massillon, and many lesser marts, and thus tended to unite a long segregated people as well as to make them prosperous. They brought a large accession of population and capital, and gave the state a name and character throughout the country of which her sons justly began to be proud.

Of the later system of the railways, first introduced in Ohio in 1832, and the turnpike system into which the state was inveigled in 1837 by a statute known as the "plunder law," it is impracticable, and indeed unnecessary, to make more than this mention.

The advocates of common schools in the meanwhile had not been so successful, and perhaps not so wise. The commissioners appointed in 1822 made a report, and published it broadcast through the state. But it met with no favor in the next assembly. Many influential men opposed it. One objection was that the proposed school tax was not authorized by the Constitution. This was met and overthrown by the clause transmitted from the Ordinance, declaring that as religion, morality, and knowledge were essential to the government, "schools and the means of instruction shall forever be encouraged by legislative provision," and upon this single warrant the legislature, February 5, 1825, passed the first act establishing free schools in Ohio. But the tax of one mill on the dollar, which it authorized, was insufficient, and the schools conducted under these initial laws would perhaps have left no trace of their existence but for a passage in the "Tour of Lafayette in America" worth transcribing:—

"On the morning after his arrival in Cincinnati, in May, 1825," says the secretary, "the first honors which the general received at sunrise were from the boys and girls belonging to the public schools. Assembled to the number of six hundred, under the superintendence of their teachers, these children were ranged in the principal street, where they made the air echo with 'Welcome to Lafayette.' When the general appeared before them their young hands scattered flowers under his feet, and Dr. Ruter advancing delivered him an address in their name," etc.

The act of 1825 has been followed, from that time to the present, by statute upon statute, each fraught, as their authors fancied, with the latest and most advanced methods and ideas, but all so perishable and abortive that none but theorists and empiricists would seem to have had the field. This in some degree explains the hostility to public schools which so often breaks forth. The misfortune has been in attempting too much. Instead of accomplishing a few things thoroughly, the common schools have been overloaded with superfluities foreign to their purpose. The main abuse is in subordinating these invaluable institutions to private and eleemosynary interests instead of holding them sacredly to the public service and welfare. The other evil, consequent upon the first, is defective or inefficient instruction; too much stress upon percentages, and far too little upon manners and character. The result of the constant mutations is, that as a system little is left but the tax and a general supervision; the state virtually surrendering its schools to a thousand local influences over which it exerts little or no inspection or control. There is no normal school as a centre. Amid the differences in its thousands of fractured parts the people of the state are suffering the greatest inequalities in their schools. But with all their shortcomings the public schools have been a pillar of the state, and of priceless value to its people.

The colossal proportions to which they have

grown, and the work they are doing, will appear by a few gleanings from the commissioner's report for the year 1887. Out of a population of 3,198,062 (by the census of 1880) there were enrolled during the year in the public schools of Ohio 767,030 youths between the ages of five and twenty-one years; and of these 519,110, on an average, attended the year through, at 12,589 schoolhouses, and a total cost of \$9,909,812.12. The following table exhibits their studies, and clearly points out the dividing line between the schools and the great mass of the people :

Besides the immense subsidy for schools provided by Congress, it will not have been overlooked that two townships in the Ohio Company's purchase were set apart for a college, and one in the Miami purchase for the more humble lot of an academy; both, however, bloomed forth at an early period, under the imposing names, respectively, of the Ohio University, at Athens, and the Miami University, at Oxford. Some conception of the advance of Ohio upon these early lines in higher literature and the arts may be gained from the further statement in the commissioner's report, that in 1887 the state had ten universities

and nineteen colleges, with 2,378 students, male or female, and that 313 were graduated during the year. The import of these high-sounding names and numbers is seriously marred, however, by a statement, said to be authentic, that more than a hundred and fifty students from Ohio were to be found at the same time in the colleges of the Eastern states.

In noting this development of literary and scientific culture in Ohio, it would be ungracious not to give her the meed of honor for having built and established the first regularly equipped public astronomical observatory in the United States. It was founded chiefly by the enthusiasm and efforts of Professor Ormsby M. Mitchell, and the corner-stone was laid in November, 1842, by the ex-president, John Quincy Adams. It has been surpassed by observatories of later foundation, but it is nevertheless entitled to this precedence in history.

The great donations of lands for school purposes made by Congress to this and other Western states had naturally been regarded by the country as a mere largess. But in Ohio they were by no means accepted in that light. Resolutions were adopted by the legislature of Maryland, about the year 1820, asserting a claim for similar appropriations of lands to the original states for the support of schools. This led to a spirited response by the legislature of Ohio, in January, 1822, of much historical interest, in

which it was shown that by the enhanced prices exacted by the United States from the purchasers of the other thirty-one sections, in each township, in consideration of the dedication of section sixteen, the gift had been repaid ten times over.

This session of the assembly, which gave an impulse to the canals and schools, seems to have been possessed of a militant spirit. Retaliatory measures were adopted against New York for enforcing on Lake Erie the law of 1808, by which the exclusive navigation of her waters by steam had been granted to Livingston and Fulton. But this monopoly was soon afterwards defeated by a judgment of the Supreme Court of the United States.

Another conflict in which Ohio became involved, in 1835, with the high powers of Michigan Territory, was near being tragical. An important portion of the state was involved, and it has been so much misunderstood on both sides that a brief explanation, taken from the report of a committee of Congress, may be offered.

In the enabling act for admitting Ohio into the Union, the north boundary proposed by Congress was the east and west line through the south extreme of Lake Michigan mentioned in the Ordinance of 1787. On Mitchell's map, which then was the government standard, this extreme of Lake Michigan was laid down as in latitude forty-two degrees and twenty minutes north. But the east and west line was not fixed as the boun-

dary. On the contrary, liberty was expressly reserved by Congress in the act to annex the territory north of it to Ohio, or dispose of it in any other manner conforming with the Ordinance. Meanwhile it was to be part of Indiana Territory. The convention which formed the Constitution of Ohio had information which led them to insert in it a proviso that in case Lake Michigan should be found to extend so far south that this east and west line intersected Lake Erie east of the mouth of the Maumee River or Bay, then, with the assent of Congress, the north boundary of Ohio should be in a line to be drawn from the south extremity of Lake Michigan to the North Cape at the mouth of the Maumee. The Constitution was accepted by Congress, and upon it Ohio became a state. But as the country was occupied by Indians, no attention was then given to the boundary.

In January, 1805, Michigan Territory was set apart from Indiana Territory and the east and west line through the head of Lake Michigan was the dividing line. But when Indiana was admitted as a state in 1816, her north boundary was established ten miles north of the Michigan line; and the north boundary of Illinois, when admitted in 1818, was established more than fifty miles north of the line through the head of Lake Michigan. The act, moreover, declared that the residue of Michigan Territory north of Indiana was to remain subject to the disposal of Congress.

This was decisive that the east and west line referred to in the Ordinance was not considered by Congress as restricting the north boundary of the three states on the Ohio River ; secondly, that the territory of Michigan was still at the disposal of Congress for the purpose contemplated, if not pledged in the Ohio Enabling Act and Constitution.

Repeated applications were made to Congress by the Ohio assembly to settle the boundary, and various surveys were executed. By an act of Congress, in May, 1812, the surveyor-general was directed to cause a survey of the east and west line as soon as the Indians would permit it, and to report a plat showing where it intersected Lake Erie. Mr. Harris, a deputy, was sent to survey this line in 1817, but, unduly magnifying his office, he proceeded to run the "north boundary line of Ohio," as he styled it, on the course from the North Cape of Maumee Bay to the head of Lake Michigan. This was called the "Harris line." But since it was not in compliance with the order of Congress, another deputy, John A. Fulton, executed the survey in 1818, and ascertained that the line in question, if extended due east, crossed the Maumee some miles above Toledo, and intersected the shore of Lake Erie considerably east and south of the Maumee Bay. This was the "Fulton line," so called.

Another survey, ordered by Congress in July, 1832, was executed by Captain A. Talcott, of the

engineers. By astronomical observations, as well as by surveys made with great accuracy in 1833 and 1834, he ascertained that the south extreme of Lake Michigan was in latitude 41 degrees, 37 minutes, and 7 seconds north; and that this line, produced due east, crossed the Maumee and intersected Lake Erie very nearly as reported by Fulton. He found, also, that the most southerly bend in Lake Erie (near Huron) is in latitude 41 degrees and 23 minutes north; and the middle of the lake, between this and Point Pelee, opposite, is 41 degrees, 38 minutes, and 21 seconds north.

Thus the north boundary of Ohio, extended literally as proposed in the enabling act, would cut off not only Toledo and the north range of townships in Lucas, Fulton, and Williams counties, but, passing south of the boundary lines between the United States and Canada, would have taken off a part of Ashtabula, all of Lake, and portions of Geauga and Cuyahoga counties.

Obviously, therefore, her right to have the consent of Congress to the change stipulated in the Constitution was irresistible, notwithstanding the dictum of Mr. John Q. Adams. But it is equally obvious that without the consent of Congress the right was imperfect. The question stood simply between the United States and Ohio, and upon that footing; and there was no doubt that Congress, on receiving Captain Talcott's report, would consent.

Before this could be accomplished, there was a rupture, in December, 1834. The legislative council of Michigan, with the same lofty idea of their functions as that held by Mr. Harris the surveyor, instructed their acting governor, Stevens Thompson Mason, an ardent young Virginian, to appoint commissioners to treat in behalf of Michigan with the three states of Ohio, Indiana, and Illinois for an adjustment and final settlement of their north boundaries. Governor Lucas of Ohio, to whom this was formally communicated by Mason, instead of referring it to the President as an act of foolish arrogance, saw fit to make a similar blunder, and sent the papers to the general assembly of Ohio, then in session, with a message advising that prompt and effective measures be taken for extending the jurisdiction of Ohio up to the "boundary specified in her constitution." The legislature, sharing in the same spirit, passed laws accordingly, February 23, 1835, with a preamble not only hurling defiance at Michigan, but giving the United States to understand that it "ill becomes a million of freemen to humbly petition, year after year, for what justly belongs to them and is completely within their own control."

Michigan, however, had not waited for this fulmination of the Ohio assembly. Her fiery young governor no sooner saw the message of Governor Lucas than he ordered out General Brown and the militia to resist the Buckeye in-

vasion. The council passed a law prohibiting the exercise or abetting of any foreign jurisdiction within the limits of Michigan, under peril of fine and imprisonment. A party of Ohio commissioners, peaceably re-surveying and marking the "Harris line," in April, were routed and their surveyors and assistants captured by General Brown and committed to jail. The judge and officers of an Ohio court appointed to be held at Toledo, September 1, were likewise arrested by an armed force. The President (General Jackson), in a spirit somewhat new to his character, was gently remonstrating with both parties all through the summer. Governor Mason, by an act of disrespect, however, aroused his more natural mood, and was summarily dismissed from office. The "tempest in a tea-pot" gradually subsided. Congress met, and by an act passed June 13, 1836, confirmed the boundary which Ohio had claimed, and admitted Michigan as a state upon the express condition that she yielded the point.

The annexation of Texas in 1846 brought on the war with Mexico. It was to have been a "bloodless achievement." But the President, by a transcendent stretch of power, ordered General Zachary Taylor to occupy the left bank of the Rio Grande. The Mexican generals fell upon the little army, tempted by its inferiority in quantity, but in two vigorous assaults were foiled and defeated by its superiority in quality. The

President announced to Congress that "war existed," and fifty thousand volunteers and ten million dollars were promptly voted to sustain him. Twenty thousand volunteers were called out, and a quota of three thousand assigned to Ohio.

Forty companies reported at Camp Washington, near Cincinnati; thirty were accepted and formed into three regiments, which under Colonels Alexander M. Mitchell, George W. Morgan, and Samuel R. Curtis, embarked and joined General Taylor, on the Rio Grande, in July. In the following year some additional battalions were raised in Ohio, the whole number sent by her to Mexico being 5,536, rank and file. Mitchell's regiment, the only one in battle, took a distinguished part in the storming of Monterey, and lost severely in killed and wounded.

The great loss of Ohio was in the death of Brigadier-General Thomas L. Hamer, a man of strength, influence, and character, surpassed by none of his contemporaries. As a representative in Congress he had sustained the administration in its Texan policy, and on the call for volunteers he enlisted at once as a private. He soon received a commission as brigadier-general, and how well he bore it is best told in General Taylor's own words:—

CAMP NEAR MONTEREY, *December 31, 1846.*

SIR: It becomes my melancholy duty to report the death of Brigadier-General Hamer, of the volunteer service, who expired last evening after a short illness.

The order to the army announcing this sudden dispensation expresses but feebly the high estimation in which the deceased was held by all who knew him. In council I found him clear and judicious, and in the administration of his command, though kind, yet always impartial and just. He was an active participant in the operations before Monterey, and since had commanded the Volunteer division. His loss to the army at this time cannot be supplied, and the experience which he daily acquired in a new profession rendered his services continually more valuable. I had looked forward with confidence to the benefit of his abilities and judgment in the service which yet lies before us, and feel most sensibly the privation.

I am, sir, very respectfully, your obedient servant,

Z. TAYLOR,

Major-General U. S. A.

The Adjutant-General, Washington, D. C.

Unimportant as this war in itself was for Ohio, it produced an upheaval of the state in its consequences. The annexation of Texas had excited profound distrust and alarm. The change of base made by the nomination of General Taylor by the Whigs, as their candidate for the presidency, brought about a schism which for years had been avoided. From that time the cloud, "no bigger than a man's hand," grew and darkened the country until the culmination of the storm at Mr. Lincoln's election.

The history of the change in public opinion which now took place in Ohio is a curious one. Just when or how the anti-slavery temper became

thoroughly aroused, has not been accurately traced. Ohio, politically, had been antagonistic to slavery from the beginning. This appears not only in her constant adhesion to the Ordinance of 1787 in every attempt to suspend or qualify it, but her senators and representatives in Congress were on various occasions, notably in January, 1820, during the Missouri controversy, urged to the utmost exertions to prevent the introduction of slavery into any of the territories or into any new state thereafter admitted into the Union.

But oddly associated with this fixed principle, all along from the territorial period down to a time somewhere between 1830 and 1836, there had been a certain tacit tolerance of slavery by the people of the state, so that Southern slave-owners visiting Ohio, or traveling through, were accompanied by their servants, without question, and by a sort of common concession of right. Numbers of slaves, as many as two thousand it was sometimes supposed, were hired in southern Ohio from Virginia and Kentucky, chiefly by farmers.

But during the five years preceding 1840 all this had ceased, and slaves who were brought into the state were not only enticed away, or discharged by writs of *habeas corpus* procured in their names, but numbers were abducted from the slave states and concealed or smuggled by the "underground railroad" into Canada. The

"abolitionists," as they were indiscriminately called, had become fanatical and lawless in their delirium of conscience, while rioters and mobs took equal pleasure in affording them opportunity for martyrdom.

About the year 1842 the struggle assumed a different phase. The extreme abolitionists, such as Messrs. Birney, Garrison, Lovejoy, and Abby Kelly, were abandoned, and the Liberty party formed, better known as Free-Soilers, of whom Mr. Chase, a Whig in 1841, was an early leader. They renounced all pretensions of abolishing slavery in the states where it was already fixed, but would "draw a ring of fire around them" impassable by a slave.

This was the party which sorely tried Ohio, and taxed the utmost strategy of the Whig leaders, who found themselves no longer contending with the blind fury of the abolitionists, but with the political sagacity of men taunted and enraged by the manifest intention of the slave states to reverse the original policy of the Union. It was the tact and influence of men like Messrs. Giddings and Wade, in counteracting Mr. Chase and his associates, that had enabled the Whig party in Ohio to keep the question of slavery so long out of politics; but by the choice of General Taylor the dikes were swept away. The California intrigues and then the Kansas-Nebraska plots helped to swell the flood, and in the war which ensued slavery was forever engulfed. This super-

ficial glance will serve to explain the attitude in which Ohio was found when the war broke out.

Before turning to that subject, it is worthy of notice that in all the growth and prosperity of Ohio in population, public works, material wealth, and other achievements of her people, there was nothing more conspicuous than the humanity displayed in her wide circle of benevolent institutions. As early as 1827 an institution for educating deaf and dumb people was incorporated. In 1831 it was adopted, and has ever since been maintained by the state. In 1837 a similar establishment for instructing the blind was founded, and in the following year an asylum for the insane.

Without attempting to follow out the gradual development of the system, we may observe that the state now sustains six spacious asylums at various points for the relief of the insane, besides a seventh conducted by contract, and an "Institution for feeble-minded youth;" also separate institutions for the Deaf and Dumb and the Blind, a Working Home for the Blind, a Boys' Industrial School, a Girls' Industrial Home, a Home for the Orphans of Ohio Soldiers and Sailors (Xenia), and is erecting an Ohio Soldiers' and Sailors' Home (Sandusky). The sum appropriated by the state for all these objects for the year 1888 is \$1,519,764.30, of which \$966,348.70 goes to the asylums for the insane, and

\$114,462.03 to that for "feeble-minded youth." To the casual observer, such statistics indicate a surprising proportion of mental disease or aberration for a people where the conditions of life are so easy as in Ohio.

CHAPTER XIV.

OHIO IN THE WAR FOR THE UNION.¹

THE assault on Fort Sumter found the legislature of Ohio meditating plans for reconciliation and compromise. On the 16th of April, 1861, within twenty-four hours after the President's call for 75,000 troops, the Senate, with but one dissentient, passed a bill appropriating one million dollars for military purposes; and on the next day, with but eight votes in the negative, ratified the Corwin amendment of the Constitution of the United States, which was designed forever to protect slavery in the states against every form of interference by the national government. These proceedings marked the end of concession and the beginning of war.

In the House of Representatives, after a delay of two days, the million bill passed by a unanimous vote. For the time, party lines had disappeared in the legislature and among the people. The succeeding thirty days of the session were

¹ For this chapter the author of the volume is mainly indebted to two or three military friends, Colonel D. W. McClung especially. Their thorough acquaintance with the subject, it is hoped, will give it value.

devoted to war legislation, and at the adjournment the state was on a war footing. Laws were enacted defining and punishing treason against the state, guarding against the shipment of arms and supplies to rebels, organizing the militia of the state, and regulating war contracts and purchases.

Instead of thirteen regiments assigned to Ohio under the first call for troops, enough volunteers had offered their services before the rush could be arrested to make seventy regiments or more. The legislature authorized the governor to accept ten additional regiments, to be equipped and paid by the state and employed in her defense.

On the morning of April 19th, the first and second regiments, without arms, uniforms, or accoutrements, were dispatched by rail to Washington. The remaining eleven regiments enlisted for the national service were assembled at Camp Dennison, sixteen miles northeast of Cincinnati, which as early as April 20th had been selected by the governor as a camp of instruction. It was soon after accepted by the national authorities, and its use was continued in various forms until the close of the war.

As soon, almost, as the work had begun, the state rang with clamorous complaints, most of which grew out of the impatience of a people suddenly thrust out of the ways of peace, and called upon to make preparation for a gigantic war. The complaints which were founded arose from the

inexperience of officials, and an insatiable demand for everything, when nothing was at hand. At the height of the ferment, the House of Representatives, by resolution, called upon the governor to dismiss the most important members of his staff for incompetency, though no one suggested that it was possible to find more capable or experienced men. As soon as the skill and intelligence of the people had time to rally, order appeared, supplies were found in sufficient quantity, their distribution was prompt and effective, and thereafter complaints were rare.

Governor Dennison, setting aside his original preference for Irvin McDowell, appointed George B. McClellan to command the Ohio troops, with the rank of major-general; and Jacob D. Cox, Joshua H. Bates, and Newton Schleich, brigadiers-general. Within a few days the governor urged the President to appoint General McClellan the ranking major-general of volunteers, saying, "Ohio must lead throughout the war." The President responded by appointing him a major-general in the United States army. He soon became commander of a department stretching from the Mississippi to the Alleghany Mountains, then commander of the most important of the national armies, and disappears from the history of the state to become a conspicuous figure in national history.

The position of the state between foreign territory on the north, and four hundred miles of

slave territory on the south, caused immediate apprehension for her safety. In both Virginia and Kentucky the people seemed to be drifting into the rebellion, and both states were a menace to Ohio. Governor Dennison's first care was to guard the frontier. The entire armed militia of the state was stationed so as to be quickly available. At his request the department of General McClellan was enlarged so as to include Western Virginia. Early in May, the governor was urging the general to cross the Ohio River into that position, which, in a military sense, was the "most offensive" region claimed by the rebellion. But the general manifested his constitutional tendency to extreme caution, and required more men, delay, preparation. On the 20th of May, the rebel forces had reached Grafton. The loyal people of Western Virginia were crying out for protection, and the Secretary of War joined the governor in demanding action. On the 26th of May the Ohio militia was turned over to the general and ordered into Virginia. Within twelve hours after McClellan's compliance they were in motion. One column entered the state at Parkersburg, the other at Wheeling. The two met at Grafton, and in a few days cleared Western Virginia of hostile forces. That portion of Virginia was never regained by the rebellion, and the southeastern border of Ohio had rest.

The people of Kentucky, reluctant to join the rebellion, unwilling to support the government,

stood hesitating while the active secessionists among them pushed their schemes with reckless zeal. The governor's insolent refusal to furnish troops, and his proclamation of neutrality, which placed the legitimate government on a level with the rebellion for the time, fairly set forth the attitude of the state. It was a mere fortification behind which the enemy could conceal his preparation and mask his movements. Governor Dennison insisted that no flaxen theories could long hold in the flames of war, and that the Kentucky problem should be settled at once by the seizure of all the strategic points in the state. The soundness of his judgment was vindicated in both cases: in the one, by the permanent advantage from accepting it; in the other, by the evil consequences of the rejection.

The Ohio regiments, from the 3d to the 13th inclusive, were not sent to the field under their three months' organization. In May and June they were reorganized by enlistment for three years. As reorganized, they departed for active duty, and on the 9th of July the last of the eleven regiments left the state. The aggregate strength was 10,353 men; an average of nine hundred and forty-one to a regiment, which remained to the end of the war very nearly the average initial strength of the Ohio regiments.

In July the ten regiments of state militia returned from the campaign in Western Virginia. The arrangement to have them mustered and

paid by the United States government was not carried out, and they dispersed to their homes dissatisfied, to give a serious though temporary check to the volunteer spirit.

On the 22d of July, President Lincoln, responding to the disaster at Bull Run, called for 500,000 volunteers for three years; the quota assigned to Ohio being 67,365, or more than one eighth of the entire army. If the proportion seems unduly large, it is to be explained by the fact that the border states could not then be depended upon, and that the states in rebellion, the territories, and the Pacific slope were never included, then or afterwards, in the basis for military estimates. These portions of the country afterward furnished more than a quarter of a million men.

In Ohio the work of organization was pushed so energetically that at the close of 1861 the governor could report that 77,845 soldiers had enlisted for three years; that forty-six regiments of infantry, four regiments of cavalry, and twelve batteries of artillery were already in the field; that twenty-two regiments of infantry and four regiments of cavalry were full, or nearly so; and that thirteen regiments were in progress. This amazing result, achieved within six months after the President's call, amid the gloom that overspread the land from the disaster of Bull Run, is proof alike of the efficiency of the state authorities and of the resolute patriotism of the people of Ohio.

Meanwhile Governor Dennison's staff had been entirely changed, the original members, with one exception, having taken commissions in the army, where all of them did honorable service, a fact that seems to call in question the hasty opinion of the House of Representatives. In the new organization, C. P. Buckingham became adjutant-general, Geo. B. Wright quartermaster-general, Columbus Delano commissary-general, and C. P. Walcott judge-advocate-general. All were men of strong character, and efficient in their several stations.

General Buckingham, a man of sound judgment, even temper, methodical habits, and purest motives, was one of the few citizens of the state who, like Rosecrans, Whittlesey, and Sill, had the advantage of a thorough military education, and whose services at the outbreak of the war were of inestimable value.

The governor uttered no word of complaint or resentment under the fierce and unjust criticism which had fallen upon him, but with unchanged courtliness of manner, calmly wrought, night and day, to bring about the great result that was to save his country and be his own vindication. The people were slow to render him justice, because to approve him was to condemn themselves. He was not renominated, partly for the reasons intimated, and also for reasons of party expediency. As he had been a Whig and a Republican, it was deemed expedient to recog-

nize the large and patriotic element in the Democratic party which had rallied to the support of the government. The nomination was given to David Tod, of Mahoning County, a lifelong Democrat, a successful man of business, a prominent leader of his party, and a man of strong convictions and settled purpose. The opposing candidate was Hugh J. Jewett. The Democratic party contented itself with the attitude of an opposition to the administration in power. Nevertheless, Tod, who represented an unqualified support of the administration, was elected by a majority of fifty-five thousand. He was inaugurated on the first Monday in January, 1862. He retained the staff of Governor Dennison, as far as possible. Walcott had been appointed assistant secretary of war, and Luther Day was appointed judge-advocate-general. In April, 1862, Buckingham was called to the war department, and Charles W. Hill became adjutant-general.

The regiments remaining in the state were rapidly mustered and sent to duty. Within three months twenty-seven additional regiments of infantry and one of cavalry were turned over to the national government. Since the state had more than filled her quota of troops, recruiting was not at that time urged. But immediately another great work — a work of humanity such as no people ever before performed — enlisted the sympathy and taxed the liberality of the state and her men and women. Until the spring of

1862 the campaigns had been almost bloodless. The battle of Pittsburgh Landing, with its long list of wounded, and the sudden increase of sickness caused by exposure, aroused the people to the necessity for other relief than that afforded by the government. News of the battle reached the state April 9th. Within twenty-four hours three steamboats bearing hospital supplies, physicians, and nurses were on their way to the battlefield. This was the beginning of that splendid series of popular efforts to relieve the horrors of war, which was renewed in every emergency and continued to the end.

After each battle there was the same urgency in hurrying to the scene of suffering with special means of relief.

During the year 1862 the state paid more than fifty thousand dollars for steamboats, physicians, and nurses to meet emergencies. The cities of the state out of their treasuries, and the people by private contributions, expended more than an equal amount. About the same time the state authorities inaugurated a system of agents and agencies to give succor to soldiers at all convenient points, to communicate important information, to visit camps and hospitals, and to perform any service that might cheer the soldiers or remind them that they were not neglected or forgotten.

In May of this year, in consequence of an alarm for the safety of the national capital, Gov.

ernor Tod called for volunteers to serve for three months. Within three days five thousand assembled at Camp Chase, near Columbus. They were hurriedly formed into regiments, three of which were dispatched eastward, and the other two assigned to guard duty at the Camp Chase prison, relieving an equal number of disciplined troops. The incident is noteworthy as showing the spirit of the people, and the great resources not yet employed.

Under date of July 2d, the second great call for three years' volunteers was issued, 300,000 men; the number assigned to Ohio being 36,858. Still her quota was one eighth. Under the call of July 22, 1861, she had furnished 84,116 men, instead of her quota of 67,365, — an excess of 16,751, which had passed to her credit. August 4th another call was issued for 300,000 to serve for nine months, but wisely enough Ohio did not organize a single regiment.

At this time, if not earlier, began the deplorable error, both in military principle and statesmanship, of depending upon volunteer enlistments, stimulated by bounties and threats of a draft, a blunder which worked increasing evil until the close of the war. The earlier calls for volunteers, justified by the great emergency, had hurried to the field, in large measure, the intelligent, patriotic, and public-spirited young men. The class who, of all others, are most to be prized were sent to death, while a want of enter-

prise, or of patriotism, or of courage, became the very means of exemption from bearing the burden of citizenship. Though Congress had made all necessary legal provision for a conscription by classes, "the uniform and just tax upon the physical strength of a nation," yet the executive authorities failed to rise to the height of the great argument, and a supreme opportunity was lost.

Thirty-nine additional regiments were projected; the state was divided into districts, one or more regiments assigned to each, and the military committees in each county were pressed to diligent effort. The draft somehow had assumed the shape of a calamity or a shame, but it was held as a rod over every county and township. Enrolling officers were everywhere busy making lists of all citizens within the military age. Before the end of August, twenty regiments had been sent out of the state, but the quota was not filled. The draft was postponed until October. The threatened invasion of the state by Kirby Smith, and a like menace from Virginia, tended to quicken the work of recruiting.

The evils of the system became more apparent. Aside from the undue burden imposed upon the patriotic, it created new regiments instead of reinforcing the disciplined and veteran organizations in the field, in which a raw recruit soon became a soldier. The volunteer had a choice of regiments, and he usually chose that one to which

he was urged by an officer whose zeal was stimulated by a commission contingent upon success in recruiting. The army in the field was likely to become an army on paper. Nevertheless, the state officers did all they could to counteract the tendency, and at the close of the year they estimated that nearly twenty-five thousand men had gone to the front to be incorporated with veteran organizations, to become veterans at once.

On the 1st of October it appeared that the enrolled militia of the state numbered 425,147; the number of volunteers to September 1st was 151,301, and the draft was ordered for the deficiency of 12,251. The result was as might have been expected. Of those drafted more than four thousand, either in person or by substitute, volunteered, thus getting their choice of regiments; nearly three thousand, for one or another reason, were discharged; nearly two thousand ran away; and less than twenty-five hundred went to replenish the wasted ranks of veteran regiments.

In July of this year, great alarm was caused in Cincinnati by the rapid and almost unopposed movements in central Kentucky, for a period of ten days, of a thousand rebels under John Morgan. The Cincinnati police force, under the command of its chief, with a single piece of artillery, was sent against the enemy. The net result was that the disorderly elements in Cincinnati became riotous, and the piece of artillery, with its squad, was captured, not, however, without a

creditable defense. In August and September came the real movement, the occupation of Kentucky by the army of General Bragg, one column under Kirby Smith threatening Cincinnati. The danger became fully apparent on Monday, August 31st. The city council of Cincinnati met and pledged the city to meet all necessary expense. The governor issued his proclamation calling for volunteer militia. Martial law was proclaimed on Tuesday, September 1st, and the whole population was put to military duty. A broad pontoon bridge, constructed by using coal barges for floats, was thrown across the Ohio River in one night, and the work of defense was pushed with the utmost vigor. The picturesque, irregular militia from the state came pouring into the city, and continued until turned back five days afterwards by order of the governor. More than fifteen thousand had already assembled in the defense of Cincinnati. On September 5th the enemy appeared, but for military reasons, or because the city was too strongly defended to be taken by hurried assault, they made no attack, and time had been gained for more orderly and systematic resistance. The enemy disappeared September 12th, leaving nothing but an impressive warning of the necessity for better state defenses.

During the summer and autumn of 1862 there were unmistakable signs that popular enthusiasm had cooled. Outspoken opposition to the war was

not uncommon. A few citizens were arrested by order of Governor Tod and sent to military prisons for seditious utterances. At the election held in October, fourteen Congressmen of the Democratic party were chosen, and but five Republicans; and the Democratic state ticket received a majority of nearly six thousand, against a Republican majority the previous year of fifty-five thousand. The Republican vote had fallen off twenty-eight thousand, and the Democratic vote had increased thirty-two thousand. This result may in part be attributed to the withdrawal of voters to recruit the armies, the legislature not having at this time enacted the law giving soldiers in the field the right to vote. The discouraging year of 1862 closed with the appalling disaster at Fredericksburg. The legislature of the state gave no signs of weakness. The thanks of the state were tendered to officers and soldiers who had achieved any success. Laws were enacted to allow the soldiers to vote, and to secure a better defense of the state. Everything that was done looked toward a vigorous prosecution of the war. Evidences of popular discontent became clearer. Violent resistance to the national authority was offered in March, 1863, by citizens of Noble County. In May, C. L. Vallandigham was tried by a military commission and sent across the lines. His arrest was followed by a violent outbreak at Dayton, in which the "Journal" office was sacked and several buildings burned. In June, further resistance

to authority broke out in Holmes County. All these disturbances were quickly suppressed, without serious conflict or loss of life. That they were contemptible appeared from the ease with which they were suppressed.

Following closely upon these indications of disaffection, came an invasion of rebel cavalry under John Morgan. They entered the state at Harrison, in Hamilton County, July 13th, and during the following night passed eastward on a line twelve miles north of Cincinnati. On the same day General Judah arrived at Cincinnati by steamboats with his division of cavalry. As General Hobson with a division of cavalry was following Morgan closely, it would have been easy for General Burnside to bring Morgan to battle in Hamilton County. But he purposely avoided forcing a battle in the suburbs of a large city, and waited an opportunity to destroy the invaders without such peril to life and property. In response to the governor's proclamation, the militia of the state everywhere flew to arms; but Morgan's march had become a mere race for safety, and he avoided everything that might cause him delay even for an hour. His line of march lay through the counties of Hamilton, Clermont, Brown, Adams, Pike, Jackson, Vinton, Athens, Gallia, and Meigs. After reaching the hill country beyond the Scioto River, the attacks made by the militia became annoying to him. Fifty thousand men were under arms and eager

to take part in the hunt. At eight o'clock on the evening of July 18th the fleeing enemy reached Portland, opposite Buffington Island, the point selected for fording the Ohio River. But the ford was defended, the night pitch-dark, and delay until morning was necessary.

During the night the commands of both Judah and Hobson came up, the gunboats commanded the ford, and crossing was impossible. The skirmish known as the battle of Buffington Island was fought, resulting in the capture of seven hundred of Morgan's men and a number of his most important officers. In this skirmish Major Daniel McCook, who accompanied Judah's command as a volunteer, was killed. He was a paymaster of volunteers, past sixty years old, with white hair, but erect, and full of the enthusiasm of youth. He was the father of Generals A. McD. McCook, Robert L. McCook, and Colonel Daniel McCook. This family was not more remarkable for the number of its fighting-men than for the number of its members who fell in the war. Every summer exacted its toll of blood. In July, 1861, the youngest son was killed at Bull Run. Robert was killed in Tennessee in July, 1862; the father fell at Buffington Island in July, 1863; and Daniel was mortally wounded at Kennesaw in July, 1864.

The remnant of Morgan's command turned toward the interior, crossed the Muskingum River above McConnellsville, fled through the counties

of Morgan, Guernsey, Harrison, and Jefferson, and was finally captured, July 26th, near Salineville in Columbiana. A committee appointed under an act of the legislature passed March 30, 1864, reported the losses from the Morgan raid as follows: By acts of the enemy, \$428,168; by the state and national forces, \$148,057: a total of \$576,225 inflicted upon the people of the state, — a less amount than the loss by the burning of the single city of Chambersburg.

The political campaign of 1868 in Ohio is memorable not only in the history of the state, but in the history of the war, and almost ranks in importance with the battle of Gettysburg or the capture of Vicksburg. The nomination of Vallandigham, on the 11th of June, was a defiant challenge to the war sentiment of the state, and nothing more was wanting to force a campaign of unwonted heat and bitterness. As the administration of Governor Tod had been efficient and fairly popular, his renomination had been expected; but while the Democratic convention with furious enthusiasm was nominating Vallandigham, John Brough was addressing a mass meeting at Marietta, in a speech of great force, in favor of a determined and relentless prosecution of the war. In years past he had been a powerful Democratic leader. He was widely known for his integrity and ability in public affairs, and, having been out of politics for fifteen years, was free from the jealousies and animosities which gather about an

active public career. He at once became a popular favorite, and when the Republican convention met, June 17th, he had a handsome majority of the delegates. The convention declared for the prosecution of the war, and refused to consider any other question. Within three weeks after these nominations, the victories at Gettysburg, Vicksburg, and Helena had carried the war past the critical point. The nation watched the contest in Ohio with intense interest. The result was a surprise to all. Brough had a majority in the home vote of 61,920 and in the soldier vote of 39,179, or a total of 101,099. The magnitude of the vote was no less suggestive. The Democratic vote had increased over the vote of the previous year by more than three thousand, and the Republican vote had increased almost 110,000, a total increase of 118,000. Probably not one half the soldiers voted, and yet the total vote of 475,868 was many thousands larger than any previous poll, and was not again equalled until the election of 1867.

During the winter of 1863-64 the reënlistment of veterans took place. Since their term had begun in 1861, it would end in 1864. More than 20,000 of them again responded to their country's call and enlisted for the war. Each veteran regiment was granted a furlough for thirty days as soon as reorganized. Returning to their homes in every part of the state, they became the heroes of the hour. Their example shamed the lag-

gards, encouraged the hopeful, and stimulated volunteering.

From the outbreak of the war, the want of an efficient military organization had been severely felt, but the immediate demand for men in the national armies had absorbed every energy of the state authorities. At the session of January, 1863, a law was enacted requiring the organization of the entire militia of the state, to be known as the Ohio Militia, with another and more select organization, to be armed, equipped, and made ready for military duty, to be called the Ohio Volunteer Militia. At the close of Governor Tod's administration, the organized militia numbered 167,572, and the volunteer militia 43,930. In addition to the time given to drill, these volunteers had borne the expense of their own uniforms, at a cost of nearly \$350,000. The retiring governor had the satisfaction of reporting that the state stood armed for her own defense, and had complied with every demand of the national government, having furnished 200,671 men.

Governor Brough was inaugurated January 11, 1864. In his address he discussed but one theme, and interpreted the recent election as merely the expression of the people not to "negotiate with rebels in arms, or admit anything from them but unconditional surrender and submission." He urgently recommended a more liberal public provision for the families of soldiers. He deprecated the dependence upon private charity as placing

an undue burden upon the liberal and patriotic, not honorable to the state, and offensive and humiliating to the soldiers. A law enacted in 1862 had required a levy of three fourths of a mill in the dollar for this purpose. The governor recommended three mills, and expressed his personal preference for a levy of four mills. The legislature, more cautious than the governor, fixed it at two mills, with power to the county commissioners to increase to three mills, and to city councils to add another half mill. As the assessed value of taxable property for 1864 was slightly in excess of one thousand million dollars, it will be seen that the state was not giving relief with a niggard hand. With increased needs, private liberality also increased. It is not possible to state the amount thus freely contributed; for charity vaunteth not itself. However, a few organizations for distributing the gifts of the people necessarily kept records and rendered accounts. Chief among these were the Cincinnati and Cleveland branches of the United States Sanitary Commission, which reported cash contributions of nearly a half million dollars, and supplies to a much larger amount. So generally was the vast work of receiving and distributing done gratuitously, that but one and a half per cent. of the contributions was expended between the giver and the receiver. Such a result was possible only because the telegraph lines and all common carriers were free to the use of the Sanitary Commission,

and many of the agents of the state gave their services without compensation. Soldiers' Homes were maintained at Cincinnati, Columbus, and Cleveland, where more than two hundred thousand soldiers, first and last, were comfortably lodged and fed. The work of relief was not discontinued until the reflux waves of war had settled to the calm level of peace. Nor was the work limited to Ohio soldiers. It embraced impartially all who served their country, and even her sick and wounded enemies. It was not a ministry for the state, but for a cause, and for humanity.

The governor, by personal attention and through the various executive agencies, supervised and enforced the proper use of relief funds raised by taxation, not neglecting, however, the application of the people's voluntary gifts. From the first it was evident that he was to impress his powerful personality upon the history of the state. Intensely in earnest, and of surpassing powers of endurance, he was unsparing of himself and of others. Indifferent to criticism and even abuse, he could not understand the sensitiveness which shrinks from savage reproof, or flames into indignation at blunt and unqualified denunciation. With a mind at once quick and comprehensive, and endowed with dauntless courage, he rarely failed to detect an error, never avoided a collision, and always spoke without refinement of phrase, or "meal in the mouth." In his public duties, Robert Morris was not more disinterested, Samuel Adams was not more zealous.

The system of recruiting by volunteers and bounties, with the draft held as a threat, continued with swiftly increasing evils. Governor Brough denounced it as a confession of weakness discreditable to the government, as an appeal to cupidity and not to patriotism, and warned the authorities and the public that enormous local debts were thereby growing up, to be a burden if paid, and a shame and calamity if repudiated. "The state swarmed with bounty-jumpers, bounty-brokers, and mercenaries of every description," and while the real soldiers received no proportionate assistance from all this profligate expenditure, their noble service was discredited by enforced association with disreputable methods and hireling comrades. But other states held to volunteering, the draft had been rendered unpopular, and the authorities at Washington were reluctant to apply force. The governor gained nothing by his vigorous effort except the vindication of his own courage and judgment.

With a view to ending this ruinous drain upon the people, Governor Brough devised the plan for adding a large reinforcement to the armies during the critical period of the campaign of 1864. At the beginning of his administration, measures had been taken to secure a more efficient organization of the militia. A bill drafted by Adjutant-General Cowen, with the assistance of Colonels L. A. Harris and John M. Connell, was promptly passed by the general assembly. The

name of the Volunteer Militia was changed to the "National Guard," and ample provision was made for all the necessary expenses of that organization by the collection of a commutation fee of four dollars per annum from each citizen of the state who was subject to military duty, and not a member of the guard or in the military service of the United States. The law went into effect immediately, and in a very short time the National Guard of Ohio became the best or most efficient military organization that any state possessed. This was soon demonstrated.

Upon Governor Brough's invitation, a conference of governors was held at Washington, and at its close, on the 21st of April, a tender signed by the governors of Ohio, Indiana, Illinois, and Iowa was made to the President, offering 85,000 soldiers for one hundred days' service; Ohio to furnish 30,000, Indiana and Illinois 20,000 each, Iowa 10,000, and Wisconsin 5,000. The offer was accepted April 23d, and on the same day Governor Brough telegraphed Adjutant-General B. R. Cowen to issue the necessary orders and put the machinery in motion. The adjutant-general was distinguished for executive ability, calm judgment, and resolute purpose. The order appeared in all the daily newspapers Monday morning, April 25th, commanding the National Guard to assemble May 2d, the place of rendezvous for each regiment to be fixed by the commander.

Notwithstanding the time appointed was the opening season of business, particularly of agricultural activity, the adjutant-general, on the second day of May, at six o'clock P. M., astounded the War Department with the despatch, "More than thirty thousand National Guards are in camp, ready for muster;" and at half past seven o'clock the reports from regimental commanders showed more than thirty-eight thousand. The War Department was taken aback, no adequate arrangements having been made for mustering such a multitude. Many members of these regiments had already entered the military service, and some organizations were thus reduced below the minimum, making consolidation necessary. All difficulties, however, were overcome, and on the 18th of May Governor Brough telegraphed the Secretary of War: "Ohio has sent four regiments to Baltimore, two to Cumberland, thirteen to Washington and a fourteenth to leave to-night, three to Parkersburgh, four to Charleston, three to New Creek, three to Harper's Ferry; has stationed one regiment at Gallipolis, two at Camp Dennison, two at Camp Chase, and two regiments and a battery at Johnson's Island, being forty regiments and one battalion." The whole work had been done within sixteen days.

The service performed by these regiments was not nominal. They guarded the prisons at Johnson's Island and Camp Chase, protected the Baltimore and Ohio Railroad, held the gateway to

western Virginia, and occupied the defenses of Baltimore and Washington. They formed the bulk of the army with which General Lew Wallace stubbornly resisted Early's advance upon the national capital. Some of them served in the campaign in the Shenandoah valley against Jubal Early, and others were at "the front" along the James River. Their losses were heavy, and some of them starved and died at Andersonville. For the time, they took the place of the same number of veteran troops.

During his administration Governor Tod had made promotions without any fixed rule, sometimes by seniority, sometimes disregarding rank in deference to supposed fitness. Characteristically, Governor Brough, by an order issued February 6, 1864, announced that all promotions would be by seniority in rank, except when drunkenness was proved; that opinions of commanding officers would not be regarded; and that incompetency and inefficiency must be dealt with, not by tolerating them in subordinate positions, but by driving them out of the army. His theory seemed to be, that if an officer was good enough to remain in the service he was good enough to receive promotion in due order, and if not fit for promotion he was not fit to remain in the army. The rule was distasteful to regimental commands, and led to much acrimonious correspondence.

The governor, with his accustomed energy and

fearlessness, and often with utter disregard of military order and discipline, hunted out and reprimanded shirks, with but little care for their feelings. His agents were everywhere, and he gave ready ear to complaints that came from them or from private soldiers, a practice that easily degenerated into meddling, and led to insubordination. In a few months he was engaged in a widespread controversy with army officers. They often were violent and disrespectful, and he never failed to hold his own in the vigor and asperity of his replies. He failed to see the distinction between the state and the United States service, and, unmindful that no man can serve two masters, insisted that every Ohio soldier was under his paternal care, and that every volunteer officer from his state was at all times liable to be called to account to him. As a necessary consequence, almost the entire army influence was leagued against him in a common quarrel. Some officers were dismissed from the service for disrespect shown him, for he was not a man in any wise to be rashly attacked or resisted. There was no way, however, for his enemies to reach him but to wait for his halting, which never came, or to thwart his ambition, for which no opportunity was given; for he had declined a renomination, and died on the 29th of August, 1865, half a year before his term expired. He was succeeded by Lieutenant-Governor Charles Anderson. Six weeks after the death of Governor Brough, Major-

General Jacob D. Cox, the most distinguished Ohio soldier who went into the war without military education or experience, was nominated as governor.

In another campaign, had Governor Brough survived, the discontent and altercations between him and the officers in the field would probably have forced the national government to take the organization of state troops generally into their own hands. These and similar misconceptions in other states, and the great mischief, not to say danger, incurred by the service, all point to the importance of speedy legislation by Congress, while experienced officers are living to aid in framing it, by which the militia of the states shall be organized, trained, and disciplined under the general and uniform system contemplated and provided for in the Constitution and in time of peace. Fortifications are not more important, either for war or insurrection. By such forecast the United States will not again be subjected to a waste of hundreds of millions of dollars in extemporizing a hasty system out of nothing.

Prior to January 1, 1864, the Ohio infantry regiments, from the 1st to the 128th, and all the cavalry and artillery organizations, had been sent to the field. All these, as well as the recruits from time to time sent to repair the waste of war, were enlisted for three years. The regiments from the 130th to the 172d, inclusive, were the one hundred days' reinforcement, made up of the National

Guard. Those from the 173d to the 197th were enlisted for one year, in 1864 and early in 1865, when it was expected that the rebellion would soon be subdued. Eleven of these regiments, from the 173d to 183d, were completed during 1864, and the others were rapidly filled up early in 1865. It had been confidently expected that the campaign of 1864 would end the war, but the country was amazed at the tenacity of the enemy after it was evident that no rational hope of success remained. The work of recruiting went steadily on, the last regiment having left the state a week after the surrender at Appomattox.

In August, 1864, the governor, in announcing arrangements for the second draft, had startled the public with a serious warning not to engage in any attempt at forcible resistance. Through detectives he had discovered a secret, oath-bound society, akin to the "Knights of the Golden Circle," which had been the controlling power in dragging some of the states into rebellion. As stated in the report of the adjutant-general, it numbered from eighty to one hundred and ten thousand members. It is not to be credited that such a number of citizens were consciously plotting rebellion and bloodshed. The vast majority, doubtless, were dupes, led into lodges through ignorance, or party zeal, or a desire for novelty. The authorities, however, took efficient precautions, and before the time fixed for the draft the National Guards returned to their homes, all bear-

ing their arms, and all in a spirit not lightly to be ruffled. Not a ripple disturbed the surface of society where the draft took place.

In this limited sketch no attempt can be made to trace the career of Ohio officers and soldiers beyond the confines of the state. On their entry into the national service they ceased to belong to Ohio. But it belongs to the history of the state to say that the most distinguished officers of the army were of Ohio birth or training, or both. The list includes Grant, Sherman, Sheridan, McPherson, Buell, Rosecrans, McDowell, Gilmore, Cox, besides many distinguished commanders of divisions and army corps. Ohio was hardly less conspicuous in the councils of the nation. She gave three members to the cabinet. In the Senate, Wade and Sherman were second to none in courage and position as statesmen. In the House of Representatives were Bingham, Shellabarger, Ashley, Schenck, Garfield, and Horton on the side of the administration; and Pendleton, S. S. Cox, and Vallandigham in the opposition: no state presented a stronger array than this. No better proof could be added of the worth of the pioneer stock of Ohio than that so many of their sons rose to leadership in the great crisis of the country's history. It is proof not only of inherited qualities, but of conscientious family training, the best characteristic of the Anglo-Saxon race.

These distinguished leaders were exponents of a people of like character and training, who gave

them prominence and sustained them by suffrage and sacrifice. In the unnamed mass, incapable of being singled out because of their numbers, there were also heroes and leaders. They it was who filled the ranks of the army, and kept their state a creditor and never a debtor upon any demand for men. It was they who moved in continuous column to the front until the rebellion was suppressed. They were called upon for 306,322 men; they responded with 319,659, and furnished more than a tenth of the entire army that vindicated the national power.

Ohio and her authorities, legislative and executive, kept pace with events throughout the war. The whole power of the state was at all times exerted to sustain the government. She exhibited no provincial jealousies or quibbles, and higgled at no price. She stood upon no constitutional precedents or refinements. Her motto was, Suppression of the rebellion first, everything else afterward. In giving her soldiers the right to participate in the elections while absent in the field, she allowed the utmost stretch of law, and indeed exceeded the line of safety, but it was that they might feel they were still her sons. Her provision for their families, also, was bountiful. She established soldiers' homes. Her agents were in every hospital, in every army and camp. They distributed her bounty; they acted in lieu of banks of exchange in sending the soldier's pay to his family; they watched for his coming at every available point.

Her soldiers formed part of every army, marched in every campaign, fought in every important battle from Bull Run to Bentonville, from Sabine Cross Roads to Gettysburg. Twenty-nine regiments and ten batteries were at the siege and capture of Vicksburg. Thirty-five regiments of infantry, three of cavalry, and seven batteries of artillery were in the Army of the Cumberland when it fought its way from Stone River to Atlanta. Nine regiments of infantry, two of cavalry, and a battery of artillery marched and fought under Sheridan in the Shenandoah valley. Forty-five regiments of infantry and two batteries of artillery were with Sherman in the Carolinas. Thirty-two regiments of infantry, seven batteries of artillery, and a regiment of cavalry helped at Nashville to finish the rebellion in the Mississippi valley. Forty-three of her regiments of infantry stormed Missionary Ridge. Twelve regiments of infantry, one of cavalry, and four batteries of artillery were on the decisive field of Gettysburg, and fifteen of her veteran regiments were in the army that assembled in Texas, after the collapse of the rebellion, for the ostensible purpose of admonishing a refractory people, but really to expedite the departure of the French intruders from Mexico.

The alacrity of the soldiers, and the energy of the authorities, in the final disbanding of the great army, has excited the wonder of the world. Before the close of the year of the total sur-

render, all but eight of the Ohio organizations had disappeared. In June and July, 1866, the 25th Infantry, Battery B of the First Artillery, and the 11th Cavalry, were mustered out of the service, the last of Ohio's volunteer army.

Exact numbers in stating the loss of life in the war will never be obtained, but approximations may now be made. Of the soldiers of Ohio, twelve thousand were killed or mortally wounded, one half left dead on the battlefield. According to the usual ratio, at least forty thousand must have received wounds in action. Over thirteen thousand died of disease in the service, and more than twenty thousand were discharged on account of disability.

During the entire war the orderly movements of society were not interrupted, and, considering the withdrawal of so much available labor, the disturbance of productive industries was surprisingly small. There was a diminution of the acreage under cultivation, and of the produce of agriculture, but not at all in proportion to the numbers of laborers withdrawn to war. The product of manufacturing industries did not diminish even during the years of war, and during that decade it was doubled, showing the same proportional increase as during the previous decade. The increased population and the application of improved machinery had made up for the labor subtracted.

The public schools went on as regularly as in

times of peace. The churches continued their service of worship and moral training, and powerfully aided in the great work. The courts held their sessions uninterruptedly. Less than twenty arbitrary arrests under extreme provocation sum up the departure from that due process of law which is so dear and vital to a free people. The colleges and institutions of higher learning, though depleted by their contribution of teachers and students to the army, kept open their doors and carried forward their work term by term. All this, with the sacrifices made for a great cause, the concern felt for those afar off, and the remote consequences, the habitual contemplation and discussion of these great interests and themes, added depth and seriousness to the character of the people, that will be felt far into the future.

CHAPTER XV.

OHIO SINCE THE CIVIL WAR.

THE history of Ohio since the close of the Civil War has been that of a profound economic and social transformation difficult to conceive and still more difficult to describe except through the medium of bare statistics. In the first place the population, which in 1860 numbered 2,339,511, and covered the area of the state with a moderate density of 57 to the square mile, had increased by 1900 to 4,157,545, and raised the density of settlement to 102 to the mile. This alone meant a greater concentration in living, and entailed all the consequences of increased demands for land, for food and building materials, and for transportation. But mere increase in numbers was not the only cause of change, for the four millions of 1900 made their living in ways very different from those which prevailed forty years before. In the Ohio of 1860 agriculture was the great source of individual wealth, and grazing and wool growing came next; but in the Ohio of 1900 manufactures and mining overshadowed agriculture, steam and electric railways had invaded every corner of the state, and cities blackened

the air of nearly every county with their smoke. The typical "farmer" state of 1860 had become one of the leading industrial communities in North America. This mighty change seemed to progress visibly during the periods of prosperity; then, with financial depression, as in 1873-77 or 1893-96, to move more sluggishly; but whether fast or slow there was no turning back; by the census of 1900 it had become evident that the Ohio of the first half century was a vanished community.

In 1860 Ohio stood second in the amount of cereals raised, second in horses and cattle, and first in wool. Manufactures at that time employed only 75,000 men, in a total of 11,000 establishments with a capital of 57 millions, and most of these were limited to local and domestic markets. Cities were small, there being only six with over 8000 population, only three over 20,000, and only one, Cincinnati, over 100,000. In a population of two and a third millions only one ninth lived in cities; the farmer was the typical figure, dominating society and politics.

The decade containing the Civil War saw the beginning of the great change. In those years railways began to be pushed across the state with vigor, until by 1871 over three thousand miles were constructed. Simultaneously and partly as a result of the railway extension the coal measures of the eastern parts of the state began to be opened up; the iron of Pennsylvania, and later

of Lake Superior, began to be brought to meet the Ohio coal; and iron and steel manufacturing spread from city to city. All other manufactures felt the stimulus and rushed into production, the number of establishments doubling in a decade, the employees rising to 137,000, and the value of the output more than doubling. In the panic of 1873, this first over-enthusiastic rush of Ohio capital into railways and manufactures paid the penalty of too great optimism and too little caution. In that fatal year and during a long period of subsequent "hard times" railway earnings decreased, until bankruptcies followed, manufactures were idle or failed, and it seemed as if all industry had come to an indefinite suspension of activity. But from this relapse Ohio rose again with vigor in the years after 1878, and although hindered by another epoch of financial stringency after 1893, did not cease its progress nor experience any severe mishaps. Railways, coal, and iron gave the direction of development throughout.

A picturesque episode in the steady industrial development of the state came about in 1885 to 1888 through the dramatic discovery of natural gas in Hancock and Allen counties, which created a temporary craze for its use as fuel and led to the discovery of other supplies in many localities in western and central Ohio. For a time the apparently inexhaustible quantities of gas, and its free donation by enthusiastic and shortsighted municipalities to manufacturing plants, led to the

mushroom growth of cities in gas districts; but the rapid diminution of the gas supply after a brief ten years of activity showed that the new fuel was not destined to supplant coal or petroleum, and except for lighting and heating purposes its use was generally abandoned by the end of the century. The real prosperity of Ohio's manufactures rested on the coal measures.

By the opening of the twentieth century Ohio had become one of the leading manufacturing states in the Union, fifth as to the total value of its output, fourth in boots and shoes, second in iron and steel, first in clay products. Ohio manufactures were sent over the United States and exported through the civilized and uncivilized world. Over nine thousand miles of railway covered the state like a network, carrying the coal of the southeastern regions to every corner, and gathering the products of every city or solitary factory. The 75,000 employees of 1860 had increased to 345,000 in 1900, and the proportion of persons engaged in trade, transportation, and manufactures had grown from one third to nearly one half of the total number engaged in remunerative pursuits.

By the side of this great industrial development agriculture failed to hold its own. The staple crops, it is true, increased enormously, more than doubling in every branch since 1860; but while they doubled, manufactures had increased sevenfold, and in addition new agricultural and grazing

states had been opened up in the West which challenged Ohio's prominence. By 1900 Ohio was no longer second, but seventh, as a grain-producing state. Cattle-raising showed still more clearly the altered economic interests, for although for a time after the war flocks and herds continued to increase, there came sooner or later for all of them a stationary period and then retrogression. The sheep of 1900 were not so numerous as the sheep of 1870, the cattle, horses, and swine of 1900 showed a decline from ten years before, and wool, once the great staple of Ohio prosperity, fell off in quantity almost year by year. The competition of the extreme West and the new states of the plains, and the increasing returns from manufactures, had had their effect; the proportion of persons engaged in agriculture fell from 36 per cent. to 26 per cent. Ohio was no longer a farmer state.

The change in industrial interests showed itself unmistakably in the distribution of population. Of the two and a third millions of 1860 scarcely one ninth lived in cities, a lower proportion than held good in the United States as a whole; but of the four and a sixth millions of 1900 nearly two fifths were urban, a considerably higher proportion than the country at large had reached. In place of six cities only, with more than 8000 population, there were thirty-eight; in place of one over 100,000 there were four, and two of these, Cleveland and Cincinnati, were seventh and tenth

respectively among the cities of the land. Everywhere near mines, near points of railway concentration, near harbors on the shore of Lake Erie, — in all places where coal and iron could be brought together, cities had sprung up, crowded with factories black with soot and buzzing with machinery. On the other hand, the censuses from 1880 onward showed that while the state grew steadily in population, the corn-growing and sheep-raising counties stood still or declined. Their noon was past. Henceforward Ohio showed the same marks of economic maturity as her older sisters to the eastward, and looked forward to the twentieth century as destined to add continually to her wealth through manufacturing rather than agricultural growth.

The real history of Ohio is to be sought in the field of business, of manufactures, and of railways, for beside their great development the politics or public life of the state has been of slight moment. The interests of the men of the era since the Civil War have been mainly engrossed with the wonderful industrial expansion, and public affairs have had to adjust themselves to the altered situation. Governmentally the history of the state is conservative beyond precedent, since the Constitution of 1851, drawn up for a race of farmers, continued in operation throughout the century, — one of the very few in the country to exist for so long a time. In 1873-74 a constitutional convention, — led by many of Ohio's ablest and most practical men,

labored with great thoroughness to perfect a more modern instrument; but the conservative voters in the ill-temper of the year of hard times, 1874, rejected the draft by an overwhelming majority. Of amendments since attempted nearly all have failed, owing to the provision requiring a majority of votes cast at the election to secure ratification, the result being that the neglect to register an opinion was equivalent to a negative vote.

The conduct of the state administration has been of a similarly conservative character. The Civil War debt was reduced steadily to a merely nominal sum, and the receipts and expenses, in spite of the great growth of the state in wealth, have been steadily kept below the Civil War figures, except when another war in 1898 caused a temporary increase. While school and university funds have been maintained and enlarged, new fields of expenditure have not been sought, the policy of the state, in good democratic fashion, having been to leave them for the local units. Nor have these, it must be admitted, been slow to occupy the field, for local indebtedness, which as early as 1872 stood at 20 millions, had surpassed 50 millions thirty years later. At the height of the railway craze preceding the panic of 1873, the legislature passed an act authorizing counties and municipalities to build and operate railways, under whose terms no less than ninety towns bonded themselves for that purpose. The supreme court, however, intervened to declare the act un-

constitutional, thereby preventing a reckless speculation.

Legislation during the two generations after the Civil War centred about industrial and economic matters. Every session of the legislature — annual until 1895, but since then biennial, in tardy fulfillment of the purpose of the constitution of 1851 — was productive of bills concerning corporations, imposing restrictions and defining powers, and of acts adding to the supervisory and administrative powers of state and local officials. The existence of state commissioners of railways and telegraphs and of insurance, state inspectors of building and loan associations, of mines, of factories, of oils, and of foods, boards of examiners for medical, veterinary, and dental registration testified to the extent to which the state has been driven slowly to recognize new problems. The other interests of the state received increased attention with the increasing population and the growing complexity of modern industrial life. Asylums, hospitals, and penal institutions were subjects of continual legislation, hardly a session passed without alterations in the school laws, and during the whole of this period the amount of special municipal legislation grew in bulk year by year. The provision of the constitution forbidding special laws for municipal corporations was evaded by applying a system of classification which was subjected to continual subdivisions, until in its last estate nearly every one of the

larger cities of the state was the sole occupant of a class or grade, and hence the sole beneficiary of "general" legislation for that grade. This transparent device permitted unlimited legislative interference with city charters, offices, powers, and finances; but the whole scheme received a death-blow when in 1902 the state supreme court, nerving itself to reverse a long line of previous decisions, declared the classification system unconstitutional and forced the legislature to enact a general code, applicable in the words of the constitution to "cities and incorporated villages," and restricting "their power of taxation, assessment, borrowing money, contracting debts, and loaning their credit, so as to prevent the abuse of such power."

The action of the supreme court in this affair illustrates the general tendency in judicial history since the Civil War. For twenty years the Ohio judiciary adhered to a broad construction of the constitution and abstained as far as possible from decisions adverse to the validity of laws. Their attitude is shown by a case in 1877, when the supreme court practically disclaimed the power to decide whether an act was or was not local in character, holding that the legislature, confined by the constitution to general laws, was itself the judge as to whether any law it passed was general or not. But in the last fifteen years of the century a different spirit appeared; the court began to construe more strictly the provisions of the constitution,

and as a consequence to invalidate laws with considerable frequency. This involved the reversal of previous decisions, but the court did not flinch. In 1887, for instance, it asserted its right and duty, heretofore disclaimed, to declare a law invalid if not passed in due constitutional form. In 1896 it reasserted its right to judge of the general or local character of a law by its contents, upsetting a series of previous precedents, and in 1902, as has been mentioned, it struck down the whole system of municipal legislation. In 1895 and 1896 it even went so far as to declare laws void on the ground that they violated, not some specific clause of the constitution, but its general spirit. This increasing rigor of the Ohio judiciary failed to evoke any public disapproval, but tended rather to call forth applause; for it fell in with the growing popular desire to restrict legislation, and the increasing popular impatience with legislative interference with business. The court stood forward at the century's end as never before in the character of guardian of the fundamental law.

The large number of statutes overthrown by judicial decisions certainly indicates a reckless quality in Ohio legislation during the years succeeding the Civil War. Ohio law-making showed the same features as did that of other states,—an honest endeavor, in the main, to deal with new problems, hampered by a great deal of inexperience and shortsightedness on the part of the legislators, and varied by occasional jobbery and frequent

rank political partisanship. On the whole, however, the legislative and governmental activity of the state was not the subject of political contests or political interests. The votes and debates on nearly all measures have been without regard to party.

This situation did not prevent Ohio from being preëminent in the Union for the keenness of its party feeling and the warmth of its electoral struggles. This was due to several facts. In the first place the position of Ohio was such as to give it an importance in national politics since the Civil War equaled by scarcely any other state in the country. Not only did the numbers of its population give it weight in the electoral college, but its character, at once agricultural and increasingly industrial, made it the easternmost of the Western states and placed it at the meeting point of the political tendencies of the agricultural West and the manufacturing East. Further, the accidental fact that Ohio held its state election for governor the year before the presidential election, and in the presidential year cast its ballots for minor state offices in October, one month before the federal election, raised it to the importance of a political weather-gauge. The vote in Ohio was supposed to indicate conclusively the tendencies in the Union at large, and the result was that the two great political parties concentrated their efforts upon the Ohio elections to an unequaled degree. After twenty years of this

extreme pressure the voters of the state sought relief by changing the election day to November, but although the state fortunately lost the character of weather-gauge its real political weight was undiminished.

The result of this political prominence has been the existence of two very bitterly opposed party organizations in the state, struggling at every election with never fading rancor. For about eighteen years, from 1865 to 1893, their relations remained fairly constant. The Republicans controlled the larger maximum vote, and in presidential elections could be reasonably sure of success; but the Democrats, in "off years" or on local issues, ran a chance of occasionally electing governors, carrying legislatures, and choosing United States senators. During these eighteen years the Democratic party was a "hard times party," almost invariably winning in years of depression, as 1873, 1874, 1877, 1883, and 1889, and as invariably being decisively beaten in years of agricultural and industrial prosperity. During the entire period the party representing the aspirations of a farming community manifested a tendency to denounce capitalists and to advocate currency expansion. From 1868 to 1876 its demand for paper money and taxation of government bonds was so consistent that the inflation movement was commonly known as "the Ohio idea." After that the party became an adherent first of bimetallism and later of free silver coinage, a position it main-

tained into the twentieth century. The Republicans, no less dependent at first upon an agricultural constituency, but at the same time bound by the ties of party to a conservative Eastern wing, showed a tendency to vacillate and advocate half-way measures; but while anxious at all times to attract inflationist votes, they remained always more cautious than their Democratic rivals. On the tariff both parties occupied for years a moderate position, the Democrats advocating low duties, the Republicans a revenue tariff with incidental protection. Later, as the manufacturing interests of the state grew into importance, the Republicans became more decided in favor of protection, and at the same time appealed for rural support by a vigorous advocacy of high duties on wool. Finally, in the last decade of the century the two parties came to join issue squarely, the Democrats adhering to their demands for free coinage and a low tariff, while the Republicans, shifting with the altered interests of the state, grew steadily firmer in opposition to silver inflation and increasingly vigorous in advocacy of protection. The results of this change showed that the new economic development of the state had worked to the profit of the Republicans. The Democrats, beaten in 1893 during a panic year, failed to recover as on previous occasions, and steadily remained for the next ten years in a hopeless minority. The industrial development of Ohio had apparently brought about a permanent change in the balance of political parties.

The importance of Ohio in the electoral college, and its character as Western state and political weather-gauge, led the Republican party to nominate presidential candidates with a special view to gaining the Ohio vote by calling forth state pride, — the upshot being that Ohio contributed, after the Civil War, no less than five presidents. Grant and Harrison were born in Ohio, although not residents of the state at the time of their election, and Hayes, Garfield, and McKinley were active political leaders there. In fact, Ohio seemed to have taken the place once held by Virginia as the “mother of presidents.” But Ohio’s place in federal politics was by no means a mere accident of locality and population, for no state furnished a greater number of real political leaders during the years after the Civil War, men whose actual abilities made them prominent in Senate, House, Cabinet, and judiciary. To mention only the few most eminent names, there were among Republican senators Wade and Sherman, both men of the first order, the latter having served also with brilliant success as Secretary of the Treasury, and among the Democratic senators, Thurman and Pendleton. In the House of Representatives, it is enough to name Garfield and McKinley, each of whom, after long service, attained the presidency. In the Cabinet a long list of able men, from Stanton, Secretary of War during the Reconstruction period, and Cox in Grant’s first Cabinet, to W. R. Day, Secretary of State at the end of

the century, showed the political weight of Ohio, while in the Supreme Court three associate justices and two chief justices, Chase and Waite, indicated Ohio's impress on the judicial department. With such men as these guiding national affairs it is not too much to say that the real political history of Ohio is to be sought in the domain of the federal government since the Civil War.

Owing to the predominance of national or purely partisan issues, the details of party fluctuations in Ohio are not a vital part of the development of the state. Bitter as party feeling was it seldom concerned state policy as such, but centred on matters connected with federal politics. In 1867, for instance, in the height of the Reconstruction struggle, the Democrats carried the legislature, rejected the fifteenth amendment, and attempted to rescind the ratification by the state of the fourteenth amendment. In the bitterness of the contest, they also tried to mark their opposition to negro suffrage by passing the famous "visible admixture" law, designed to render impossible the voting of mulattoes in Ohio, but this was declared unconstitutional by the Supreme Court and repealed by the next legislature. Another frequent source of angry struggles was the districting of the state for congressional elections. Each party passed acts, or repealed acts passed by the other party, with the express purpose of "gerrymandering" the state, on several occasions. At times the senatorial elections also resulted in partisan

wrangling. In 1886, the Republicans, who controlled the House, unseated ten Democrats, which led the Democrats, who held a precarious majority in the Senate, and felt their chances uncertain, to attempt the device of preventing an election by breaking a quorum. The Democratic senators not only left the Capitol, but abandoned the state, hoping in this way to block all action, but the Republican senators admitted four contestants, secured a quorum, and triumphantly reelected Sherman.

Apart from such struggles, arising from the connection of state with national politics, the principal local issue which has disturbed Ohio has been the temperance question. In 1874 this suddenly assumed importance through the outbreak of a woman's crusade, carried on vigorously by singing and praying, for a number of months, until the impetus finally wore out. From this time a steady growth developed, principally in the country districts, of sentiment favorable to the enactment of prohibitory or restrictive laws. In 1882 the matter became a party issue through the action of a Republican legislature in passing a liquor tax act. This was declared unconstitutional the same year, but the German vote in alarm swung to the Democratic side. The next year the legislature enacted the "Scott law," intended to regulate liquor-selling and bring in a revenue. This was at first held constitutional by the court, but in 1884 it was declared partly unconstitutional, leaving the

Republican programme in confusion. The Democrats had profited by the situation to carry the legislature in 1883, and for two years no legislation was attempted. In 1885, however, the "Scott law" having been finally wiped out by the courts, the two parties divided squarely on the liquor question, the Republicans adhering to a tax scheme, the Democrats calling for a constitutional amendment, — notoriously difficult of attainment, — but this time the Republicans won, passed the "Dow law," which ran the gauntlet of the courts in safety, and so ended the controversy.

Party struggles were obscured when, at the century's end, Ohio was called upon for the first time in two generations to contribute men for the defense of the country. When President McKinley issued his call for volunteers in the war with Spain, on April 25, 1898, the National Guard of Ohio had been to a considerable extent prepared for the emergency by the administration of Governor Bushnell, and the Ohio regiments entered the federal service, keeping their organizations as a rule unchanged. Two of them served in Cuba, one, the 8th, being among those transported to Montauk Point after the tropical heat had threatened to decimate their ranks. Another regiment, the 4th, served in Porto Rico, and escaped with less serious consequences than those experienced by its fellows in Cuba. In all no less than 237 men lost their lives during the bloodless service of these volunteer regiments, 72 of them from the

8th regiment in Cuba, 45 from the other two regiments which saw service, and the rest in the disease-stricken camps on the mainland.

Ohio's share in this brief war was certainly creditable to the patriotism of the people, and still more to the efficiency of the state administration. But the war excitement arose and blew over like a thunder-squall in July, and the state returned to its normal life of peaceful industry, showing scarcely any effects from the brief period of tension.

The twentieth century opened for Ohio a long prospect of industrial progress and prosperity. True, the state had not solved all problems, — educational unity was by no means attained, tax reform continued to be vigorously demanded, municipal organization and corporation regulation were by no means to the satisfaction of all individuals; but the people of the state were themselves the assailants of the state's weak points and the agitators for reforms. The state in its transition from an agricultural to a manufacturing community had retained the traditions of an active public life, and added to the rural simplicity of former days the keen desire for material perfection which develops in a prosperous industrial society. No commonwealth in the Union commanded a fairer prospect or could face the future with greater confidence than Ohio, "the first fruits of the Ordinance of 1787," on the completion of its centennial as a state.

APPENDIX.

APPENDIX No. I.

(See pp. 101, 102.)

EXTRACTS FROM THE TREATY OF PARIS AND THE KING'S PROCLAMATION IN 1763.

I.

TREATY OF PARIS. "*Article 4.* His Most Christian Majesty (France) cedes and guarantees to his Britannic Majesty, in full right, Canada with all its dependencies. His Britannic Majesty, on his side, agrees to grant the liberty of the Catholic religion to the inhabitants of Canada; he will consequently give the most precise and the most effectual orders that his new Roman Catholic subjects may profess the worship of their religion according to the rites of the Romish Church, as far as the laws of Great Britain permit. His Britannic Majesty further agrees that the French inhabitants or others who had been subject to the Most Christian King, in Canada, may retire with all safety and freedom wherever they shall think proper; the term limited for this emigration shall be fixed to the space of eighteen months from the exchange of ratifications of this treaty.

"*Article 7.* In order to reëstablish peace on solid foundations, and to remove forever all subject of dispute

with regard to the limits of the British and French territories on the continent of America, it is agreed that for the future the confines between the dominions of his Britannic Majesty and those of his Most Christian Majesty in that part of the world shall be fixed, irrevocably, by a line drawn along the middle of the river Mississippi from its source to the river Iberville, and from thence by a line drawn along the middle of this river and the lakes Maurepas and Pontchartrain to the sea. . . . Provided that the navigation of the river Mississippi shall be equally free as well to the subjects of Great Britain as to those of France in its whole breadth and length from its source to the sea. *The stipulations inserted in the 4th Article in favor of the inhabitants of Canada shall also take place with regard to the inhabitants of the countries ceded by this article."*

THE KING'S PROCLAMATION, October 7, 1763, "taking into consideration the extensive and valuable acquisition in America secured to the crown by the late definitive treaty of peace concluded at Paris, February 10, 1763," declared and established three new governments, styled Quebec, East Florida, and West Florida. After describing the bounds of each of these governments, and the powers and duties of their governors and authorities, the proclamation proceeded to deal with the Western territory in the following terms, literally as set forth in its text: —

"And whereas it is just and reasonable, and essential to Our Interest and the Security of Our Colonies, that the several Nations or Tribes of Indians with whom We are connected, and who live under Our Protection, should not be molested or disturbed in the Possession of such Parts of

Our Dominions and Territories as not having been ceded to or purchased by Us, are reserved to them or any of them as their Hunting Grounds, We do therefore, with the Advice of Our Privy Council, declare it to be Our Royal Will and Pleasure, that no Governor or Commander in Chief in any of Our Colonies of Quebeck, East Florida, or West Florida, do presume, upon any Pretence whatever, to grant Warrants of Survey, or pass any Patents for Lands beyond the Bounds of their respective Governments, as described in their Commission; as also that no Governor or Commander in Chief in any of Our other Colonies or Plantations in America do presume for the present, and until Our further Pleasure be known, to grant Warrant of Survey, or pass Patents for any Lands beyond the Heads or Sources of any of the Rivers which fall into the Atlantick Ocean from the West and North-West; or upon any Lands whatever which, not having been ceded to or purchased by Us as aforesaid, are reserved to the said Indians, or any of them.

“And we do further declare it to be Our Royal Will and Pleasure, for the Present as aforesaid, to reserve under Our Sovereignty, Protection, and Dominion, for the Use of the said Indians, all the Lands and Territories not included within the Limits of Our said Three new Governments, or within the Limits of the Territory granted to the Hudson’s Bay Company; as also all the Lands and Territories lying to the Westward of the Sources of the Rivers which fall into the Sea from the West and North-West as aforesaid; and We do hereby strictly forbid, on Pain of Our Displeasure, all Our loving Subjects from making any Purchases or Settlements whatever, or taking Possession of any of the Lands above reserved, without Our especial Leave and Licence for that Purpose first obtained.

“And We do further strictly enjoyn and require all Persons whatever, who have either wilfully or inadvertently seated themselves upon any Lands within the Countries above described, or upon any other Lands which, not having been ceded to or purchased by Us, are still reserved to the

said Indians as aforesaid, forthwith to remove themselves from such settlements."

GENERAL GAGE'S PROCLAMATION ON DECEMBER 30, 1764. "His Majesty grants to the inhabitants of the Illinois the liberty of the Catholic religion as it has already been granted to his subjects in Canada. He has consequently given the most precise and effective orders to the end that his new Roman Catholic subjects of the Illinois may exercise the worship of their religion according to the rites of the Romish Church in the same manner as in Canada.

"His Majesty, moreover, agrees that the French inhabitants, or others who may have been subjects of the Most Christian King, may retire in full safety and freedom wherever they please. Those who choose to retain their lands and become subjects of his Majesty shall enjoy the same rights and privileges, the same security for their persons and effects, and the liberty of trade, as the old subjects of the King."

APPENDIX No. II.

(See pp. 161-189.)

MR. DANE'S statements as to the authorship of the Ordinance of 1787, though of the highest authority, have been almost inaccessible and therefore overlooked. To supply the want in some degree, they are here annexed.

I.

In a letter to Rufus King, July 16, 1787, three days after the Ordinance was passed, he said: —

"When I drew the Ordinance (which passed, a few words excepted, as I originally formed it) I had no idea the states

would agree to the sixth article, prohibiting slavery, as only Massachusetts of the Eastern States was present, and therefore omitted it in the draft. But finding the House favorably disposed on this subject, after we had completed the other parts, I moved this article, which was agreed to without opposition."

II.

Later in life Mr. Dane compiled a work in nine volumes, known as "Dane's Abridgment," being a general abridgment or digest of the laws of all the states. The volumes were published from year to year as they were completed, and are now almost out of print.

In the seventh volume, issued in 1824, he referred (page 389) to the Ordinance of 1787 in connection with Massachusetts law, and incidentally said: "This Ordinance, formed by the author of this work, was framed mainly from the laws of Massachusetts, especially in regard to land titles, and as to them contains the following clauses," etc.

III.

But in his ninth volume, published in the year 1830, and after the great debates in the Senate on Foote's resolutions, Mr. Dane, evidently disturbed by the versions put upon the Ordinance by Senators Benton and Hayne, became more explicit, and in an appendix added the following note (Appendix, pp. 74-76), which is given entire:—

"As, after the lapse of 43 years, some for the first time claim the Ordinance of July 13, 1787, as a Virginia production, in substance Mr. Jefferson's, it is material to compare it with his plan or resolve (not ordinance) of April, 1784, in order to show how very groundless the assertion of Senator B. is, that the Ordinance of '87 was 'chiefly copied' from

his plan. To those who make the comparison, not a word need be said to refute his assertion ; on the face of them the difference is so visible and essential. But thousands read his speeches, extensively published, where one makes this comparison. It is surprising, at this late day, that this claim is made for Virginia, never made by herself.

“ As but few possess the journals of the old Congress in which Mr. Jefferson’s plan of ’84 and the Ordinance of ’87, formed by the author, are recorded, it is proper here concisely to point out the material difference between them. — I. The plan of ’84 is contained in two pages and a half ; the Ordinance of ’87 in eight pages. II. The first page in the plan or resolve of ’84 is entirely omitted in the Ordinance of ’87. III. From the remaining page and a half of the plan there appears to be transferred to the Ordinance in substance these provisions, to wit : 1st. ‘ The said territory, and the states which may be formed therein, shall forever remain a part of this confederacy of the United States of America, subject to the Articles of Confederation.’ 2d. ‘ To all the acts and ordinances of the United States in Congress assembled, conformable thereto.’ 3d. ‘ The inhabitants and the settlers in the said territory shall be subject to pay their part of the federal debts contracted or to be contracted, to be apportioned on them by Congress according to the same common rule and measure by which apportionments thereof shall be made on the other states.’ 4th. ‘ The legislature of those districts or new states shall never interfere with the primary disposal of the soil by the United States in Congress assembled ; nor with any regulations Congress may find necessary for securing the title to such soil to the *bonâ fide* purchasers.’ 5th. ‘ No tax shall be imposed on lands the property of the United States.’ 6th. ‘ And in no case shall non-resident proprietors be taxed higher than residents.’

“ It will be observed the provisions 4, 5, and 6, which some now view as oppressive to the West, were taken from Mr. Jefferson’s plan. . . . The residue of the Ordinance of ’87

consists of two descriptions, one original, as the provisions to prevent legislature enacting laws to impair contracts previously made, — to secure to the Indians their rights and property, — part of the titles to property made more purely republican, and more completely divested of feudality than any other titles in the Union were, in July, 1787. The temporary organization was new ; no part of it was in the plan of '84. The other description was selected mainly from the Constitution and laws of Massachusetts, as any one may see who knows what American law was in '87 ; as, I. Titles to property by will, by deed, by descent, and by delivery, cited verbatim in the seventh volume of this abridgment, pages 389, 390. Here it may be observed that titles to lands once taking root are important, as they are usually permanent. In this case they were planted in 400,000 square miles of territory, and took root as was intended. II. All the fundamental, perpetual articles of compact (except as below), — 1st. Securing forever religious liberty ; 2d. The essential parts of a bill of rights declaring that 'religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged.' These selections from the code of Massachusetts, as also the titles to property, have created for her an extensive and lasting influence in the West, and of the most republican, liberal, and beneficial kind.

“ The organization, providing officers to select or make, to decide on and execute laws, being temporary, was not deemed an important part of the Ordinance of '87. Charles Pinckney assisted in striking out a part of this in 1786.

“ The 6th article of compact, the slave article, is imperfectly understood. Its history is, that in 1784 a committee, consisting of Mr. Jefferson, Mr. Chase, and Mr. Howell, reported it as a part of the plan of 1784. This Congress struck out ; only two members south of Pennsylvania supported it ; all north of Maryland present voted to preserve it, so to exclude slavery. It was imperfect, first, as it admitted slavery till the year 1800 ; second, it admitted

slavery in very considerable parts of the Territory forever, as will appear on a critical examination, especially in the parts owned for ages by French, Canadian, and other inhabitants, as their property, provided for only in the Ordinance of '87. In this Ordinance of '87 slavery is excluded from the date and forever from every part of the whole 'territory of the United States northwest of the river Ohio,' over all which the Ordinance established government.

"The amended slave article, as it is in the Ordinance of '87, was added on the author's motion, but, as the journals show, was not so reported.

"In the said seventh volume published in 1824 full credit is given to Mr. Jefferson and Mr. King on account of their slave article (too limited), amended in July, '87, by extending the Ordinance of that date, and the slave article in it, over the whole territory, and to take effect from the date. In 1802 the Indian article was made a fundamental part of a Southern compact. The provision as to impairing contracts was afterwards adopted into the Constitution of the United States, also into the several state constitutions, and after forty years' experience into that of Virginia.

"In the great Missouri debate in 1820, etc., one Southern member, at least, viewed this Ordinance as a Northern usurpation; especially as to the six articles of compact. Mr. B. in 1830 claims it as an honor to Virginia and Mr. Jefferson. Colonel Carrington, of Virginia, as chairman of the committee *pro forma*, reported the Ordinance, but formed no part of it. Of late years this Ordinance has been made a subject of particular importance as proving the authors of it have afforded essential means in promoting the prosperity and rapid growth of the West. It was found in the great Missouri debate that the Southern attempt to run it down would not do. As a Western senator said in that debate in Congress, it had been the cloud by day and a pillar of fire by night in settling the country; others to the same purpose. On this and some other discoveries, this Northern usurpation, as Charles Pinckney viewed it, is now claimed

as a Southern production to prove Southern friendship to the West; also to prove, even in '87, the East did nothing in building up the West. In this point of view the East will not readily yield its just claim in that business,—a claim not denied for forty years and more.

“On the whole, if there be any praise or any blame in this Ordinance, especially in the titles to property and in the permanent parts, the most important of it belongs to Massachusetts, as one of her members formed it and furnished the matter with the exceptions following: First, he was assisted in the committee of '86, in the temporary organization, almost solely by Mr. C. Pinckney, who did so little he felt himself at liberty to condemn this Ordinance in that debate. Secondly, the author took from Mr. Jefferson's resolve of '84 in substance the said six provisions in the fourth article of compact, as above stated. Thirdly, he took the words of the slave article from Mr. King's motion made in 1785, and extended its operation as to time and extent of territory, as is above mentioned: as to matter, he furnished the provisions respecting impairing contracts, and the Indian security and some other smaller matters; the residue, no doubt, he selected from existing laws, etc. In regard to the matter of this note, it is a portion of American law properly and conveniently placed in this appendix. The particular form of this note is in answer to many requests lately made, by members of Congress and others, to be informed respecting the formation, the detail, and authorship of this Ordinance, which in forty years has so often restrained insolvent acts, stop laws, and other improper legislation impairing contracts.”

APPENDIX No. III.

(See pp. 244–247.)

THE following ballad is not poetry, but in the time of the pioneers was sung with sad emotion, and was so popular that it is worth reproducing as a relic:—

SAINCLAIRE'S DEFEAT.

'Twas November the fourth, in the year of ninety-one,
We had a sore engagement near to Fort Jefferson ;
Sainclair was our commander, which may remembered be,
For there we left nine hundred men in t' West'n Ter'tory.

At Bunker's Hill and Quebeck, there many a hero fell,
Likewise at Long Island (it is I the truth can tell),
But such a dreadful carnage may I never see again
As hap'ned near St. Mary's, upon the river plain.

Our army was attacked just as the day did dawn,
And soon were overpowered and driven from the lawn.
They killed Major Ouldham, Levin and Briggs likewise,
And horrid yells of sav'ges resounded through the skies.

Major Butler was wounded the very second fire ;
His manly bosom swell'd with rage when forc'd to retire ;
And as he lay in anguish, nor scarcely could he see,
Exclaim'd, " Ye hounds of hell ! Oh revenged I will be."

We had not been long broken when General Butler found
Himself so badly wounded, was forced to quit the ground ;
" My God ! " says he, " what shall we do ? we're wounded
every man ;
Go charge them, valiant heroes, and beat them if you can."

He leaned his back against a tree, and there resigned his
breath,

And like a valiant soldier sunk in the arms of death ;
When blessed angels did await his spirit to convey,
And unto the celestial fields he quickly bent his way.

We charg'd again with courage firm, but soon again gave
ground ;
The war-whoop then redoubled, as did the foes around.

They killed Major Ferguson; which caused his men to cry,
“Our only safety is in flight, or fighting here to die.”

“Stand to your guns,” says valiant Ford; “let’s die upon
them here,

Before we let the sav’ges know we ever harbored fear !”
Our cannon-balls exhausted, and artill’ry-men all slain,
Obliged were our musketmen the en’m’y to sustain.

Yet three hours more we fought them, and then were forc’d
to yield,

When three hundred warriors lay stretched upon the field.
Says Colonel Gibson to his men, “My boys, be not dis-
mayed ;

I’m sure that true Virginians were never yet afraid.

“Ten thousand deaths I’d rather die than they should gain
the field !”

With that he got a fatal shot, which caused him to yield.
Says Major Clarke, “My heroes, I can here no longer stand ;
We’ll strive to form in order, and retreat the best we can.”

The word “Retreat !” being passed around, there was a
dismal cry,

Then helter-skelter through the woods like wolves and sheep
they fly.

This well-appointed army, who but a day before
Defied and braved all danger, had like a cloud passed o’er.

Alas, the dying and wounded, how dreadful was the thought !
To the tomahawk and scalping-knife in mis’ry are brought.
Some had a thigh and some an arm broke on the field that
day,

Who writhed in torments at the stake to close the dire af-
fray.

To mention our brave officers, is what I wish to do ;
No sons of Mars e'er fought more brave, or with more courage true.

To Captain Bradford I belonged, in his artillery,
He fell that day amongst the slain, a valiant man was he.

APPENDIX No. IV.

(See p. 333.)

THE following letter of General William H. Harrison, heretofore unpublished, contains facts of much historical interest, particularly his tribute to Colonel Wood. It was written during the excited political canvass in which General Harrison and Mr. Van Buren were the opposing candidates for the Presidency.

NORTH BEND, July 2, 1840.

HON. THOMAS CORWIN.

MY DEAR SIR : Colonel Pendleton forwarded to me by yesterday's mail your letter to him of the 25th ult. General Solomon Van Rensselaer wrote a reply to Armstrong's book in which the general character of the work is portrayed with great ability and the lash most unmercifully applied. As it regards particulars, however, he only goes to the defense of the operations on the Niagara frontier ; that is to say, as far as his relation (the Patroon) and himself were concerned. I should have answered it myself, but a friend in New York advised against it, as the work had fallen dead from the press. Indeed, I consider that the work, as far as it regarded my conduct, was sufficiently answered by the documents to be found in McAfee's history of the war and in Dawson's work. In both of these the opinions of Colonel Wood in favor of my whole course are quoted. And his opinion, in the estimation of every officer who served in that war, would have more weight than fifty Armstrongs. I heard both General Brown and General Scott say that they thought

Wood the greatest military character that the late war brought forth. Colonel Pendleton, who was the *aide-de-camp* of General Gaines, informed me that such was the opinion of that officer, and it was always decidedly mine. Wood was with me from the commencement to the end of the operations in the Northwest, and kept a journal in which he made comments upon the military movements which he witnessed. After the campaign of 1813, I gave him a furlough for a few weeks to visit his friends in the N. E. part of New York. There he copied the journal and deposited it in the library at West Point where he had been educated. This copy was borrowed by Colonel Charles Todd for the use of McAfee in writing the history of the war. It was intrusted by Todd to an officer, who promised to restore it to the West Point library, which it is supposed he did not do. In the following year, however, Wood's brother, knowing the attachment which the colonel had for me, came from his residence on Lake Champlain to visit me. He brought with him the original rough journal of Wood, and presented it to me. This (to me) precious document is now in my possession. I think, however, that the parts of it necessary to my defence against Armstrong are quoted by McAfee and copied by Dawson.

The principal features in the campaign of 1812-13 are the general arrangements for the campaign, the distribution of the corps of the army for the advance to a point of concentration, and the measures taken previous and subsequent to the defeat at the river Raisin. On each of these Wood has expressed a decided opinion. In speaking of the latter (river Raisin) it will be seen that he says in the most decisive manner that nothing more could be done than was done. The points in the campaign of 1813 that deserve particular notice are, the general arrangements for the protection of the frontiers and the preparations for the final advance of the army, the first and second sieges of Fort Meigs, the attack on Fort Stephenson (Lower Sandusky), the general order for forming the army for march and battle, and the battle

itself (on the Thames). I believe that Wood has given a distinct opinion upon each. It was upon the report made to me by him that an entire change was made in the order of battle at the very moment when it was about to be commenced in a way entirely different. I had previously understood the exact position of the enemy, from the reports of the volunteer officers. But having sent Wood to ascertain the extent of front occupied by the British troops, his military eye at once discovered what the others had neglected to notice, that is, the open order in which they were drawn up. It was on this report, which I could only credit coming from such a man as Wood, that I immediately changed the plan of the action, which drew forth the encomium of Perry, who witnessed the whole transaction.

Now it does appear to me that the opinion of Wood should outweigh, eye-witness as he was, those of fifty men who were not present. Governor Shelby and Commodore Perry have also given a most favorable opinion both of the general arrangements and the particular order of battle. The former says that the latter gave such confidence to the army that it could not have been defeated by more than double its numbers. Wood says of it, that, although it was a violation of long-established rules of war, yet he justifies it by saying in the most complimentary way that those and those only who perfectly understand their profession are authorized to depart from these rules. . . .

Yours in haste, but very truly,

W. H. HARRISON.

APPENDIX No. V.

THE following paper on the gradual failure of the grape in Ohio is from one whose long experience in vine culture and in making the native wines, sparkling and still, give him the highest authority on this interesting subject : —

THE GRAPE AND ITS GRADUAL FAILURE IN OHIO.

Culture at one time promised the State of Ohio, for a series of years, a large revenue in the production of grapes, but this prospect did not last for many years. It is about fifty-five years since this noble culture was introduced by Mr. Nicholas Longworth on a large scale. Mr. Longworth was a large owner of land near the city of Cincinnati, and a great amateur of the culture of the grapevine. About the time stated above, he began to lease out to vine-culturists a certain number of acres of land, in which the vine-culturist had to put a given number of acres into grapevines, with the condition that a half of the grapes so produced were to be delivered to Mr. Longworth's wine-cellars, as the consideration or rent for the land. In this way the culture of grapes was introduced at once in the southern part of this state. The grapes selected by Mr. Longworth, among the limited variety at that time, were the Catawba and Isabella; the former being an excellent grape for table-use as well as wine-making. History tells us that this Catawba grape was first introduced by Mr. John Adlum, of Georgetown, District of Columbia, sixty-three years ago, and taken up by Mr. Longworth in thus recommending it to his vine-dressers. He recommended both the Catawba and the Isabella, but the former took the lead, and the latter disappeared as a vineyard plant, being more subject to the grape diseases than the Catawba. This noble and excellent grape was cultivated with great success for years. The average yield was about one hundred and twenty bushels per acre of grapes, which, at fifty pounds per bushel, was equal to five hundred gallons of rich must, containing in a favorable season from ninety to one hundred degrees of sac-

charine, with a delicate flavor and a fine fruity acid, so well adapted for the production of sparkling wines.

This noble and so much desired grape cannot be produced any more in a paying way in the southern part of the state, on account of the sudden changes of temperature, which are owing, as it is generally thought, to the clearing out of the forests. It is about thirty years since the grape-crop began to fail by degrees. Persons for a long time engaged in this culture, the close and less close observers, agree that heavy fogs, wet atmosphere, changes from warm to cold, without wind, are the causes of our different grape diseases. These observations coincide with the writing of Dr. Hales on plants in general. He says: "When the plant has taken up a maximum of moisture, and the evaporation is suppressed by a low temperature, or by continued wet weather, the supply of food, the nutrition of the plant, ceases, the juices stagnate and are altered; they now pass into a state in which they become a fertile soil for microscopic plants. When rain falls after hot weather, and is followed by an atmosphere saturated with moisture, the cooling due to further evaporation ceases, and the plants are destroyed by fire-blast or scorching (in German *Sonnenbrand*, literally sun-burn or sun-blight)."

If grapevines are surrounded by any of the causes here mentioned, without wind, then the plants and fruits are subject to our different known grape diseases; but each of these diseases, as the growth advances during the season, appears in a different form, and any of them under favorable circumstances will destroy a rich crop of grapes in part or entirely in a few days.

In the northern part of the state, near a large body of water like Lake Erie, land situated immediately on its

shores or on the islands, like Kelley's, Put-in Bay, Middle Bass, etc., the grape culture has a little better success than in the southern part, on account of the temperature being more even and the winds more frequent. As proof of the above observations, we might cite California. Along the coasts of the Pacific Ocean, where the climate is dry and no rain falls for months during the growing season, the absorbing power being always in action through the dryness of the atmosphere, the even temperature is undoubtedly the reason of the success of grape culture in that country.

INDEX.

- ADAMS, John Quincy, quoted, 309.
 Albemarle, Lord, British minister in Paris, 69.
 Algonquins, in war with the Iroquois, 34.
 Andastes, conquered by the Five Nations, 22, 23, 39.
 Anemacrao, great chief of the Iroquois, 22, 36.
 Anthony, Indian convert of the Moravians, 124.

- Zinzendorf, Count, bishop of the Moravians, 122.

The American Commonwealths Series

The books which form this noteworthy Series are not only scholarly histories of the separate States, but constitute also a group of readable and interesting narratives of our national life.

The Series when complete will present, in a set of compact, well-written, and well-made books, an account of the nation by States. It will set forth in lucid and vigorous style the varieties of government and of social life to be found within this federation of English-speaking commonwealths.

The books are printed in a clear type and are bound in an attractive library binding.

The scope of the Series is well described by George Willis Cooke, who says:—

“These books are not mere State Histories; they are something much more and very much better than that. They embody what is most distinct and peculiar in the political life and history of each State, and show how that has contributed to the development of the whole. The widespread interest awakened in the past of our nation will find much to satisfy it in these volumes, for the design is original and the execution excellent.”

The latest volume in the Commonwealths Series

TEXAS

By George P. Garrison. With map and facsimile letter.
16mo, \$1.10 *net*. Postage extra.

Professor Garrison of the University of Texas adds to the American Commonwealths Series the volume on the great Lone Star State, and gives a fascinating account of the stirring events which have marked Texan history. In the first part of the book he explains how Texas first emerged into history as the territory where Spanish expansion and French overlapped, and how the Spanish prevailed; in the next he shows how the Anglo-Americans

were attracted to the land, and how after possessing it they were led to tear it away from Mexico and pass it over with themselves to the United States; and in the third part he shows how Texas, through education, the decay of its particularism, the development of its resources, and the working of influences from without, has become what it is to-day.
